Pakistan is rich in the potentialities for the development of horticulture, fruit and vegetable preservation. To place this industry on a sound footing, the Fruit Products Control Order was issued and an Inspectorate has been set up to inspect the factories and to give necessary assistance and guidance to the industry. To ensure that the products are manufactured under hygienic conditions, the Inspectorate constantly check samples some of which are examined at the Fruit Technological Laboratory, Lyallpur.

The Statistical Directorate, Ministry of Food, Agriculture and Health has organised crop forecast work on a sound basis. It now issues regular forecasts for the benefit of commercial interests in respect of as many as thirteen principal crops grown in Pakistan, such as rice, wheat, barley, gram, cotton, jute, etc. Statistics of the area and yield of the different principal crops have also been compiled on all Pakistan basis for the years 1941-42 to 1948-49.

The Directorate has also arranged to collect information regularly regarding the prices of agricultural commodities, containing over 100 quotations relating to as many as 26 commodities, and is circulated to all the Ministries, Provincial Governments and Pakistan Embassies in foreign countries. In addition to this, a fortnightly All Pakistan Agricultural Index of the wholesale prices of the principal food and agricultural

commodities is being issued. It also assists the Government in the consideration of important policy questions, and also tenders expert advice on questions relating to price stabilisation, sterling balances, etc.

Great importance is attached by the Government to agricultural development schemes to be completely financed by the Centre. These schemes (twenty-six in number) cover agricultural research and development, plant protection, co-operation and marketing, fisheries, forests and animal husbandry. Priority is given to research and technical training.

Most of these schemes are expected to be completed by 1954. The total cost of the schemes is estimated to be approximately Rs. 2.71 crores, whereas the cost in the next two years, 1950-51 and 1952-53 is expected to be about Rs. 1.56 crores. Out of this over Rs. 22 lakhs is to be spent on research and training schemes. These include schemes for the establishment of an Institute of Development Research on herbs, drugs, etc., a Central Institute of Agricultural Research, Agricultural Engineering and Tractor Technology Institute, Central Fruit Technological Institute, Soil Conservation Research Institute, Forest Research Institute, Forests Products Laboratory, Animal Husbandry Research Institute, Fisheries Department and Laboratory, and sending scholars abroad for training in fisheries. Almost all of these are expected to be completed in two years. The schemes further include horticultural development, setting up of a fish market at West Wharf (Karachi) and running of fish trawlers, a qualitative cattle census, breeding of cattle and poultry, establishment of wool-washing, shearing and grading centres, eradication of rinderpest, etc.

Besides the above schemes the Centre will also be responsible for the financing of Baluchistan's agricultural development schemes, for Baluchistan under the existing constitutional arrangement is the exclusive responsibility of the Centre. The Baluchistan agricultural development plan covers about seven schemes. These include distribution of improved variety of seeds, establishment of central and district farms, forest and soil conservation, introduction of machinery in agriculture, pest protection and minor irrigation like sinking of wells. The total cost of these schemes is estimated to be about Rs. 54 lakhs and almost all the schemes will be completed in two years.

SOME STATISTICS

The classification of areas in different provinces is as follows :—

(In millions of acres)

| Province or State | Forests | Not available for cultivation | Culturable waste other than Fallow | Current Fallows | Net Area Sown | Total Area |
|--------------------------------|---------|-------------------------------|------------------------------------|-----------------|---------------|------------|
| East Bengal (1940-41) | 3.0 | 5.7 | 3.0 | 2.4 | 15.7 | 29.8 |
| Sylhet Dist. (1940-41) | .2 | .3 | .7 | .2 | 1.7 | 3.1 |
| East Pakistan | 3.2 | 6.0 | 3.7 | 2.6 | 17.4 | 32.0 |
| West Punjab (1943-44) | 1.2 | 6.8 | 10.5 | 2.1 | 16.6 | 37.2 |
| N.-W.F.P. (1937-38) | .4 | 2.7 | 2.9 | .6 | 2.1 | 8.7 |
| Sind (1944-45) | .7 | 13.4 | 5.2 | 5.2 | 5.6 | 30.1 |
| Bahawalpur (1938-39) | .. | .9 | 1.3 | .3 | 2.0 | 4.5 |
| West Pakistan | 2.3 | 23.8 | 19.9 | 8.2 | 26.3 | 80.5 |
| Pakistan | 5.5 | 29.8 | 23.6 | 10.8 | 43.7 | 113.4 |

The area under forest is very small. The area which is not available for cultivation is considerable (29.8 million acres), particularly in Sindh. Culturable Waste Land other than fallow is also substantial. It is largest in West Punjab (10.5 million acres), followed by Sind (5.2 million acres) and in Eastern Pakistan (3.7 million acres). However, substantial parts of this area can be brought under cultivation without further irrigation facilities. The area and the yield of principal crops is given in the table below:—

| | (Area in Lakhs of Acres, and Yield in Lakhs of Tons). | | | | | |
|--------------------------|---|--------------|------------------|-------|-------|--------------|
| | Eastern Pakistan | | Western Pakistan | | TOTAL | |
| | Area | Yield | Area | Yield | Area | Yield |
| Rice | 20.6 | 71.3 | 21.2 | 9.9 | 230.9 | 84.2 |
| Wheat | 0.7 | 0.2 | 106.7 | 32.4 | 107.4 | 32.6 |
| Grain | 1.8 | 0.4 | 29.2 | 6.6 | 31.0 | 7.0 |
| Sugarcane | 2.6 | 3.9 | 4.0 | 4.8 | 6.6 | 8.7 |
| Jawar | ... | ... | 11.4 | 2.4 | 11.4 | 2.4 |
| Bajra | ... | ... | 23.9 | 4.7 | 23.9 | 4.7 |
| Barley | ... | ... | 4.5 | 1.4 | 5.3 | 1.6 |
| Maize | ... | ... | 10.0 | 4.26 | 10.1 | 4.3 |
| Tobacco | 1.4 | 6 | 6 | 3 | 2.0 | 9 |
| Tea | ... | ... | ... | ... | ... | ... |
| Rape and Mustard | 4.3 | 7 | 9.9 | 1.8 | 14.2 | 2.5 |
| Linseed | 8 | 1 | ... | ... | 8 | 1 |
| Cotton | 9 | 2 | 32.3 | 13.0 | 33.2 | 14.1 |
| Jute | 18.2 | (bales) 62.9 | ... | ... | 18.2 | (bales) 62.9 |
| | | (bales) | | | | (bales) |

Rice is the principal food crop of Pakistan and accounts for more than half of the total area under food crops. The production is concentrated in Eastern Pakistan, which has about 90 per cent of the total area under rice in Pakistan. Rice is the staple food of the population of Eastern Pakistan. Although 97 per cent of the total area under food crops in Eastern Pakistan is under rice, yet the production is insufficient for local requirements and the deficit has to be met from Western Pakistan. Though the production of rice in Western Pakistan is much smaller than in Eastern Pakistan, Western Pakistan is able to meet the deficit of Eastern Pakistan. This is because wheat

which is the staple food of the people is available in abundance so that a substantial part of the rice produced is not required for local consumption.

Wheat is the most important food crop next to rice. Out of the total area under food crops about one-fourth is under wheat. The cultivation of wheat is concentrated in Western Pakistan, which accounts for 99.3 per cent of the total acreage under wheat in Pakistan. This production is more than sufficient for local requirements and a small surplus is available for export.

The other important food crops are gram, bajra, jowar, maize and barley. The production of these crops is confined mostly to Western Pakistan. On the whole the production of food crops is more diversified in Western than in Eastern Pakistan.

The non-food crops are mainly produced for the market and are an important factor determining the volume of purchasing power and the general prosperity of the country. In this connection it is significant that the area under these crops is very small, being only 15 per cent of the total sown area. Jute, cotton, tobacco, tea, oilseeds, etc., are among the main cash crops.

LIVESTOCK

LIVESTOCK plays an important role in the agricultural economy of the country. Mechanized cultivation being practically unknown, livestock is the only source of power available for the various agricultural operations.

Besides livestock is the source of milk and milk products, meat, hides and skins, wool, bones, farmyard manure, etc.

The livestock population of Pakistan is given below:—

| Type | (In Lakhs) | | |
|---------------------------------|------------------|------------------|----------------|
| | Eastern Pakistan | Western Pakistan | TOTAL PAKISTAN |
| BOVINE POPULATION | | | |
| Cattle | 113.1 | 89.9 | 203.0 |
| Buffaloes | 5.4 | 48.5 | 53.9 |
| TOTAL BOVINE | 118.5 | 138.4 | 256.9 |
| NON-BOVINE POPULATION | | | |
| Sheep | 3.6 | 45.5 | 48.5 |
| Goats | 32.7 | 45.2 | 77.9 |
| TOTAL NON-BOVINE | 35.7 | 90.7 | 126.4 |
| Horses and Ponies | 6.0 | 6.0 | 12.0 |
| Mules and Donkeys | 12.8 | 9.5 | 22.3 |
| Camels | 4.5 | 4.5 | 9.0 |
| Poultry | 234.6 | 62.9 | 297.5 |

Though the total bovine population of Pakistan is rather large, its quality leaves much to be desired. The poor quality of the livestock means in effect a great drain on the fodder resources of the country.

BREEDS

The well defined breeds of cattle are Red Sindhi and Sahiwal for milk; Thari, Bhagnari and Dhanni for draught; Lohani and Rojhan are lighter types, the former especially being useful for hill tracts. Ravi and Nili are well-known buffalo breeds. The total bovine population is estimated at over 25 million but the bulk of it, particularly in Eastern Pakistan, is of poor quality.

Some efforts are being made to improve the quality of animals through better breeding, feeding and management and more efficient disease control, but more efforts are required.

The important breeds of sheep are fat-tailed Hashmagri, Harnai, Bibrik, and Waziri, and thin-tailed Damani, Kaghani and Lohi. Most of the sheep population is confined to Western Pakistan. The important sheep breeding areas are N.W.F.P., Baluchistan and Sind. The total population is estimated at about 5 million and the average yearly production of wool per adult sheep is approximately 4 lbs. Sheep are kept for a dual purpose—mutton and wool though generally speaking the former is regarded as more important. Pakistani wool is generally used in carpet-making as most of it is not fine enough for manufacture of good work. A scheme of grading is shortly to be introduced in the country.

The well-known breeds of goats are Kaghani Valley, Dera Din Panah, Dhanni, Barbati, Kamori, Black Bengal and White Bearded Bengal. Their main utility lies in the production of hair, skin and meat. Some breeds are good milkers and are being preserved as the poor man's cow. Since goats contribute to soil erosion in certain areas, the policy is to restrict the numbers or stall feed them or to replace them by sheep in areas where they cause erosion. Goat skins from Eastern Pakistan are of superior quality. The total population of goats is estimated at about 9 million.

Horses play an important part in transport. Their number is estimated at 540,000. Baluchistan and West Punjab are the best horse breeding areas. In addition, Pakistan has about 913,000 donkeys and 35,000 mules which are used mainly for transport.

Camels are bred in arid regions particularly in Sind, Bahawalpur and Mckran. They are used for ploughing and transport and as pack animals. They also produce hair and hides. The total population is estimated at 4,50,000.

Poultry exists in Pakistan in large numbers but is not very productive. Chittagong Aseel and Sarali are the important indigenous breeds. Replacement of the indigenous stock by suitable foreign breeds is the goal. In Eastern Pakistan there are a large number of ducks and their breeding will be encouraged in Western Pakistan also. The total number of fowls is estimated at about 30,000,000 and of ducks at 5,000,000. A private association—the Pakistan Poultry Association—has been formed for the purpose

of assisting the poultry industry and among its activities is a proposal to assist members in getting land.

As to export trade in animals, the figures from August 1948 to end of June 1949 are as follows: 411 milch cattle buffaloes; 2 working bullocks; 135 race horses; 4 donkeys; 22 dogs; 5,500 poultry.

The cattle have gone to Indo-China, India, Philippines, the horses to India; the poultry to Persian Gulf countries and in part for use as ships' food. A few animals have gone to zoological gardens abroad, viz., deer, partridge, camel.

DEVELOPMENT PLANS

Animal husbandry is primarily a provincial subject and the Central Government is mainly responsible for providing facilities for research and post-graduate training and for evolving a co-ordinated plan of development. Animal

Husbandry Research Institutes have been established at Peshawar and at Comilla as a federal agency for research, post-graduate training and manufacture of biological products.

An order for 4,000 doses of the biological agent known as mallein has been supplied to the Director of Veterinary Services, Iraq. It is hoped that Iraq and other countries in the north-west will find Peshawar a more and more useful centre from which to get their necessary supplies at competitive prices.

Two Animal Husbandry Conferences have so far been held. The second Conference was held in May, 1949 at the experts level. Its recommendations are being implemented in consultation with the Provincial and State Governments. The various problems to be tackled are:—(a) Loss of cattle; (b) Disease control, especially of rinderpest; (c) Nutritional requirements of domesticated animals; (d) Improvement and extension of training facilities

for animal husbandry workers; (e) Selective sheep breeding to increase the quantity and quality of wool; (f) Poultry improvement, including disease control; and (g) Scientific investigations as to the nutritive value of scrub plants.

In pre-partition days, Dr. F. C. Minnett, present Annual Husbandry Commissioner, who was then Director of the Indian Veterinary Research Institute (Mukteswar and Izatnagar), acted as editor and part-author of a handbook entitled *Outline of Veterinary Science*. The Government of Pakistan have decided to issue this book as a Government publication. At the time of writing the book is in the press.

Dr. F. C. Minnett also represented Pakistan at the annual conference in Paris in May of the International Office of Epizootic Diseases and contributed to the discussion on Ranikhet Disease of poultry.

FISHERIES

PAKISTAN has abundant resources in fish. They may be classified broadly into three main categories; namely, marine, estuarine and inland fresh water. East Bengal, Sind and Baluchistan have access to marine fisheries. The Gangetic delta of the Sunderbans and the Indus delta are extremely rich in estuarine fisheries. So are also the inland fresh water fisheries.

Eastern Pakistan is exceptionally rich in fishery resources. Fish is an important article of diet of the population of that area and large quantities are consumed locally. East Bengal exports its surplus fish to West Bengal.

The Governments of East Bengal, West Punjab and Sind have well organised Departments of Fisheries and have formulated schemes for the development of their fisheries resources still further.

Deep sea fishing has been undertaken with the help of a motor trawler, on an experimental basis, in the sea along the coast of Karachi where some of the finest fishing grounds have been located.

A scheme for the construction of a new Fish Harbour at Karachi has also been approved in principle as a first step towards the systematic development of marine fisheries. This harbour is intended to provide all modern facilities for berthing of fish boats and trawlers, modern hygienic fish curing, extraction of shark liver oils, cold storage arrangements and wholesale marketing of large catches of marine fishes.

The question of extending the activities of the Central Fisheries Organisation now working in Karachi to the coast of East Bengal is under consideration. Government are also actively considering the advisability of inviting a team of foreign fisheries experts for a general survey of the fishing conditions in Pakistan with a view to planning and developing fisheries and fish industries in the country on the most modern lines. Pakistan has become a member of the Indo-Pacific Fisheries Council of the Food and Agriculture Organisation of the United Nations which aims at tackling fisheries problems of the Indo-Pacific region on a collective and co-operative basis.

East Bengal

The value of the fisheries of this deltaic region lies primarily in the enormous area occupied by inland waters—rivers, creeks, *beels*, *baors*, swamps—to say nothing of paddy fields and more than a lakh small and big tanks. All these swarm with fish and, as the population has no aversion to fish the demand is enormous. Rice

and fish are the staple food of the population and no less than 90 per cent of the people consume fish as a regular item of diet. It is estimated that about one per cent of the population is actually engaged in fishing and a higher percentage in connected trades. There are 2,55,752 families of fishermen in East Bengal and as many as 4,50,000 subsist by fishing.

As a freshwater fisherman, the Bengali is very ingenious in his nets, traps and other devices are exceedingly clever and effective. The most lucrative inland fishery is that of Hilsa (*Hilsa ilisha*) which annually ascends the rivers from the sea and estuaries in big shoals in search of suitable spawning grounds in the Meghna, Padma, Ariakhan and other rivers. Other valued and abundant river and tank fishes are rohu (*Labeo rohita*), the Katla (*Catla catla*), mirgal (*Cirrhina mirigala*), Kalbas (*Labeo calbasu*) and some catfishes. Prawns and shrimps abound everywhere. Of important fishes taken in the lower reaches of the rivers and in the great network of creeks spread throughout the eastern part of the Sunderbans, the Bhetti (*Lates calcarifer*) and the mullets (*Mugil sp.*) are best liked. Apart from these estuarine fishes the most valuable marine fishes are the Mango-fish or Indian Salmon (*Polynemus*) and pomfrets. The sea-fisheries are as yet little exploited. Enormous quantities of *Jod fish* (*Heteropneustes fossilis*), *Clarus batrachus*, *Anabas testudineus*, *Ophicephalus punctatus*, *Ophichthus muridus*, etc.) grow in the derelict tanks, paddy fields, ditches, swamps, etc., almost everywhere in East Bengal and apart from meeting local demand to a great extent, they are much in demand in the local area as they are generally marketed in live condition. Some of these fishes are specially good for the invalid and the convalescent. Taking all the facts into consideration it can safely be said that the fishery wealth of East Bengal is enormous and is far in excess of any Province in Pakistan and India.

HISTORY

Following the enquiry begun in 1909 by Sir K. G. Gupta, an investigation of the steam trawl potentialities at the head of the Bay of Bengal was undertaken, the trawler "Golden Crown" being employed for the purpose. As the result of surveys a chart showing important fishery grounds was prepared. A suitable area among these was one adjacent to Chittagong abounding in sharks, skates, sea catfish and Indian Salmon. This part of the Bay was not, however, thoroughly surveyed on account of its long distance from Calcutta, the main consuming centre, and it is generally believed that a more thorough survey would reveal

many more fishing areas. Attempts are now being made to requisition trawlers to carry out the preliminary investigation before launching any ambitious scheme.

The Directorate of Fisheries was re-established in Bengal in 1942 after a lapse of 20 years, with Dr. S. L. Hora of the Zoological Survey of India as its Director. Dr. Hora left the Directorate in 1946, after the expiry of his term and was succeeded by Mr. Q. M. Rahman who continues to hold the post after the partition of Bengal.

The inclusion of the district of Sylhet in the province of East Bengal, added much to the fish wealth of the province. A large quantity of fish is exported to Assam from this district while from the districts of Khulna, Dacca, Mymensingh, Tippera and Faridpur about 5,00,000 maunds of fish are exported to Calcutta every year. It is estimated that about 3,00,16,000 maunds of fish are produced in East Bengal annually, the approximate price of which will be in the neighbourhood of Rs. 100 crores.

Freshwater mussels are used extensively at Dacca in the manufacture of cheap pearl buttons and in many cases pearls are also found in the mussels which the pearl dealers collect and sell in the various parts of Pakistan and India. The Dacca bangle factories constitute an important local industry of very ancient origin; their raw material is largely obtained from Madras and Ceylon chunk fisheries.

East Bengal's existing and potential fishery resources are immense, its more than a lakh small and big tanks, numerous *beels* and *baors*, when properly developed, can not only make every village self-sufficient as regards fish supply but produce substantial marketable surplus. There is no dearth of suitable areas for nursing and rearing fry and fingerlings and stocking fish for fattening. The province has also very important spawning grounds of carps in the rivers Padma, the Brahmaputra and the Haldia and in some smaller streams also. From all these areas millions of fry are collected and distributed to tank owners within and are also exported outside the province. Fry are also grown in the Government nurseries for distribution to tank owners at comparatively low rates. In the year 1946 as many as 11,11,000 and in 1947, 7,00,000 young fish were distributed from these nurseries in different districts for cultural purposes.

Demonstration fish farms on a small scale have been established in some districts for teaching tank owners the scientific method of carp culture. All these farms are run on a commercial

basis. Similarly a saltwater fish farm has shown wonderful results in a short spell of time. Owners of tanks are taking to fish culture now in right earnest and this is bound to add to the fish wealth of the province.

To augment the supply of seeds experiments for collection and hatching of fish eggs were carried out in the district of Chittagong by the officers of the Directorate and recommendations made for the improvement of the industry.

One of the greatest needs of the time is the protection of brood fish and young fry during certain months of the year. At present the fish at different stages are slaughtered recklessly with the result that sufficient quantities of prime fish are not available throughout the year. As soon as steps are taken with a view to their protection, substantial progress will be made in production of fish.

A very large quantity of dry fish is produced annually for which there is a good demand both in the markets at home and abroad. To effect improvement on the existing methods employed by the local fish curers, Government have opened centres at important places to demonstrate scientific and hygienic methods for the production of dry fish. Some prime fishes like Hilsa, Pomfret, Bhethi, etc., which are very suitable for curing are available in the estuarine areas and can be suitably cured for use in lean seasons.

Refrigeration facilities with respect to fish industry is undeveloped in this country. To solve the fresh fish transport problem cold storage and ice plants are going to be erected in selected fish assembly centres. Arrangements for *en route* refrigeration both by rail and by boat has been included in the long term programme.

BY-PRODUCTS

There is very good scope for a by-product industry in the fishing centres of this province. The most important of the by-products is Shark Liver Oil. Large numbers of sharks are caught annually in the coastal belt of East Bengal. The livers obtained from these sharks were generally thrown away by the fishermen. With the opening of Shark Liver Oil extraction centres at various places by Government these livers are now utilised for the manufacture of medicinal Shark Liver Oil. The species of Shark caught has been found to contain a high percentage of vitamin A. Suitable oil factories can be set up in Cox's Bazar, Khulna and Bakerganj areas. Other by-products include fish meal and fish manure. These are obtained from waste fish and fish wastes in the innumerable fish curing yards. Fish meal and manure are now prepared by the Fisheries Directorate for meeting home demand.

Fish-gel is another important product prepared by the Fisheries Directorate from wastes collected from the local markets as well as from the fish curing yards. There is good scope for cottage industries which can utilise these raw materials. Flooding canneries with equipments for manufacture of glue, meal and manure, etc., can also be set up in coastal areas where permanent stations cannot conveniently be put up. With a view to tackling the various scientific problems arising out of the day to day field activities on fish technology, laboratory has been set up in Comilla for conducting analytical study of fish, fish by-products, waste, soil, preservatives, etc., so as to disseminate research findings to the public interested in the development of fish industry. Pilot plant experiments on the manufacture of various kinds of processed fish and fish by-products are also carried out in the laboratory.

On the whole the prospect for factories for the large scale manufacture of various fish by-products are very bright. Government has been helping private enterprise especially those run on co-operative basis for developing the by-product industry.

The welfare of fishermen is also receiving the attention of Government. Capital goods are

procured and distributed to *bona fide* fishermen. They are also being organised into Co-operative Societies and are given preference to others in the matter of settlement of state fisheries. There is an overall shortage of fishermen's capital goods (yarn, cord-lar, sail cloth, etc.) and the supply is scanty and fitful. This is one of the real reasons why the fish crop cannot be harvested in full.

Sind

Taking into consideration the limited sea-board and the number of fishing villages, Sind has a rich sea fishery.

The fishing grounds are located not only around Karachi, but as far away to the south east as Beem and towards west as Sonbhan and even Pasni, Omara, Jiwani up to the Qwatar Bay. Vigorous drift net fishing is carried on in the sea-board specially up to 12 fathoms contour line throughout the coast. Fishing industry is better organised on the Sind coast than towards Las Bela and Kalat coast, for Ghol, Surmai, Rawas, Karzan, Pitho, Hiro, Dohkar, Sangro, Gissur, Kar, Lharo, Kanatyan, etc., etc.

Extensive fish curing operations are carried out on the coast individually with coloured salt as no Government fish curing yards are in existence. A fish curing yard has been sanctioned for Karachi along with a modern fish harbour which will be taken in hand shortly. Another yard may be set up at Mal on the Sind coast and others will be set up later.

There is a very large export of dry fish to Ceylon and Burma, where in the year 1947-48 more than 1,15,000 cwt. of fish and 60,000 mds. of cured prawns were exported. Fresh fish packed in ice was being exported to up-country towns but now owing to the increase of population in Karachi there is a very little surplus.

SCHMES

1. Edible oysters culture and establishment of an oyster park at Ibrahim Hyderi.
2. Development of prawn fishery and manufacture of semi-dried prawns.
3. Stabilising the fishing industry and improving the socio-economic conditions of the fisher-folk.
4. Deep-sea fishing experiments with modern type of power crafts and tackle. One trawler "ALA" is under operation and another "MARY MUDIE" is being rigged up.
5. Research and collection of data for the future development of Marine fisheries.
6. Establishment of an up-to-date wholesale fish market with cold storage, fish-curing yard, Marine Biological and Technological station, pilot plants for the manufacture of fish manure, fish meal and liver oil of sharks and other fishes close to the new fish harbour at Karachi proposed by the Port Trust.

Of the above schemes the third is under revision and expansion and sixth is in its final stages of sanction. Other schemes are under consideration.

20 maunds of "semi-dried" prawns were manufactured. The prawn season was slack owing to the unexpected cold wave and excessive production of globular organisms locally known as 'Pitta' which choked the nets and did not allow the cast nets to sink to the bottom.

One motor fishing trawler "ALA", 75 footer with 100 H.P. Diesel engine, fitted with power winch, has been fishing with Otter trawl since November 1948. It is at present working towards the Sind coast upto cape Monze and has done many cruises. Another trawler, "MARY MUDIE", 95 footer with 260 H.P. Diesel marine engine is being rigged up and is expected to start fishing after the monsoon towards Baluchistan coast.

A fishermen's Co-operative Purchase and Sale Society is functioning at Karachi and many such Societies have been formed in the interior. Government is considering to convert these societies into multi-purpose societies and a scheme to advance loans to fishermen is under consideration. Steps are being taken to improve the condition of the fishermen and the fishery schools.

Prawn Fishery—Seasonal fishery, which commences from the month of November and ends by end of March, is also a very important fishery of this province. On an average 60,000 mds. of cured prawns are exported every year to Colombo and other places.

The important fishing areas for prawn fishery are:—

Kurangi creek
Phiri creek
Kudi creek
Patiani creek
Gorabio creek
Dhabo creek
Chaan creek

Of the above, Phiti, Patiani and Dhabo creeks are the most prolific among the prawn fishing areas.

The prawns caught in Sind waters belong to a big marine group "Penaeidae" which are normally inhabitants of sea but migrate into estuaries of lower salinity in quest of their food which is predominantly diatomaceous in character.

The prawns comprise the following three kinds. The names are naturally in the local language.

1. "Jhalro" the biggest 5'-6"
2. "Kaliri" the medium 4'-6"
3. "Kidi" the small 2'-4"

A good number of sharks (Saw fish, Hammer head, and several other ordinary sharks) are captured specially during the months of August, September and October and again February and March. One variety, the "Basking" shark (*Cetorhinus typus*) which grows as large as 60 feet, is occasionally fished with harpoons. Its liver yields a large quantity of oil.

There are two distinct oyster-fisheries in Sind,—both present in the creeks which constitute the mouth of the Indus and its network, specially between Karachi and Ketiabunder. These are (1) edible oyster and (2) the window-pane oyster which yields pearls.

INLAND FISHERY

The most popular fish from the Indus is the Palla or Talloh (the well-known Indian Shad). This is under the control of the Revenue Department who lease out different stretches of the Indus. The Dumbra and other fresh-water carps and prawns are other items in the Indus fisheries.

The Hub River which forms the boundary between Sind and Baluchistan, contains the well-known sporting fish—Mahseer (Barbusotus).

The most important fishes of the inland waters besides Palla, are Dhambro (Labeo rohita), Thell (Catla catla) and Morakhi (Cirrhina mrigala). Sind has got many large dhanda, one of which Manchar Lake is about 20 miles × 10 miles and yields more than 20,000 maunds of fish annually; 450 miles of river Indus is very rich in fish fauna and steps are being taken to improve the fisheries of other dhanda also which are not so productive as they should be, owing to the brackish nature of the water.

There are many indigenous larvivorous fishes also which are being utilised in controlling malaria and other mosquito-borne disease.

MARKETING AND CO-OPERATION

THE Pakistan Government maintains a Central Organisation which is responsible for co-ordinating activities in marketing and co-operation. It carries out detailed marketing surveys of various agricultural commodities and livestock products with the help of the provincial marketing staff and for the preparation of final reports dealing with almost all the aspects of marketing such as supply, demand, preparation for the market, prices, assembling and distribution, transport, storage, grade standards, processing and seed requirements. On the basis of these surveys, development work in the marketing of various commodities is undertaken. The object is to secure for the primary producer a better return for his produce.

The results of these surveys have shown that the present marketing methods leave much to be desired. The share of the producer in the price paid by the ultimate consumer is rather low due to a number of reasons, for example, unregulated markets, lack of standard weights and measures, inefficient and expensive means of transport and defective storage and containers.

Action has been taken in certain provinces to regulate markets under provincial legislation. The regulated markets are looked after by Market Committees in which the Producers are in a majority. Market charges have been fixed, market functionaries have been licensed and the markets are looked after by a competent staff. Legislation for standardisation of weights and measures has also been enacted in certain provinces.

QUALITY CONTROL

Pakistan, essentially an agricultural country, has to ensure quality control in respect of agricultural and animal husbandry products, especially those which are exported. Measures have therefore been adopted to fix quality grades and standards in the case of certain commodities. The grading of ghee and eggs is being undertaken

on a voluntary basis. The compulsory grading of saan hemp and tobacco had to be suspended for a short time as the export trade in these commodities from East Bengal where they are mainly produced was dislocated due to the loss of the Calcutta market after partition. A Pakistan Wool Conference was held at Karachi on June 3 to discuss ways and means of establishing standard specifications for wool exported from the country. A detailed scheme is being worked out for this purpose by a sub-committee. The grading of hides and skins, particularly for export trade, is expected to be introduced shortly. Jute is already being exported on certain well known standards of quality. The Pakistan Central Cotton Committee is devoting attention to the cultivation of pure varieties of cotton and their marketing and export in well defined grades.

CO-OPERATION

The Centre also maintains an advisory service for co-operation, and it co-ordinates the activities of provincial departments. Pakistan being a country of small producers, it is essential that the people should be approached on a collective basis. The need for assisting the primary producers in the disposal of their crops has been realised for a long time and although the current solution has evaded so far, it is agreed that in any scheme aimed at improving the lot of small producers, the correct approach is through co-operation. Co-operative societies can undertake the disposal of their members' produce in a collective and organised manner and can ensure better financial results. Similarly, the requirements of producers can be met through co-operatives. A third form of co-operative has been evolved recently, *viz.*, Co-operative Multi-Purposes Societies which combine the above two types. Such societies not only undertake the sale of their members' produce after it has been harvested

but also make arrangements for purchasing the commodities and articles required by them both for production and consumption.

After the partition of India the staff of various joint-stock companies and banks in Pakistan which were almost wholly manned by non-Muslims left the country and migrated to India. This resulted in a complete dislocation of credit facilities in Pakistan. The private money lenders who were almost wholly non-Muslims also left their ancestral homes thus making the credit conditions in Pakistan still worse. The Central Co-operative Bank in West Punjab and N.W.F.P., however, rose to the occasion and with the limited resources and insufficient staff at their disposal, opened branches in various districts and markets and met the credit requirements of the people. In East Bengal, however, a new provincial bank had to be organised as the provincial co-operative bank of undivided Bengal was located at Calcutta.

The Co-operative movement is being utilised in Pakistan in various directions for many purposes. It is believed that the salvation of the small man lies only through co-operatives. For the purpose of putting him on his legs, for educating him in the broader sense of the word education and for organising him and canalising his efforts, it is realised that there is no better media than co-operatives. An idea of the extent of the co-operative activities in Pakistan can be formed from the types of societies which are operating at present: *viz.* Punjab Agricultural Credit Societies; Co-operative Farming Societies; Fruit Growers' Societies; Consolidation of Holdings Societies; Anti-Erosion Societies; Co-operative First-Aid Centres; Co-operative Medical Aid & Public Health Societies; Multi-purpose Societies; and Co-operative Commission Shops.

The popularity these societies have gained, is very encouraging.

FOOD PROBLEMS

IN 1948, the various surplus units of Pakistan declared a surplus of 333,000 tons of foodgrains which was more than adequate to meet the requirements of the deficit units. But, unfortunately, both in West Punjab and East Bengal there were very heavy rains accompanied by unprecedented floods. The Bogarl Band of the Indus also gave way. The food position accordingly received a very serious setback. The crops in two surplus districts in East Bengal were completely washed away. In Sind, the rice crop was very severely damaged and in West Punjab crops, in a number of districts, were seriously affected.

This natural set-back gave an impetus to unsocial elements which became very active. Smuggling, hoarding of foodgrains and black-marketing became very prevalent. Unfortunately the prices of foodgrains in the neighbouring country were four times the prices in West Pakistan which provided a great incentive to smugglers.

The long Indo-Pakistan border could not be sealed off but all possible steps were taken to check smuggling. The strength of the enforcement police was considerably increased. They were also provided with arms and ammunition and the means of quick transport. The penalty for food offences was enhanced and, in certain cases, exemplary punishments were awarded. Besides, a ban was imposed on private carrying of foodgrains within a certain area of the border where rationing was introduced. All these steps had a very salutary effect and smuggling was very considerably reduced.

Internally the evils of hoarding stocks of foodgrains and black-marketing became a serious menace. The various Provinces took anti-hoarding and anti-blackmarketing legislative measures, and penalties for not declaring stocks or hoarding quantities of foodgrains in excess of certain quantities were adopted. The

scale of food ration was reduced. A ban on the manufacture of certain wheat products was imposed and the number of guests at entertainment parties was restricted. Serious wheat shortage occurred in the North-West Frontier Province, Baluchistan and West Punjab. In West Punjab even a breakdown of the rationing system was apprehended at one stage.

IMPORTS

To meet the situation the Food Ministry embarked on a programme of import of food from foreign countries. An application for an allotment of 100,000 tons was made to the International Emergency Food Council. Other sources were also tapped. Wheat was purchased from Russia and some quantities of coarse grains, maize and barley were procured from Hungary, Yugoslavia and Australia.

The imported foodgrains very much reduced the profits of blackmarketing and the hoarders had to disgorge their stocks. The result was that at a time when scarcity was expected to be the acutest, prices began to show a downward trend. The procurement of foodgrains in the Provinces also improved because of a general realization that hoarding might not be profitable.

Food ration has at the time of writing been raised to eight Chhattaks per adult per day throughout Western Pakistan and the compulsory ration of rice has been withdrawn. It is hoped that Pakistan would not have to import any wheat during the crop year.

POSITION IN EASTERN PAKISTAN

The food position in Eastern Pakistan was unsatisfactory. The rice deficit of that province was previously accepted by the Centre to be 140,000 tons out of which 68,000 tons were to be met from Sind and Baluchistan. The International Emergency Food Council allocated 33,000 tons of rice from Burma, Egypt and Italy. There still remained a balance of 49,000

tons to be found for Eastern Pakistan from other sources. The food position in East Bengal, however, further deteriorated, and its deficit in rice was reported to be about 700,000 tons. Vigorous efforts were made to get further quantities of rice from abroad. So far about 45,000 tons more have been secured and application for further assistance through the International Emergency Food Council is under consideration. Sind has in the meantime offered another 20,000 tons of whole rice and about 5,000 tons of Kargil broken.

For 1949-50, the total quota of foodgrains for East Bengal is 348,000 tons, consisting of 170,000 tons of rice and 178,000 tons of wheat and wheat products. Of this quantity 93,300 tons of rice and 33,530 tons of wheat have already been despatched. Arrangements have now been made to send 30,000 tons of foodgrains from West Pakistan and 15,000 tons from other sources every month to East Bengal and thus effectively remove food scarcity there.

Of the total quantity of rice, the despatch of which is to be completed by November 1, 1949, 84,000 tons were procured from Sind, 11,000 tons from Baluchistan, 60,400 tons from Burma, 5,000 tons from Egypt, 8,000 tons from Italy and 1,600 tons from other sources. The despatch of East Bengal wheat quota is to be completed by April 30, 1950, of which 46,000 tons were procured from West Punjab, 3,000 tons from Khairpur. The 62,000 tons of wheat which is imported from abroad, is lying in Karachi.

It is expected that foodgrains would be available in plenty in East Pakistan and prices would soon come down to normal.

SUGAR

The sugar requirements of Western Pakistan at the increased ration scale come to 168,000 tons. Eastern Pakistan has been consuming

about 25,000 tons a year which is near about its own local production. In the beginning of the year 1948 Pakistan purchased fairly large quantities of sugar from soft currency areas like Brazil. Later on, when the Brazilian Government placed an embargo on the export of sugar, Pakistan was compelled to get sugar from the hard currency areas. During the first quarter of 1949, Pakistan received 47,000 tons of sugar from overseas. Further 60,000 tons have been purchased through the Embassy in Washington. Out of the sugar thus purchased, 67,000 tons have already been received. An offer of 55,000 tons of British refined sugar made

by the British Government has been accepted. The scale of sugar ration both in urban and rural areas has been raised by 50 per cent during the month of Ramzan throughout Pakistan and it is hoped that no sugar scarcity would occur during 1949.

EDIBLE OILS

Pakistan is heavily deficit in edible oils and oil seeds. The shortage is more acute in East Bengal which is a pre-eminently oil eating area. To meet this deficit, the Government encouraged import from whatever source was available.

Import of edible oils and vegetable oil products from soft currency areas was placed on the Open General Licence.

Under a new agreement arrived at between the Government of United Kingdom, Ceylon and Pakistan, Ceylon is to supply 6,000 tons in terms of copra oil to Pakistan during 1949. India has also agreed to supply Pakistan under the latest Inter-Dominion Commodity Exchange Agreement during July 1, 1949 to June 30, 1950 with 60,000 tons of mustard oil, 15,000 tons of groundnut oil, 6,000 tons of copra oil and 15,000 tons of vanaspathi.

IRRIGATION

WESTERN Pakistan is one of the most intensively irrigated areas in the world. Irrigation is made possible by the rivers Sutlej, Ravi, Chenab and Jhelum, which rise in the Himalayas and flow southwards, dividing the great West Punjab plain until they join the Indus in its two-thousand-mile journey to the sea. The water supply is perennial as it comes from the glaciers of the Himalayas.

The preliminary surveys in Western Pakistan have often been carried out under extremely adverse conditions. The scorching heat, the constant illness of the staff and the labourers made progress slow and difficult. On the frontier the working parties had to be guarded from hostile tribesmen, who however later turned into peaceful cultivators. The difficulty of getting fuel to make bricks and lime often hindered construction.

After the failure of canal projects depending on private enterprise, Government decided in 1866 to take over irrigation construction. The Lower Swat Canal was begun in 1876 with the object of inducing the tribesmen to settle down and become peaceful farmers. In 20 years the treeless and uninhabited country became a vast expanse of cultivation, dotted with villages, the canal irrigating a total area about 160,000 acres.

The canals between the Jhelum and the Sutlej led to extensive colonisation and settlement. Though the greater portion of the region had a yearly rainfall of less than 10 inches, the soil was good. Colonists were encouraged to occupy irrigated land, and so successful was the experiment that the Government obtained large revenues from the project.

The Lower Chenab Canal of 1890 commanding an area of over 3 million acres, is one of the world's great irrigation works. The area was mapped out in squares of 27.25 or 16 acres, each square with its separate inlet of water. The squares were subdivided into one-acre fields by the cultivators, and grouped in villages of 1,500 and 2,000 acres. Peasants were offered land on a square basis, yeomen four to five and capitalists upto 500. Each colonist was given land for two or three years; if at the end of that period the settler was satisfactory he was given a permanent right of occupancy and the rights became hereditary. Only the purchasing capitalists had full proprietary rights. The settlers were rewarded by an excellent crop, and thousands applied for land.

In the Jhelum and Bari colonies, the railways were built even before colonisation, and towns were laid out. In ten years the population increased from 8,000 to 500,000.

The Triple Canals Project is also a remarkable piece of engineering. A large area to the west of the Sutlej—the Bari Doab—needed irrigation. The Chenab and Ravi had no water to spare and the Sutlej water was required to irrigate the territory on its own banks. The engineers in charge proposed to take the water from the Jhelum, the most westerly of the four Indus tributaries, and bring it by canal to the Chenab and turn it into the Lower Chenab Canal. The water from the Chenab, which was now not required for its own canal was tapped higher up by a second great canal and the Chenab waters, conducted through another desert waste,

which incidentally benefited *en route*, were taken in a level crossing over the third river, the Ravi, to irrigate the Lower Bari Doab region. The great scheme was completed between 1912 and 1915. It consisted of 433 miles of main canals, the total area commanded being 3,997,000 acres, or 6,250 square miles.

SIND

Till then the irrigation of Sind had received comparatively little attention, and the great Indus itself remained almost untapped. The design for a barrage at Sukkur and preparation of the canal projects were finalised in 1919-1920. This project is perhaps the most spectacular yet attempted in Western Pakistan, comprising as it does a mile-long barrage across the Indus and seven large canals, four at one end of the great dam and three at the other. It is the largest irrigation work of its kind in the world. The following figures give some idea of the immense scope of the project and the planning and labour involved in its construction. The canal system irrigates an area of nearly six million acres, equal to one-quarter of the area of England, or about one-fifth of the total irrigated area of Pakistan, which is 30 million acres.

The largest of the Sukkur canals, the Eastern Nara and the Rohri, are 226 and 208 miles long respectively. The total discharge of the seven canals is 46,617 cusecs. The cost of the barrage and canal-head regulators was Rs. 4.04 crores, about £ 3 millions. The maximum number of the workers working on the project at any time was 60,000, the excavation being divided between manual labour and dredgers.

Work on the site started in 1923. Townships had to be built on both banks, with hundreds of living quarters, hospitals, shops and recreation centres. Twelve miles of metalled roads were laid, and 40 miles of track to connect Sukkur with the broad gauge railway. Cut-stone for the barrage was obtained from a quarry at Rohri, over about three miles of narrow gauge rail. The immense amount of stores and machinery necessary for this gigantic project had all to be assembled. The barrage fleet numbered four steam tugs, four motor-launches, and forty 100-ton barges.

Work on the barrage itself started in 1926, and the whole scheme was formally opened by the Viceroy on the 13th January 1932.

A solid construction on sand foundations across the wide, deep waters was accomplished by using "coffer-dams." Steel piles were driven into the riverbed projecting well above the flood-water level, like the sides of a huge box; they were supported on the inside by a rampart of sand dredged from the river, and the water was pumped from the hollow enclosure. The piles were built on a stone flooring. And the piles were removed on completion.

The foundations of the barrage were run out in two cofferdams from either side of the river, and one in midstream enabled the piers to be completed. On the piers were built two tiers of connecting arches, the lower tier carrying a roadway. Under each arch was fitted a gate of steel plate to be raised or lowered, the gates of both tiers being used in conjunction to control the flow of water.

The area irrigated by the barrage, nearly 6 million acres of land with an average rainfall of two to three inches, produces annually over a million tons of rice and millet, and about ninety thousand tons of cotton. The barrage changed the desert into the "granary of the East."

Recently some cracks were noticed in the facing stones of ashlar masonry of nine piers of the Sukkur Barrage. The Sind Government after close and thorough inspection of the Barrage and examination of seven different reports submitted by various Pakistani and foreign experts, adopted a Rs. 64,000-scheme proposed by the Chief Engineer of Sind.

The repairs of the cracks have been taken in hand and it is hoped that work would be completed by September 1949.

Pakistan has a total area of 200 million acres, out of which 155 million is still uncultivated and 170 million unirrigated. Two multi-purpose hydro-electric schemes are under way, one at Warsak in the North-West Frontier Province and the other at Rasul in the West Punjab. These will provide power for Pakistan's industrial expansion programme and water for irrigation.

NEW PROJECTS

The biggest development scheme in agriculture is the Lower Sind Barrage. This scheme will be ready in the year 1952 and the area that will come under cultivation, after the completion of this scheme, will be 2.70 million acres. As soon as the Barrage starts working, enough food-grain will be produced not only for supply to East Bengal and other deficit areas, but also for export.

The other major scheme is the Thal Project in West Punjab, which is already under construction. There is also the Rasul Tubewell project which is at the investigation stage.

With regard to the North-West Frontier Province a number of schemes have already obtained the sanction of the Centre, one of which the Khashmi Lift Irrigation scheme, for instance, will bring under cultivation, 10 to 12 thousand acres of land. Under the Lift Irrigation for Munam Nullah about 2,000 acres of new land will be brought under cultivation. A third scheme which is sanctioned is the Irrigation tubewells in Qasba Begram.

Other schemes include the extension of Mama Khel Jaddi canal, the remodelling of Takharwat distributory in the N.-W.F.P., and the Rod Kohli irrigation scheme, the last of which will bring 6,167 acres under cultivation. All these schemes have been sanctioned by the Centre and the Provincial Government can have the money for putting the schemes into execution. These schemes have all been approved by the Development Board and by the Ministries of Agriculture and Finance.

About the vast undeveloped area of Baluchistan, which is directly under the administration of the Central Government, it is clear from the budget that about 80 to 40 lakhs will be spent on development schemes. Three irrigational schemes, bringing large areas of uncultivated and barren land under cultivation have been sanctioned and will be financed by the Centre. In addition to that, nine other schemes costing

about 30 lakhs have been sanctioned by the Centre and these will also be put into execution soon.

A new era of well-irrigation is being planned. The Government of Pakistan have invited Sir William Stampe, former Chief Engineer of the United Provinces, India, to explore the possibilities of tube-well irrigation. A large number of tube-wells are being manufactured in the Tube Well Workshops in Lahore for irrigation purposes in Lyallpur, Jhang, Sheikhupura and Sargodha Districts under the Ravi River system.

The electrical power for these wells will be provided by the Rasul Hydro-Electric Works.

A Pakistan Food and Agriculture Planning and Development Conference was expected to be held in July in Karachi to devise ways and means to check the menace of water-logging, adopt a scheme of tube-well irrigation and consider other irrigation projects.

The Irrigation Research Institute in Lahore started 25 years ago as a modest laboratory to investigate problems in certain aspects of irriga-

tion engineering, is now generally recognised as one of the leading research institutes in the East. Work on future irrigation projects and on those now under construction will be greatly facilitated by the work now being done at the Institute as identical conditions can be reproduced by means of models in the institute, thus avoiding the costly delays caused by faults in the actual construction.

(Also see article on Irrigation in the Indian section.)

POWER RESOURCES

THE normal sources of power are coal, oil or water. The coal resources of Pakistan are limited. While every effort is being made for the proper utilization of these resources, Pakistan has to look to other sources of power for rapid and intensive development of the country. Exploratory and prospective work is in progress both in Western and Eastern Pakistan.

Till such time as oil is struck on a commercial scale and arrangements for refining it are made, Pakistan will have to continue to depend on its hydraulic resources for power. In order to harness this and to ensure their co-ordinated and planned exploitation, Government has set up a Central Engineering Authority and charged it with the following duties:—(1) Prevention and control of floods; (2) Prevention of erosion, and soil conservation; (3) Prevention of water-logging, and reclamation of water-logged land by drainage, pumping and other methods; (4) Improvement of drainage; and (5) Development of navigational facilities.

The Authority will also co-ordinate the development of electric power, and assist the provinces and States in the navigation, survey, preparation and execution of thermal power schemes and hydro-electric projects. It will aim at the adoption, as far as possible, of a uniform policy in respect of procurement of plant, generation, transmission and distribution of electricity, and building up model tariff structures. It will collect and publish statistics on national power resources, and act as a clearing house of information on all matters relating to power availability, both present and prospective.

An Industries Conference held in Karachi in December 1947, recommended that the highest priority should be given to the generation of hydro-electric power. It laid down a target of 500,000 kW. to be aimed at in the next five to seven years to meet the electric requirements of Pakistan for industrial and other purposes. This recommendation has been accepted by the Pakistan Government. Of the 5,00,000 kW., 1,00,000 kW. will be consumed in Eastern Pakistan. The target for West Punjab and North-West Frontier Province for the next 10 years has been fixed at 95,000 kW. At present, the total installed capacity (water, oil and coal) is 77,330 kW., a figure which falls far short of the new Dominion's domestic and industrial needs.

The Industries Conference specified the projects in order of priority, which were necessary to meet the short and long-term needs of the country. The conference was followed by a rapid survey by Sir Henry Howards, a consulting engineer. He agreed with the recommendations of the Industries Conference and suggested the establishment of a Central Engineering Authority, a body which has now been set up.

The Central Engineering Authority examines the schemes prepared by the Provincial Governments and makes recommendations to the Central Government. Four schemes have been given top priority, namely the Karnafull Project in East Bengal, the Rasul Hydro-Electric Scheme in West Punjab, expansion of Malakand Station in the N.-W.F.P. and the Dargai Station near Malakand.

HYDRO-ELECTRIC SCHEMES

In the West Punjab, the Rasul Hydro-Electric Scheme now under construction provides for the installation of two Kalpan Generating Sets with perhaps the largest turbines of their kind in the sub-continent. The project, which utilizes the head available from the Upper Jhelum Canal into the Lower Jhelum Canal, is likely

to be completed by the end of 1949. It will give a firm power of 14,000 kW., the installed capacity being 33,000 kW. The estimated cost is Rs. 7,00,00,000. The scheme will provide cheap electricity to about 30 towns in West Punjab and will also work several tube-wells for lift-irrigation and for improving water-logged areas.

The Mangla Hydro-Electric Scheme will produce about 10,000 kW. of primary power with a fall of 30 feet near the headworks of the Upper Jhelum Canal. Three 6,000 kW. Kampan Wheel Turbine Generators will be installed and the water will be directed into the river Jhelum and the Bhoj regulator.

The other approved hydro-electric project in West Punjab will be located in the district of Mianwali. It is to be developed in three stages giving ultimately a firm power of 65,000 kW. The first stage will yield 15,000 kW. The River Indus has several sites in its upper reaches capable of generating several lakhs of kW's of energy.

In East Bengal three separate investigations have been made for locating suitable sites on the Soma, Sherwani and Karnafull rivers. The Karnafull project is estimated to be capable of producing 60,000 kW. of electric energy in addition to irrigating 70,000 acres, controlling the Karnafull floods and affording inland navigation facilities in the river up to its mouth in the Bay of Bengal. It is likely to cost Rs. 5,00,00,000 and may take five years to complete. It will serve many places including Chandpur, an important jute-producing area in the province. Pakistan's limited jute baling capacity—27 lakhs bales out of 60 to 70 lakhs produced in the province and the complete lack of jute textile mills are the chief handicaps in the economy of East Bengal. The generation of more electricity will encourage the starting of jute pressing and textile mills. It has, therefore, been given the highest priority in the development schemes of the province as a whole.

There are about 60 stations in Pakistan worked with oil. The Attock oil-fields have an output of about 15 million gallons per annum. Sind, Baluchistan and East Bengal are being surveyed for oil.

It is to the North-West Frontier Province that industry has to look for its immediate needs of hydraulic power. The capacity of the Malakand Station which stands at 10,000 kW. will be doubled by the end of 1949 by the addition of two 5,000 kW. generators ordered from the United Kingdom. In another 3 years, 2,000 kW. of hydraulic power will be available from the Dargai Station. This will utilize the water from the tail race of the Malakand power station, to avail of a further drop of 250 feet before it falls into the Upper Swat Canal. The project is estimated to cost Rs. 1,50,00,000.

West Punjab, however, requires much more power than can be available from Dargai, and it has, therefore, been decided to establish a hydro-electric plant at Warsak in Mohmand Tribal Territory on the Kabul river. It has been roughly calculated that the Warsak scheme will cost Rs. 10 crores including transmission lines through Peshawar to Rawalpindi, where the power will be delivered in bulk to West Punjab. The Warsak (65,000 kW.) is a multi-purpose project providing not only power, but water for much needed irrigation of 65,000 acres of fertile land in the Peshawar district now lying barren, and release of the Bara river water for irrigation in Tribal areas, including a portion of the Khajuri plain, outside Jamrud. It will also stimulate tube-well development in the Kohat valley for the

irrigation of large fertile tracts now lying fallow. Warsak will supply power for working the Mulla-gori marble mines, four miles from Warsak dam, coal deposits in the Chera hills near Peshawar and in the Kohat district, gypsum in Kohat, copper ore in the Mohmand country and subsidiary industries. It will also provide, by means of canals, navigation between the North-West Frontier Province and West Punjab. This parallel agricultural and industrial development, which the Warsak scheme will produce, is expected to make the North-West Frontier Province at present a deficit area self-sufficient in food, raise the standard of living and divert the exuberant energies of the Frontier Tribes from war-like pursuits to peaceful and productive occupation. With this change in conditions, the Frontier problem which baffled administrators since the time of the Moghuls will cease to exist.

In Sind there are two projects under investigation, for utilizing falls available in the Rohri Canal and the Eastern Nara Canals for generation of electrical energy. The Rohri scheme will probably have four kW. units, and the Eastern Nara three. Both will be supplemented by thermal stations of equal capacity. The cost has roughly been estimated at Rs. 4.5 crores.

Besides the above projects, which are likely to be taken up in the near future, a site has been discovered on the Indus river at Ghazi, several miles above the Attock Gorge, for the construction of a barrage. This will deflect 15,000 cusecs, the minimum available supply in the river at that point, into a power channel 35 miles long and a drop of 180 feet. It would be possible to generate here nearly 2,00,000 kW. of electrical energy. The project will be taken up some time in the future, when the demand has sufficiently developed to justify the construction.

To survey the present condition of thermal plants scattered throughout Pakistan and to make recommendations for their improvement, Government have appointed a firm of consulting engineers who have already begun work in Western Pakistan. When supplies from the Mundi Hydrel scheme (in East Punjab, Indian Union) begin to diminish, West Punjab will be able to meet its requirements of electric energy not only from the North-West Frontier Province but also from the thermal sets which are now on order in England. Two 4,000 kW. sets are expected in West Punjab this year.

Government have also under consideration the provision of additional thermal power, specially in Eastern Pakistan.

During the next 10 years, generation of additional power in Western Pakistan should be as follows:

| | |
|---------------------------|-------------|
| Rasul | 14,000 kW. |
| Mianwali, Stage 1 | 15,000 kW. |
| Dargai | 20,000 kW. |
| Warsak | 65,000 kW. |
| Total | 114,000 kW. |

In Eastern Pakistan, the Karnafull project when complete is expected to generate 60,000 kW. This with the present production in Eastern Pakistan of about 8,000 kW. and in the West Punjab of about 50,000 kW. will raise the total electric energy available in Pakistan at the end of six years to 2,32,000 kW. or about three times the present figure.

(See also article on hydro-electric development in the Indian section.)

MINES AND MINERALS

ACCORDING to the expert opinion of Dr. E. R. Gee, who helped to establish the Geological Survey of Pakistan in 1948, there are mineral resources sufficient in Western Pakistan to enable the Government to industrialise the State to an appreciable degree. Geologically speaking, Pakistan is very young, having been under the Tethys sea for long epochs before its birth. The age of the land is hardly 100 million years, while the earth itself is more than 1,000 million years old.

Limestones, sandstones, clays, calcium, sodium and potassium salts and gypsum are found in abundance in almost all the provinces of Pakistan. While there are Tertiary coal and petroliferous shales in several parts, there are quantities of glass sands, sulphur, alluvial gold, iron ore and mica in restricted areas.

Some intrusions of the ultra-basic type took place in the Mesozoic and Tertiary ages as a result of igneous activity in the mountains of the North-Western Frontier Province and the Baluchistan plateau. Rare minerals like chromite are thus found in numerous veins.

SALTS

The Khewra mines in the Punjab Salt Range, with hundreds of feet of thick seams of rock salt, are very remarkable. The floors, the ceilings and walls are of solid translucent salt; a light torch is reflected from a myriad points. In 1939, about 200,000 tons of pure rock salt were extracted from the Khewra and Kohat salt mines.

Very rich potassium salts, which can be used as agricultural fertilizers and in other chemical industries, are intercalated with this salt in the Salt Range in some horizons.

Huge deposits of common salt are located in Tharparkar District (Sind), the beds, in some cases, being six feet thick. It is believed that these deposits alone would serve the entire population of Pakistan for over 2,000 years. Common salt is also manufactured by solar evaporation of brine at Mauripur (near Karachi). Large quantities of this commodity are exported to East and West Bengal. About 50,000,000 maunds of salt are produced annually at the Mauripur works.

Over a dozen mineral springs in fractured anticlines of Tertiary rocks in Kohistan, Laki (near Kotri) and Mangho Pir (near Karachi) have medicinal properties and can be developed into first class spas.

Some valuable natron-producing lakes (Khara chaniloo) are also found in Sind, Khairpur State and in the East Nara valley. Two to three thousand tons of soda and other sodium salts are extracted every year and exported to Arabia, Bombay and Aden. Khara chaniloo can also be used in making light biscuits, washing clothes, hardening treacle and manufacturing soap and tobacco products.

Another precious possession of Pakistan is gypsum, which is embedded in Tertiary rocks, associated with shales and clays. The deposits of gypsum are widespread throughout Western Pakistan in accessible areas and in very large quantities. Gypsum which can be useful in the manufacture of calcium salts, plaster of Paris, plasterboards and wall boards, is yet to be worked on a commercial basis. Selenite which is a crystal is also available in certain parts of the country. A 50,000-ton fertilizer factory is being set up by the Government.

Glass sand is found in large quantities in Jungshahi (Sind), the Trans-Indus Salt Range, Mianwali and Bashaarat (West Punjab) and Paniala (N.-W.F.P.). Glass industry of the modern type was first established in the sub-continent in 1892 in Jehlum, West Punjab.

One of the chief components in the manufacture of glass and of sodium silicate is silica sand, which is found in abundance in the soft sandstones of Tertiary age. According to Dr. Crookshanks, Director of Archaeology, Government of Pakistan, there are about 230,000 tons of silica sand, which with normal exploitation should last about 20 years.

Pakistan has the second largest deposits of high-grade chromite in the world. Chromite, associated with serpentine, was discovered in segregated masses of ultra-basic intrusions along the hills, bordering the Zhob valley, and in the Upper Pishin Valley in Baluchistan. About two miles east of Khanzal, a mass of pure chromite, 400 feet in length and five feet in breadth, has also been discovered. More important than this is a deposit, in the same Zhob valley at Hindubagh with nearly 50 per cent chromium oxide. Chromite has also been discovered recently in the N.-W.F.P., on the Dattakhel road in North Waziristan and in Chitral State. There is some possibility of finding the ore also in Kalat State.

The mineral is essential for making ferro-chromium and other special steels required for projectiles, gun-toting, armour plates, high-speed tools, springs. It can also be used for manufacturing refractory bricks for furnaces, pigments and leather tanning. The average annual production of chromite during the last decade was nearly 12,000 tons, but lately the output has fallen. So far a total of nearly 500,000 tons of chromite have been extracted from the time the mines started functioning.

IRON AND COAL

There appear to be substantial deposits of coal below 250 feet in Baluchistan and West Punjab. The coal was of sufficiently good quality to raise steam and generate electricity, which, in conjunction with Pakistan's hydro-electric schemes ought to provide motive power for a rapid industrialisation of the country. Tertiary coal has been mined from the Dandot coalfield in the West Punjab Salt Range for many decades. Some of the rocks are of Jurassic age, and the coal is poor in carbon contents. A small amount of lignite coal occurs a mile east of Mira Kawand in the Sipi Toi (South Waziristan) and beyond Pir Karal, a hill to the north-west of Kaniguram. There are traces of Tertiary coal in Chittagong (East Pakistan) as well. The main source of Pakistan's annual production of about 500,000 tons of coal is from the Salt Range (West Punjab), Khoat (Baluchistan) and the Sind Kohistan mines. The Pakistan Government propose to set up two briquetting plants of 20-25 tons capacity, one for West Punjab and the other for Baluchistan for briquet slack coal.

There are iron deposits in the valley of the Panj-Kora river, specially in the Baraul and in the Lipur Jandawal Hills, and also among the Hills south-east of Bannu in the N.-W.F.P. Brown hematite of low grade is found in the limestone and sandstone beds in some parts of Sind Kohistan. At Tatta (about 70 miles west of Karachi) smelting operations were carried on in the past, and swords and other weapons were manufactured. Iron ore is also found in association with lead ore in igneous and metamorphic rocks in the Baluchistan region.

It is estimated that there are about 200,000 tons of sulphur located in Koh-i-Sultan, at Sanni in Kalat State, and in the Chitral State, and Marian in the N.-W.F.P. Between 1941 and 1944 nearly 66,300 tons of sulphur ore were extracted and transported from Koh-i-Sultan, which was one of the main sources of supply for the sub-continent during the Second World War. Sulphur is also found in the alluvium

in the Khairpur and Jacobabad areas and in the neighbourhood of hot springs like the Laki Spring.

At a Conference held in January 1949 an Association of Industrialists was formed to exploit the sulphur resources of Pakistan, and as a first step the industrialists decided to install a pilot-plant to refine sulphur on a semi-commercial scale.

Cores of excellent flint nodules are found in the Nummulitic limestones beds, as for instance, near Sukkur and Rohri (Sind). There are also remains near Aror. Flint pieces are found in alluvial deposits from Jurassic rocks.

Copper was worked near Mohenjodaro (Sind), nearly 5,000 years ago. Today copper ore of good quality is found in Mohmand (tribal area country) in Loral Pass (Chitral), North Waziristan, and in the Ras Koh Range in West Baluchistan.

Alluvial gold is secured from the gravels of old terraces in the higher reaches of the Punjab rivers, particularly in the Indus, and in the gravels in the Attock, Mardan, Hazara, Jehlum and Khyber Agency.

Antimony is only found in irregular veins in slates and gneisses in the Chitral State (N.-W.F.P.) and Sakrand (Kalat State).

Granite, limestone, marble and slate occur in Sind, West Punjab, and the N.-W.F.P. Portions of the Lushai and Chittagong Hills in East Bengal also yield good limestone and associated minerals. Marble of good quality is found at Maneri in the Swabi Tehsil, Mardan District, Shahmina and Kanbela Khwar.

Good road metal is available throughout Western Pakistan in a large number of open limestone and other quarries worked by the inhabitants for centuries. The best use for the Tertiary limestone found in Sylhet, Salt Range and Sind is in the manufacture of cement, which can be exported to foreign countries. There are cement factories at Karachi, Sukkur, Dandot, Wah and Sylhet.

Fireclay deposits are discovered in Paniala in the Dera Ismail Khan (N.-W.F.P.) to the extent of 15,000 tons. Oreochre is found in Gaj deposits of Sind. Coloured clays are also found in Laki Range in Sind.

Arsenic in orniment and realgar deposits occur in Chitral State in Tirich valley.

Lead of galena deposits is available in the Chaghal District of Baluchistan. Cerussite or lead carbonate which is found in limestone breccia and is associated with antimony occurs in Sakran (Kalat State). Jamesonite deposits are found in Chitral (N.-W.F.P.) and Hazara Districts, while native lead is also available. There is large scope for oil exploration in Western Pakistan. Petroleum rocks which are mostly Nummulitic of Eocene and Miocene ages, can also yield precious oil. These extend from the Indus valley across the Salt Range and Suleiman-Kirthar Ranges to the plateau of Baluchistan. The Assam belt in Eastern Pakistan and the Lushai Hills in East Bengal, also have petroleum deposits.

The Punjab wells have so far yielded upto 15 million gallons of petroleum annually and there is also an oil refinery established at Rawalpindi.

INDUSTRIES

"PAKISTAN would welcome foreign capital seeking investment with a purely industrial and economic objective and not claiming any special privileges," said a statement on Industrial Policy issued by the Government of Pakistan on April 1, 1948—the blueprint of Pakistan's industrial development.

The statement ranged over the whole field of the country's economy, dealing with aims, and objectives, the role of the Centre and the provinces in industrial planning and development, the relation of state to industry, state-owned and operated industries, assistance to industry, establishment of industrial trading estates, tariffs, taxation and participation of foreign capital.

Government announced that the following 27 industries would be subject to Central Planning: Arms and ammunitions of war; Cement and Cement products; Edible Oil, hydrogenated or otherwise; Electrical communications and broadcasting equipment; Electricity including hydro-electric power; Electrical equipment, appliances and goods; Glass and Ceramics; Heavy chemicals; Iron and Steel; Machine tools, precision tools, gauges and workshop equipment; Manufactures of heavy engineering industry; Minerals including salt and coal; Non-ferrous metals and alloy manufactures; Paper, cardboard and pulp; Petroleum and mineral oils; Pharmaceuticals, dyes and light chemicals; Power and industrial alcohol; Preserved and prepared foods; Products of Carbonisation industry; Rubber manufactures; Scientific and mathematical instruments; Sea fish and its products; Ships, barges, river boats and lighters; Sugar; Tanned leather and leather goods; Textiles—cotton, woollen, jute, silk and rayon; and Tobacco.

AIMS AND OBJECTS

The statement on industrial policy said: "Pakistan is essentially an agricultural country, the bulk of whose people live and work in villages. Technical and technological institutions, research and analytical laboratories, and credit and service agencies, which one normally associates with an industrially developed country have yet to be organised."

The most striking feature of Pakistan's present economy is the marked contrast between its vast natural resources and its extreme industrial backwardness. For instance, the country produces nearly 75 per cent of the world's production of jute but does not possess a single jute mill. There is an annual production of over 15 lakh bales of good quality cotton but there are very few textile mills in the country. There is also an abundant production of raw material such as hides and skins, wool, sugarcane and tobacco, while the country's considerable resources in minerals petroleum and power also remain as yet untapped.

The aims and objects of the Industrial policy of the State were defined as "improvement in the standard of living of the people brought about by harnessing, to the maximum extent possible, the forces and treasures of Nature in the service of the people by providing gainful and legitimate employment and by assuring freedom from want, equality of opportunity, dignity of labour and a more equitable distribution of wealth. Free play will be given to private enterprise and individual initiative subject to certain conditions... In framing their policy the Government have been guided by the experience of other countries and their anxiety has been to avoid evils which have attended industrial growth elsewhere."

"In view of the predominantly rural economy of Pakistan, initial emphasis must perforce rest upon the reconstruction and development of agriculture and of industries based upon or connected with it; and on the promotion of medium, small and cottage industries. But the development of large-scale industries essential

to the security of the state or its general prosperity will also receive the utmost attention and encouragement."

The statement added: "Pakistan would therefore seek, in the first place, to manufacture in its own territories the products of its raw materials, in particular jute, cotton, hides and skins, etc. for which there is an assured market, whether at home or abroad. At the same time, to meet the requirements of the home market, efforts will be made to develop consumer goods industries for which Pakistan is at present dependent on outside sources. Some of the heavy industries might have to come at a later stage of the industrial programme, but no opportunity would be lost to develop any heavy industry which is considered essential for the speedy achievement of a strong and balanced economy."

Important legislation in connection with the planning of industries was passed in December 1948 and March 1949. The December legislation placed the entire control of mines and mineral development in the hands of the Central Government. The March legislation provided the planning of the 27 industries enumerated above to be under Federal control.

To enable the Centre to perform the responsibilities taken upon itself by this legislation the Government of Pakistan have recently set up a Development Board to co-ordinate development plans, Central and provincial, so that the available resources are put to the best possible use; to make recommendations regarding priorities among development plans, and to keep a watch on the progress of development schemes in order to remove bottle-necks and difficulties in the way of uniform progress in all fields.

A Planning Advisory Board has also been set up, consisting of representatives of the Central Government, the Provincial Governments and States and of special interests such as industry, trade, banking, labour, etc. to advise Government generally on matters relating to planning and development, to review the progress made in the implementation of the plans and to educate the public in regard to the necessity for various development schemes undertaken by the country. Industrial Panels and Committees have also been established by the Central and Provincial Governments and the working of detailed plans for various industries is in progress. It is hoped that as a result of the labours of these bodies the first phase of a seven-year development plan will emerge.

Regarding assistance to industry, the Government of Pakistan have made it absolutely clear that their role in industrial development will not be merely negative. On the positive side the Government would give all reasonable help for the establishment and development of private industry. Apart from the negative roles of maintaining peace and internal security and the establishment of stable administration, which are the essential pre-requisites of any economic development, Government will seek to create conditions in which trade and industry will prosper. Pakistan's considerable resources of minerals and mineral oil will be surveyed and energetically exploited. Schemes for development of the country's power resources are being worked out and their implementation will be given the highest priority. Plans for the improvement of the important ports of Chittagong and Karachi are in hand and steps are being taken to gear the transport services to the maximum efficiency. Measures are also being taken to increase the production of raw material required by industry and improve their quality.

The Government passed the Industrial Finance Corporation Act in December 1948 and a Corporation has since been set up with a capital of Rs. 3 crores. This corporation has been giving loans for development of cottage industries and other small industries. This loan would be repayable in instalments along with a nominal interest.

The Corporation has also been providing implements and other machines on hire purchase to small investors.

FOREIGN CAPITAL

Regarding foreign capital, the Government made it clear that they would welcome such capital seeking investment from a purely industrial and economic objective and not claiming any special privileges. Participation of nationals of Pakistan must however be ensured, both in the administrative and technical services manning the industry, and training facilities should be provided to Pakistan nationals by concern that wish to establish themselves in Pakistan. Where trading facilities rather than establishment of an industry are desired by foreign firms, subsidiaries should be registered in Pakistan. Government consider that in the national interest, nationals of Pakistan should ordinarily be given the option to subscribe at least 51 per cent of all classes of share capital in the following industries:—1. Cement; 2. Coal; 3. Cotton spinning and weaving mills; 4. Fish canning and fish oils; 5. Generation of electric power (other than hydro-electric); 6. Glass and Ceramics; 7. Heavy chemicals and dye-stuff; 8. Minerals; 9. Preserved and prepared foods; 10. Power alcohol; 11. Shipbuilding; 12. Sugar and 13. Tanning and leather.

With regard to other industries, an opportunity should normally be given to Pakistan Nationals to subscribe at least thirty per cent of all classes of share capital and debentures. But if in either case Government are satisfied that the required amount of indigenous capital is not forthcoming the balance might with their approval be subscribed by foreign nationals.

Clarifications of these principles were sought and late in 1948 the Government gave an assurance that the minimal percentage of indigenous capital did not apply to existing units nor to any transfer of an established business nor to foreign companies which start subsidiaries in Pakistan and engage solely in trading activities and no industry. If however a trading company established in Pakistan wishes to expand its activities and undertake industrial production, the appropriate association of indigenous capital in the additional issue will be required.

Private limited companies would be on the same footing as public companies in regard to participation of indigenous capital.

The Government also made it clear that there was no intention to place any restrictions on the remittance of "reasonable proportion of profits". The only restrictions, said the Government, on the remittance of such profits would be those of general application arising from foreign exchange limitations and policy to which such remittances are subject everywhere.

The Government in a statement issued at the time said: "Cases have come to notice where direction and control which would naturally accrue to Pakistanis from their share in the capital of a business is diverted by a managing agency agreement which secures control to the foreign element in the business. If the object of such control is the maintenance of the quality of a product and of the standards of raw materials, Government would be prepared to condone this diversion and to let the managing agencies work to the primary objective of creating Pakistani administrative and executive control of the industry during the next ten years."

About the participation of foreign capital in the petroleum industry Government decided that an opportunity should normally be given at the development stage to Pakistan nationals to subscribe at least thirty per cent of all classes of share capital and debentures. If as in the case of other industries, Government are satisfied that the requisite amount of indigenous capital is not forthcoming, they would permit the balance being subscribed by foreign investors.

COTTON

The Indus valley has been the home of cotton cultivation from time immemorial. The recent excavations at Mohenjo Daro in the Larkhana District of Sind have brought to light among the relics of prehistoric civilisation a small piece of fabric and a length of string which have been conclusively proved to be made of cotton. Other evidence showing that cotton was grown in the Indus valley in ancient times are the Babylonian and Greek words for cotton, Sindhu and Sindon.

More than four-fifths of the world production of cotton is concentrated in the U.S.A., India, China, the U.S.S.R., Brazil, Pakistan and Egypt. The total exports of cotton from the Pakistan areas (in undivided India) including cotton received by the Indian mills, amounted to 1,540 thousand bales, which is 15 per cent of all cotton entering the international market. Indian mills absorbed over a million bales of 478 lbs. each, over two-thirds of Pakistan's total cotton exports. The annual production is about 1,500,000 bales of 400 lbs. each. The total area under crop is about 3,001,000 acres.

Export of cotton to countries other than India from August 1947 to July 1948 totalled Rs. 820 millions.

The cotton grown in Pakistan may be classified into two broad groups: Desi (indigenous) and the American varieties. The American varieties occupy the bulk of the cotton area of Pakistan (about 80 per cent) and have found favour with the West Pakistan farmer on account of their better yield per acre and higher prices. Due to their superior spinning qualities and longer staple lengths, these varieties are greatly in demand in the textile industries of the world for manufacturing cloth of finer counts.

The trade has however classified the American varieties of Western Pakistan cotton into the following three groups:

1. 4 F, where F stands for Foreign. This has a standard staple length of not less than 34 inches and its highest standard warp count is 24.
2. L.S.S. where the initials stand for Labh Singh's Selection. This is a selection from 4 F made by Sardar Labh Singh, Deputy Director of Agriculture, Lyalpur in 1928. It has a standard staple length of 27/32 inches and its highest standard warp count is 40. The chief defect of this variety is its late maturing quality which is a drawback from the water supply aspect and which also renders it liable to damage by early frost.
3. 280 F.N.T., where the initials stand for "Foreign New Type." This group comprises American varieties with staple lengths of not less than 7 7/8 inches. The actual staple lengths of the various varieties included in this group extend to over one inch. During the pre-war period 4 F occupied the bulk of cotton area under American varieties. During the war period, however, 280 F.N.T. came to the forefront and covered over half the area under American varieties. This change which was stimulated by war time conditions has come to stay during the post-war period. 4 F now covers a little over one-tenth of the area under American varieties and the balance is covered by 280 F.N.T. and L.S.S.

There are a number of cotton research stations in Sind and West Punjab. Lyalpur Central station originally conducted all research work but sub-stations were later opened at Multan, Khanawal and Jhang. In Sind research stations at Mirpurkhas and Sakrand are doing useful research work in connection with the selection, breeding and expansion of improved varieties. A Pakistan Central Cotton Committee has now been established to carry on the direction and control of all such research work.

There is no cotton textile industry in Pakistan worthy of the huge quantities of excellent cotton grown in the country. At the time of partition there were 14 textile mills, with 4,874 looms and 184,016 spindles. Nine of these were in East Bengal, four in West Punjab and one in Sind.

The Pakistan Industrial Conference convened late last year by the Government at Karachi recommended a target of one million spindles for installation during the next five years. The successful completion of this project will go far towards solving the cloth problem of the country and will bring employment and prosperity to a large number of its people.

Government have indicated that it would undertake the construction of textile factories if private capital was not forthcoming.

Private capital has, in fact, been made available, and orders are being executed in U.K. and other countries for textile machinery. More than a lakh of spindles have been purchased from Japan.

Even at present cotton ginning and pressing factories account for about one-fourth of the total industrial employment in the country. There are 322 factories in Pakistan, 244 of which are in the West Punjab. All raw cotton is exported after being ginned and pressed into bales. The gross weight of a Pakistani bale is 400 lbs. about 392 lbs. net after allowing for the weight of hessian wrapping and iron hoops. The dimensions of a bale are about 48 inches by 18 inches with a density of 45 lbs. per cubic foot, compared with the U.S. 35 lbs. and the Egyptian 23 lbs.

An important provision of the Factories Act is that the owner must put a distinct mark and serial number on every bale. Thus any imports in any land can bring to book the owner of a ginning and pressing factory even six months after the purchase if it is proved that a bale contains a mixture of a variety inferior to what it purports to be.

JUTE

Jute is one of the most important commercial fibres grown in the world today. In bulk its annual production ranks second only to that of cotton. The province of East Bengal, in Pakistan, accounts for about 80 per cent of the total world production, although the acreage under jute is only 8 to 10 per cent of the cultivated area. The exports of raw jute constitute about 75 per cent of the total value of Pakistan's exports; and this extremely valuable crop is obtained only from four per cent.

Jute is extracted from plants of the genus *Corbhora*. The plant is an annual, growing in a single stem, without branches or twigs until it reaches maturity. It consists of a woody stick surrounded by a bast layer in which the fibre is developed. It grows to an average height of 8 to 10 feet, the yield varying according to the District, soil, river and weather conditions and seed employed. An average crop produces about 1,300 lbs. of fibre per acre but yields as high as 2,500 lbs. have been recorded.

There are various qualities with different trade-names, the variation in quality usually being attributed to the district in which the jute is grown or the method by which the jute fibre is extracted.

Sowing commences in February in low-lying lands and on the highlands as late as May. *Capsularis*, the white jute, varies in colour from white to dark grey, largely depending on the water in which the plants are soaked. It is grown on both high and low lands, sown early and harvested from June to September. The *Olearius* fibre is of a finer texture, stronger than white jute and varies in colour from golden yellow to slaty brown, also being influenced by the water; it is mainly a highland crop, sown later than white jute and harvested in August and September.

The flowering time of the plant is considered best for yield, though earlier cuttings may give finer qualities. After cutting the plants are tied up in bundles and left for about three or four days to allow the leaves to drop off. The bundles are then submerged in water and allowed to remain for ten days to three weeks. This process called "retting" results in the fermentation of the soft pith of the plant, which dissolves and

leaves the fibre, which can then be easily separated from the stick. The fibre is then washed, dried, and made ready for sale and transport.

Pakistan produces nearly 80 per cent of the world's jute but has a 100 per cent monopoly of the really fine varieties of the fibre, grown largely in the Districts of Mymensingh, Dacca, Comilla, Faridpur, Pabna, Bogra and part of Rangpur. Mymensingh grows about 25 per cent of the total crop.

Jute is a regulated crop and the acreage is controlled by Government.

While Pakistan has a virtual monopoly of jute production, India has almost all the jute mills which are concentrated round Calcutta. The Calcutta mills are naturally the largest importers and consumers of raw jute from Pakistan, requiring a minimum of 4,500,000 bales a year.

The importance of jute to undivided India's economy is indicated by the fact that the exports of raw jute and jute manufactures constituted about one quarter of the total value of India's export trade, earning 92 million dollars in 1945-46.

The United Kingdom imports from 20 to 25 per cent of the quantity exported from Pakistan. The manufacturers of Dundee produce a wide range of fabrics, yarns, twine and specialised lines for export such as hessian and sacking, tarpaulins, carpet, backing, linoleum cloth, rugs, upholstery, foundations, buckram, etc. For these Dundee requires superior qualities of jute grown in East Bengal only. In 1948 about 28 per cent of the total exports of raw jute from Chittagong went to the U.K.

The U.S.A. specialises in the manufacture of fine yarns, twines and all types of cordage; East Bengal supplies the bulk of U.S.A. requirements of high grade jute fibre for these manufactures. The pre-war annual average of imports varied from 60,000 to 80,000 tons, representing 10 to 15 per cent of undivided India's jute exports. During the last year about 22 per cent of Chittagong's export of raw jute went to the U.S.A.

Belgium is Pakistan's third best consumer of raw jute. This country imported during 1948 15 per cent of Chittagong's export closely followed by Italy which imported about 14 per cent. Another country which imported jute last year from Chittagong was France. It accounted for about 11 per cent of Chittagong's exports. Brazil, Argentina, Australia, Poland, Czechoslovakia and the Scandinavian countries were among other importers of jute during 1948.

A pucca bale normally weighs 400 to 410 lbs. and is packed by hydraulic presses to a density of 104 cubic feet. A kutcha bale is loosely packed by hand or steam presses and ranges in weight from 120 to 320 lbs.; the 280 lbs. bale being the most common. The carrying capacity of a meter-gauge railway wagon is 50 standard pukka bales and 80 to 40 kutcha bales. The Government of Pakistan has made arrangements for the import of baling presses and it is hoped that eventually the uneconomical kutcha bales will be eliminated from the export trade.

Arrangements are also being made with the help of the Government to import machinery for setting up jute mills in Pakistan. At present there is not a single jute mill in the whole Dominion.

WOOL INDUSTRY

Next to Jute and Cotton, the most important fibre in Pakistan is wool. Pakistan produces 28.5 million pounds of wool per year and imports through its land frontiers another 8 million pounds. Baluchistan alone exports about 1,800 tons of wool worth Rs. 30,00,000 every year. The wool is of eight main varieties, namely Harnal, Hibriki, Baluchi, Kharani, Taraki, Shanwari, Khandliari and Regl. The Harnal and Hibriki species have an international reputation and fetch good prices in the Liverpool auctions. Pakistan wool is used in the manufacture of tweeds, rugs, carpets and blankets. Two million pounds of wool is required for use by the local

cottage industry for the manufacture of rough blankets and carpets. Government has decided to assist in establishing five yarn spinneries for spinning yarn with a total spindleage of 25,000 spindles. Two of these spinneries will be located in West Punjab and one each in the North-West Frontier Province, Baluchistan and Sind. These spinneries will produce 4.5 million pounds of yarn annually. Government also propose to assist in the opening of finishing centres in all these regions, each centre comprising two sets of raising and finishing machines.

In order to meet the Pakistan requirements of worsted yarn and fabrics, Government propose to permit the establishment of mills of a capacity not exceeding 20,000 spindles in the first instance—10,000 in Karachi and 10,000 in the West Punjab or the N.-W. F. P. These mills will produce 1,000,000 lbs. of worsted yarn annually.

Permission has been given to two parties to set up woollen and worsted mills, one at Karachi and the other in West Punjab. It is expected that the Karachi mill will be in production by the end of this year.

SPORTS GOODS

For three quarters of a century, the name of Sialkot has been synonymous with sports goods. Champions have wielded its rackets on the Centre Court at Wimbledon while its hockey sticks have brought fame to teams from undivided India. In addition to sports goods Sialkot also produces surgical instruments, cutlery, EPNS ware and several other articles.

A special kind of wood and superior tanned leather are two essential materials required for the manufacture of sports goods, and both are available in abundance in Pakistan. White and yellow mulberry wood, which is used in the manufacture of about 80 per cent of tennis rackets, badminton rackets and hockey sticks comes from the N.-W.F.P. and the States of Dir, Swat and Chitral and is found nowhere else in the whole sub-continent. Sialkot draws all its supplies of essential wood from these areas. The skilled labour of the city has always been predominantly Muslim and remained in Sialkot after partition.

Pakistan has plenty of hides and skins—including some of the world's best and the establishment of tanneries is now going forward very quickly.

The U.K. leads the list of importers of Sialkot sports goods with over 39 per cent of the total export from Pakistan. Australia comes second with over 9 per cent. U.S.A. comes next with about 8 per cent. India is a close fourth. Among sports goods Cricket bats are the ones which are most in demand.

SURGICAL INSTRUMENTS

At a critical stage in the Second World War, when surgical instruments were unobtainable elsewhere, Sialkot came to the rescue and made a notable contribution to the Allied war effort, saving many thousands of lives. The surgical instruments manufactured at Sialkot have been widely approved for the design, the fineness of the material and their general soundness. Experienced workmen possessing great skill are employed in the factories and every instrument is manufactured under expert supervision.

The value of the annual output of surgical instruments at Sialkot during the pre-war period has been estimated at about Rs. 4,00,000; during the war years it exceeded Rs. 35,00,000. With the termination of war there has been an inevitable decline in production but it remains higher than the pre-war level. Pakistan's main customers are the Indian Union, Middle-Eastern countries, East Africa and Burma. Many other countries import smaller quantities.

HEAVY CHEMICALS

Three sulphuric acid plants, two of 10-ton capacity and one of 20-ton capacity will soon be operating in Pakistan. They will be located at Karachi, Lyallpur and Rawalpindi.

A 10-ton plant for the production of Caustic Soda by the electrolytic process is likely to be established in the near future. This plant will produce 8.8 tons of chlorine per day which, apart from meeting Pakistan's requirements of this chemical for chlorinating water, will help in the manufacture of bleaching powder and other products like I.D.T. based on chlorine as the starting material. Another 4 mercury cell plant capable of producing approximately 6 tons of chlorine per month is also being set up.

There is a Soda Ash Plant at Khewra with a productive capacity of 20 tons of light soda ash per day. The soda ash in excess of the requirements of Pakistan is exported to India.

PHARMACEUTICALS

Pakistan is rich in some of the herbs required by the pharmaceutical industry. It has also substantial quantities of alcohol from molasses for conversion into tinctures like iodine, etc. The Pakistan Government have established laboratories to manufacture vaccine, sera, etc. Ephedrine is now made from ephedra which is found in Baluchistan. Two units for the manufacture of santonin from Artemisia of the Kurram Valley (N.-W.F.P.) are being planned by two industrialists.

GLASS

The glass industry in the sub-continent was initially started in 1892 at Jhelum (West Punjab). Pakistan's annual requirements are estimated at 21,000 tons of glassware and 7 million tons of sheet glass. Production capacity is about 3,000 tons of glass ware per annum. There are three factories working in Western Pakistan and two in Eastern Pakistan which are mainly producing containers, pressed and blown table wares. A few small units are being erected in West as well as East Pakistan to produce bangles and hand operated hollow-ware. The most significant development however is the installation of a twenty-ton-a-day full automatic plant for production of hollow-ware. The plant will be in production by the end of 1949, and will add about 9,000 tons to the existing capacity. The plant will include a tube drawing machine and equipment to make lamp shells which are being imported at present from abroad. It is also intended to install a sheet glass factory using the Forcalt process which will go a long way to meet Pakistan's requirements.

FRUIT INDUSTRY

The N.-W.F.P. is sometimes described as the California of Pakistan while the fruit drinks of West Punjab have as wide a reputation.

The total area under fruit cultivation is about 400,500 acres, of which 200,000 acres are in East Bengal, 150,000 acres in West Punjab, 50,000 acres in Sind, 80,000 acres in Baluchistan and 1,500 acres in the N.-W.F.P. The estimated annual production is 70,000,000 maunds worth Rs. 100,00,00,000 (about \$75,000,000). Approximately 40 per cent of the fruit is consumed within Pakistan in fresh condition, 15 to 30 per cent is used in canning and preservation industry and the rest is exported to India and other adjoining countries, either in fresh condition or after drying and processing.

Fruit varies from the world's best bananas of Munshiganj (East Bengal) and the Sylhet Orange to the peaches and plums of N.-W.F.P., the grapes of Sind, the grapes, apples, cherries, apricots and muskmelons of Baluchistan, the dates of the Makran Coast and of Bhawalpur, the mangoes, lemons, sweet limes and "Malta" oranges of the West Punjab plains and the pears grown as far north as Peshawar.

Pakistan has thus a great variety of fruit and some of it is so cheap that the poorest labourer can afford to buy it.

East Bengal grows 43,565,000 maunds of bananas every year. The N.-W.F.P. has the same latitude, elevation and variations of climate and produces the same varieties of fruit as California. Perhaps in some respects the N.-W.F.P. is even more advantageously placed,

than California as it has areas which can produce tropical fruit such as mangoes, bananas, and litchis which are not grown in temperate zones.

To raise the standard of fruit preservation, the Government passed the Fruit Products Control Order. Under this order no factory can manufacture fruit and vegetable products unless it is licensed and agrees to abide by certain quality standards and sanitary and hygienic requirements in the factory premises as laid down in the order. The Fruit Products Control Order is a check on malpractices and as such has played an important part in making available genuine and wholesome products prepared under sanitary and hygienic conditions. At present there are nearly a hundred license holders in the country. The check samples are analysed at the Central Control Laboratory at Lyallpur.

TEA INDUSTRY

The Sylhet and Chittagong districts of East Bengal are the only two tea producing areas in Pakistan. Pakistan has been allotted a standard acreage of 76,700 acres and the export quota as fixed under the International Tea Agreement is 35 million lbs. In Pakistan there are at present 133 gardens and the annual production is estimated to be about 50 million pounds.

Early this year, Mr. Fazlur Rehman, Minister of Industries and Commerce, called a conference of tea interests at Sylhet, where he announced that the Government of Pakistan proposed to constitute a Statutory Licensing Committee which will be responsible for regulating acreage and exports within the limits prescribed by the International Tea Agreement. A Pakistan Tea Board is being set up.

The new crop is estimated at 45 million pounds and the carry-over of unsold 1948 crop at 5 million lbs., a total availability of 50 million lbs. for sale and clearance between April 1949 and March 1950. The export value of the tea crop is thus of the order of Rs. 5,00,00,000 and the trade pays about Rs. 1,00,00,000 in direct revenue to the Government.

Pakistan's best tea customer is the United Kingdom, which makes bulk purchases through an agent of the U.K. Ministry of Food under a contract.

To facilitate and encourage industrial development in general the Sind Government have undertaken the construction of three Industrial Estates situated at Karachi, Hyderabad (Sind) and Sukkur. These Trading Estates aim to provide the services necessary to enable manufacturers to establish their factories with the minimum trouble and delay. All sites are leased out on a rental of approximately Rs. 750 per acre and leases may be obtained for any period desired up to a maximum of 99 years with options for renewal if necessary.

COTTAGE INDUSTRIES

Apart from the regular artisans who invariably form an important part of a village community, the peasantry is often engaged in some suitable cottage industry during the slack season. The industry is financed either by professional financiers, who purchase raw materials and supply them to workers or by middlemen advancing loans to artisans who purchase their own materials and sell the products to dealers who are either wholesalers or retailers, or the industry is self-financed and sold direct to consumers.

The main products of cottage industries are footwear, leather goods, leather curios, glue, guts and casings.

Hand spinning and weaving as a cottage industry is carried on all over Pakistan especially by women as a part-time occupation. In East Bengal women earn their livelihood by spinning and weaving. Dacca and Chittagong in Eastern Pakistan are the chief centres. The Dacca Muslims were world famous at one time. The Government have today given a fillip to this industry by establishing a Spinners' Association. Jute spinning and weaving is a valuable cottage industry in East Bengal. A spindle is used for turning the jute fibre into thread. In one day

over two lbs. can be made into yarn. Some families have been engaged in this industry for generations. After spinning the yarn, the men turn it into twine or ropes. A primitive loom is used for making gunny bags. Of late the Government have been trying to popularise modern appliances and demonstration parties have been visiting the people engaged in this industry with a view to training them up in the use of modern methods.

The silk industry in East Bengal is not negligible. "Chikan" and "Kasida" are two well known varieties of Dacca silks. "Phulkari" in West Punjab and "Makrani" in Sind are made of silk in multifarious colours. The N.-W.F.P. has the "Kohat lungi" as an important cottage industry. Patterns are distinctive for each clan or "Klud." "Chikan doz" of Peshawar and some patterns done on muslin are of exquisite fineness and beauty.

Peshawar is famous for copper-ware done on Persian models. Much work is done over Pakistan and consists of work in brass, bell metal, copper, iron, gold and silver.

The Pathans are extremely clever at metal work. One Frontier mechanic has succeeded in producing sewing machines entirely by hand. Rifles and revolvers are made by tribesmen on

a cottage industry basis both in the Khyber and the Kohat passes. On the artistic side gold and silver work is done in all the provinces of Pakistan. At Dacca filigree work is done to perfection. What is called the "Bidri-work" of East Bengal consists in inlaying of silver with a kind of copper. In the West Punjab enamelling is very popular.

Woodwork in Pakistan ranges from simple photo-frame to up-to-date furniture. Exquisite carvings on furniture, windows, screens and doorways are met with throughout the Dominion. The standard of carpentry is high and stands comparison with the best in the world.

Tanning and leather goods form an important item on Pakistan's cottage industry list. Side by side with rough and partial tanning there is high class tanning and chrome leather manufacture. Shoes, slippers, belts, purses, suitcases, portmanteaus, saddles, drums, bellows, etc., are produced. Glue making is a side industry of tanneries. In West Punjab hides and skins are tanned in small cottage tanneries by indigenous processes.

The village potter turning out a pot a minute, as it were, is a familiar figure all over Pakistan. The chief raw materials used are clay and sand. They are baked in a kiln which burns

any available cheap fuel. The primitive potter's wheel is still being used. Earthenware cooking vessels, tea cups, pots and pans and "hookah tops" are found in every village home. Easily cleaned and cheaply replaced made by local labour from local raw materials they are well suited for villagers' needs. In East Bengal tile and brick-making is an important branch of the potters' work. So is toy making. Baking is done in earthen jars so as to prevent direct contact with the flames.

Paper making is a supplementary occupation. Some of those engaged in agriculture during the summer and the rainy season are busy with paper-making in the winter. The raw material used is waste paper cuttings from book binders, as well as rags, old gunny cloth, fibres, and fishing nets. The three popular varieties of paper are document, kite and blotting paper. The special feature of such paper is its durability.

Bangles, combs, necklaces, caskets, buttons, paper weights are made in Lahore in East Bengal where no less than 80 different tools are used. Ivory work is also done at Lahore by means of simple tools such as chisels and knives.

Conch-shell work is done at Dacca. Buttons, bracelets, bangles, chains, rings and small images are made out of conch shells.

MINISTRY OF ECONOMIC AFFAIRS

THE Ministry of Economic Affairs responsible for economic planning and day to day co-ordination in economic matters has had to add a new "Economic Policy Branch" during the year to cope with the increased volume of work.

The Development Board, under the Ministry examined various schemes on a number of subjects. The main schemes examined by the Board were: Development of hydro-electricity and other forms of power; Maintenance and expansion of communications; Exploitation of mineral wealth; Reclamation of land; Establishment of basic and key industries; and Training of technical personnel.

The Board gave special consideration to those schemes which were regarded either productive or essential to the economy of Pakistan or such schemes as were already under execution and could not be given up without a disproportionate loss of money and material. The Board sanctioned such schemes, assigning priorities, wherever it was thought necessary.

In all 143 schemes relating to industry, irrigation, agriculture, communications, etc. were examined by the Board. Fifty-one of these schemes were approved by the Board. These schemes involved an expenditure of nearly Rs. 12 crores by the provinces and Rs. 1 crore by the Centre during 1948-49. The total cost of the 51 approved schemes, spread over a period of five years, comes to about Rs. 48 crores, of which the provincial share will be Rs. 39.74 crores and the Central share Rs. 8.72 crores. The money sanctioned was distributed as follows: 169 crores for the development of industry, about Rs. 14 crores for Communications, Rs. 14 crores for Irrigation, and about Rs. 3 crores for Public Health. These amounts, it may be mentioned, are over and above what the Provincial Governments have provided, or may provide in their budgets, as normal expenditure on these subjects. Since the development of industries in Pakistan is largely through private enterprise, the allocation under this head is meant only for such measures by Government as may aid industrial development.

An Industrial Finance Corporation with a capital of Rs. 3 crores to assist private enterprise in starting new industries has also been set up, while provision for a sum of Rs. 4 crores in the Budget Estimates for 1949-50 has been made to provide finance for giving a lead in the matter of establishing certain essential industries for which private capital may not readily be forthcoming.

The execution of Development Schemes rests mainly with the Provincial Governments and to enable them to do so, the Development Board recommended an advance of loans to Provincial Governments for expenditure in 1948-49 on approved development schemes to the extent of Rs. 12 crores. Provision has also been made in the Budget Estimates for 1949-50 for a sum of Rs. 1 crore for giving outright grants to Provincial Governments for financing such agricultural projects as may be agreed between the Central Government and the Provincial Governments, and an amount of Rs. 10 crores for giving development loans during 1949-50.

DEVELOPMENT SCHEMES

Special mention may be made of the following approved schemes:

Schemes for the eradication of disease and pests in crops; survey of medicinal herbs and plants found in the N.-W.F.P., Baluchistan and Tribal Areas and for developmental research in the fields; construction of a fish harbour at Karachi; establishment of seed multiplication farms in Baluchistan; development of Chittagong port; development of tele-communications; construction of roads; expansion of Malakand Hydro-electric Works, Karnafull Hydro-electric Project in East Bengal; Rasul Hydro-electric Project in West Punjab; Dargai Hydro-electric Project in the N.-W.F.P.; Thal Irrigation Project in West Punjab; Rasul Hydro-electric Tube Well Project in West Punjab; Anamber Weir Project in Baluchistan; Toghia Nala Irrigation Scheme in the N.W.F.P.; thermal electric stations in East Bengal and West Punjab; increased supply of water to Karachi; the Fatima Jinnah Medical College for Women in Lahore; Bureau of Laboratories at Karachi for the manufacture of sera, vaccines, etc.; a Central Testing Laboratory in Karachi for testing all types of industrial products; the improvement of Shraigh Coal-mines in Baluchistan; Industrial Trading Estates at Karachi, Hyderabad (Sind) and Sukkur; Pakistan Animal Husbandry Research Institute; a Department of Scientific and Industrial Research Institute; a Central Cotton Committee and a Central Statistical Organisation.

Almost all the above schemes are now under execution, and in some cases considerable progress has already been made. These schemes besides possessing other advantages, are expected to increase the area under cultivation by over four million acres and provide more than 100,000 kW of electric power during the next five years.

PLANNING ADVISORY BOARD

At the first meeting of the Planning Advisory Board, it was recommended that the Government should undertake the formulation of a five-year plan and dovetail schemes into this plan. The question of machinery required and the procedure to be adopted in the implementation of this policy is under consideration and a draft plan is being prepared.

Other schemes which are under consideration are: The geological survey of Pakistan, better utilisation of Pakistan coals, development schemes in the adjoining States, employment of foreign technicians, development of tribal areas, development of Baluchistan, industrial policy and measures required for speedy industrialisation of the country, necessity of preparing a Development plan for the next five or ten years and the reconstitution of the Planning Advisory Board to provide larger measure of representation to non-officials.

Arrangements were made with the Government of the United States of America for a credit of 10 million dollars to enable the Government of Pakistan to purchase surplus stores of War Assets Administration of U.S.A. For various reasons, however, it was not possible to make full use of the credit and purchase to the extent of 1,37,000 dollars only of medical stores and equipment were made and in view of the small amount involved were paid for in cash. Those stores have been received in Pakistan and have been distributed by the Director-General of Medical Services, Ministry of Health.

The import policy which had been followed in the first year of the establishment of Pakistan was liberalised during the period that followed by reducing the number of items on the banned list, adding a large number of items to the open General License List and increasing the ceiling of items to be imported from hard currency areas. The effect of the liberalisation of the import policy was that prices of several commodities have shown a downward trend, while goods of different categories are now available to the public. To check any tendency of a rise in prices and to prevent unscrupulous persons from exploiting the situation, the Hoarding and Black-Marketing Act, which prescribes severe penalties for the anti-social acts of hoarders and profiteers in the black market, was passed by the Legislature. This measure has had a very steady influence on the market.

TRADE AGREEMENTS

The Ministry of Economic Affairs has been associated with the trade agreements and negotiations with India and other foreign countries, viz., Poland, Czechoslovakia, Yugoslavia, Japan, Belgium, Italy, and Iraq. In some cases agreements have already been reached and ratified by the countries concerned.

During Mr. Ghulam Mohammad's visit to the U.K. in the summer of 1948, an agreement between the Government of Pakistan and Messrs. Darwin Ltd., for setting up a plant for the manufacture of Alloy Steel was drawn up. Negotiations with the General Electric Company (U.K.) for setting up a factory for the manufacture of electrical equipment in Pakistan have nearly been completed. Negotiations are going on with Messrs. Steel Brothers and Company for the extraction of timber from forests in East Pakistan. The Finance Minister also negotiated with certain firms both in the U.K. and France for providing technical training to young Pakis-

tan nationals. These facilities have since been offered by Messrs. G.E.C., the Manchester College of Technology, Messrs. Darwin Ltd., and Monsieur J. De Sally in France. The Federation of British Industries have also agreed to grant training facilities to Pakistani nationals.

The Ministry has also been associated with the work of the United Nations and its subsidiary bodies. References received from United Nations about economic matters have been dealt with by the Ministry. After the third session of the ECAFE held in Goteaburg, the ECAFE set up three Study Groups with a view to investigating the industrial, financial, and agricultural problems confronting the region and for proposing suitable steps for the quick economic development of this region. Pakistan was represented on all these three Study Groups by representatives briefed by the Ministry of Economic Affairs.

The Pakistan Spinners' and Weavers' Association, which was set up with the main object of encouraging hand spinning and hand weaving

with a view to relieving the acute shortage of cloth and providing employment to a large number of weavers, especially those who came over from India to Pakistan, continued its operations. The provisional constitution of this Association was finalised. The Association has now set up its branches in most of the provinces, and in West Punjab District branches have been formed. All these branches are functioning well. Training classes have been held in Karachi. The production of handloom cloth in Pakistan has however received a set-back with the imports of fairly large quantities of handloom cloth from India. Measures to deal with the situation are under consideration.

The Ministry also prepared estimates of the national income of Pakistan for the years 1938-39, 1940-41 and 1945-46 and steps are now being taken to prepare an estimate for 1947-48. Other work which the Ministry undertook included a study of the price trends of foodgrains, cloth, sugar, coal, imported goods, kirayana goods and raw materials.

LABOUR

LESS than one per cent of the total population of Pakistan is employed in organised industry. According to Government estimates the number of industrial workers in the country is just over 650,000. The strength and distribution of labour employed in the various categories can be seen from the table given below:—

| | |
|-----------------------------|----------------|
| Factory Industries Group .. | 200,000 |
| Plantations (Tea) .. | 150,000 |
| Railways .. | 150,000 |
| Mercantile Marine .. | 125,000 |
| Docks .. | 15,000 |
| Mines .. | 7,000 |
| Others .. | 15,000 |
| Total .. | 662,000 |

It is extremely difficult to assess the number of landless agricultural labourers and wage-earners employed in quasi-agricultural home and cottage industries but there is no doubt that it runs into millions. The problem of raising the standard of living of Pakistani workers both industrial and agricultural is one which the Government is giving the highest priority.

The present labour laws of the country are the same Labour Acts as were in force in India at the time of the partition. The Dock Labourer Act of 1934 has since been enforced and regulations under it issued. The provisions of the Payments of Wages Act have been extended to coal mines and oil fields and it is proposed to extend them also to salt mines, chromite labour and dock labour. The purpose of this Act is to ensure payments of wages with reasonable promptitude and without unauthorised deductions. The policy of the Government is to exercise their powers under this Act to the fullest. The provisions of the Mines Act will shortly be applied to oilfields also, while a Bill is under consideration for fixing minimum wages in sweated industries. Two more bills which were outstanding in the Indian Central Legislature at the time of partition viz., a Bill for compulsory recognition of Trade Unions and another for providing State Insurance to certain classes of workers in respect of accidents, occupational diseases, maternity benefits and sickness, etc., are under consideration by the Pakistan Government and will be introduced in the October session of the Legislature.

The Labour Division of the Ministry of Law and Labour is entrusted with the duty of maintaining the industrial peace of the country,

setting up conciliation machinery for State undertakings and other industries in the Central sphere of labour for all engaged in industry. It is also the responsibility of the Ministry to ensure a free flow of technical personnel for Pakistan's industry for which purpose a number of technical and vocational training schemes have been put into operation.

The Technical Training scheme which was inherited from undivided India has been converted into Training-cum-Production Scheme. The students under this scheme are given training in manufacturing a limited number of marketable utility articles in a period ranging from one to two years. After training a student will be given reasonable facilities for procuring raw materials, sale of finished goods and solving other practical difficulties, if he desires to establish an independent cottage industry. Six training centres have been reorganised in this manner without incurring heavy expenditure.

Housing, hours of work, wages, education of women and their children, recreation, employment of women and children are also problems which are engaging the attention of the ministry.

EMPLOYMENT EXCHANGES

The most important executive organisation of the Ministry is the network of Employment Exchanges spread all over the country. The Employment Exchanges were originally intended to assist in the task of resettling demobilised soldiers and discharged war-workers.

With the influx of millions of destitute refugees from across the border, the scope of the Employment Exchanges was widened to include the resettlement of refugees along with ex-servicemen, technical and other essential personnel. Assistance to employers in finding suitable men and in particular in enabling them to fill the vacancies caused by the departure of non-Muslim staff, the adjustment and absorption in alternative employment of the surplus staff of the Government, were other matters entrusted to the Employment Exchanges.

In the whole of Pakistan there are at present 23 Employment Exchanges distributed as follows:—Karachi 1; Sind 3; Baluchistan 1; West Punjab 10; N.W.F.P. 2; East Bengal 4; Central Exchange Head Quarters—1.

With a view to facilitating the registration of refugees, 18 sub-offices were opened at Refugee Camps in West Punjab and six in Sind. The managers and the publicity officers of the Employment Exchanges undertook canvassing

tours to try to persuade employers to engage refugees and explored other avenues of employment for them. During the period between 15th August 1947 and 31st December 1948, the Employment Exchanges registered 288,297 workers, out of which 93,134 were placed in suitable employment. Up to 15th January 1949, the Employment Exchanges placed 48,288 refugees in employment out of a registered total of 166,820.

As a result of experience gained in resettling refugees, the scope of the service has been still more widened to include all categories of employment-seekers. Special sections have been set up in some exchanges to deal with special categories of employment-seekers such as women, disabled personnel and persons possessing high technical and scientific qualifications.

With a view to making the service available to a larger proportion of the population, the Government is shortly increasing the number of Employment Exchanges from 23 to 28. Future plans envisage a country-wide network of Employment Exchanges with an office in each District and important Tehsil or subdivision. The ultimate aim of the organisation is to promote full employment in the country.

LABOUR WELFARE

For the collection of authoritative material on Labour questions, a Labour Bureau has been set up whose main function is to collect statistics relating to labour, including the cost of living index numbers. Family Budget enquiries into the cost of living of industrial workers have already been completed at Karachi, Lahore, Sialkot, Khewra and Narayanganj and it is proposed to conduct two more exhaustive enquiries at Chittagong and Mardan. The data thus collected will be used for the construction of the cost of living indices for these places.

Labour welfare activities are essentially provincial subjects except for Central undertakings which are the charge of the Central Departments concerned. The Labour Ministry, however exercises a supervisory control as regards statutory obligations through its Central Labour Commissioner. Some of the important undertakings directly under the control of the Central Government are Railways, Coal Mines in West Punjab and Baluchistan, the Salt Ranges at Khewra (West Punjab) and major ports.

Labour Welfare on the Pakistan Railways received special attention during the last year. Both the Railways, viz., the North Western

Railway and the East Bengal Railway have Welfare Organisations which are responsible for maintaining unimpaired the standard of welfare of workers and for recommending improvement and extension of the various amenities supplied. The measures taken for the welfare of Railway Labour include safety, health and protection measures and the establishment of cheap tea and cooked food canteens. Medical aid is rendered by 54 hospitals and dispensaries on the N.W.R. and 48 on the E.B.R. These hospitals are equipped specially for attending to accidents. In some centres X-Ray plants and mobile medical vans are maintained.

Recreational facilities for staff during the mid-day breaks are made available and include the broadcasting of news and music. There are also facilities for sports, education and convalescence and other beneficial institutions; like co-operative stores and co-operative credit societies. A large number of employees are provided with houses but a distinction is made between essential and non-essential staff in this matter.

In the Salt Mines at Khewra labour welfare activities include medical aid, maternity and child welfare facilities, education for miners' children and the provision of transport to and from work.

A Salt Miners' Welfare Fund financed through an annual budget grant from the Central Government is devoted to the improvement

of sanitation, provision of water supplies and a general improvement of living standards.

Recreation facilities, including lay-out and maintenance of playing fields, establishment of a Miners' Institute, reading rooms and grants to sports clubs are also financed from this fund. Immediate plans include the setting up of an ice factory, provision of warm baths at the mine entrances and canteens for miners and surface workers.

In accordance with a resolution of the Special Maritime Labour Conference of the International Labour Organisation, held at Seattle in 1946, the Government of Pakistan, since its inception, has accepted full responsibility for the welfare of seamen of all nationalities at Pakistan ports.

A Directorate of Seamen's welfare has been established which supervises on behalf of the Government all Seamen's welfare activities throughout Pakistan. This Directorate is charged with the planning and control of seamen's (all nationalities) welfare in Pakistan and of Pakistani seamen abroad. Welfare officers have been appointed under the Directorate at the ports of Karachi and Chittagong. Committees to advise the Directorate on Port welfare, Seamen's health, Seamen's education, Merchant Seamen's Welfare Fund, and Merchant Seamen's welfare have been set up. The amenities provided to seamen at

Karachi port include two very well-equipped clubs with a bar, restaurants, swimming pools, tailoring shops, etc. There are also facilities for medical treatment, two libraries, arrangements for outdoor games and transport. Offices have been opened for Pakistani seamen's welfare at London, Liverpool, Glasgow, and similar offices will shortly be opened at New York, Sydney and Calcutta.

From August 15, 1947 to the end of 1948, there were two industrial disputes in the North-West Frontier Province and Baluchistan. The serious post-partition relocation of work in the West Punjab prevented the collection of figures for that province. In Sind, however, there were 12 strikes involving about 10,000 workers and a loss of 22,000 man-days. East Bengal had 69 strikes involving 40,506 workmen and a loss of 130,000 man-days. To facilitate mutual adjustment in matters of dispute between workers and employers Government have under consideration a Bill for the compulsory recognition of Trade Unions.

For the purpose of keeping itself abreast of developments in Labour Welfare activities in the more advanced countries of the world Pakistan is seeking international collaboration and assistance. It is now a member of the International Labour Organisation.

The I. L. O. has recruited an officer for their staff from Pakistan and proposes shortly to establish a Correspondent's Office in this country.

FOREIGN TRADE

THE main exports of Pakistan consist of raw jute, cotton, wool, hides and skins, fodergrains, dry fruit, rock, gypsum, salt, potassium nitrate and livestock. Pakistan's imports consist mainly of manufactured goods, coal, oil, iron, steel and machinery. Most important of the imported goods are cotton textiles, which account for about 50 per cent of total imports. Other important articles are sugar, woollen textiles, leather and footwear, paper, cycles, tyres and tubes, chemicals and pharmaceuticals.

India, the U.K. and the U.S.A. are the principal exporting countries. Pakistan has a favourable balance of trade with the rest of the world, but for the most part this has been due to an abnormal fall in imports because non-Muslim businessmen who controlled this trade left the country after partition, and it took time to fill the gap so created.

During the period August 15, 1947 to March 31, 1948, the main exporting countries were the U.K., the U.S.A., and Iran, and during the period April 1, 1948 to October 31, 1948, the Indian Union shared over 50 per cent of Pakistan's total seaborne imports. In this period the countries of the Commonwealth exported to Pakistan goods worth Rs. 44,67,64 lakhs, while imports from other countries amounted to Rs. 9,45,35 lakhs.

The principal countries of import with the respective value of the goods imported are shown below:

| | VALUE IN LAKHS | |
|------------------------------|---------------------------------|-----------------------------------|
| | Aug. 15, 1947 to March 31, 1948 | April 1, 1948 to October 31, 1948 |
| Indian Union .. | 36.24 | 17.19 |
| United Kingdom .. | 4.72 | 4.31 |
| U.S.A. | 4.00 | 2.23 |
| Italy | 2.1 | 1.63 |
| Iran | 2.22 | 2.30 |
| China | — | 1.72 |
| Ceylon | 17 | 1.01 |
| Straits Settlements .. | 7 | 67.23 |
| TOTALS | 11.39 | 73.61 |
| GRAND TOTAL | 13.88 | 80 |
| TRADE | — | 90 |
| Percentage to Grand Total .. | 80 | 90 |

The exports during the period from August 15, 1947 to March 31, 1948, were mainly sent to

the U.K., the Soviet Union, the U.S.A. and Spain. In the period April 1, 1948 to October 31, 1948, the value of the exports to the countries of the Commonwealth and to other foreign countries were Rs. 18,52,96 lakhs and Rs. 20,07,58 lakhs respectively. While the share of the Commonwealth countries in the import trade was about 83 per cent, their share in export trade was only 72 per cent.

The chief countries to which Pakistan exports goods and the value of the exports are shown in the following table:—

| | VALUE IN LAKHS | |
|------------------------------|---------------------------------|-----------------------------------|
| | Aug. 15, 1947 to March 31, 1948 | April 1, 1948 to October 31, 1948 |
| Indian Union .. | 9.85 | 8.85 |
| United Kingdom .. | 13.16 | 3.93 |
| Soviet Union .. | 4.03 | 5.54 |
| U.S.A. | 1.67 | 3.11 |
| Spain | 1.11 | 2.85 |
| China | 1.80 | 3.05 |
| France | 3.27 | 2.43 |
| Hong Kong .. | 29 | 2.57 |
| Italy | 3.37 | 2.86 |
| Belgium | 4.83 | 1.29 |
| Germany | 13 | 1.10 |
| Ceylon | 25 | 97 |
| Japan | 88 | — |
| TOTALS | 37.89 | 48.40 |
| GRAND TOTAL .. | 42.06 | 55.12 |
| Percentage to Grand Total .. | 90 | 87 |

The balance of trade with countries other than the Indian Union from August 15, 1947 to December 31, 1948 is shown in the following table:—

| Period | Imports | Exports | Balance |
|-------------------------------------|---------|---------|---------|
| Aug. 15, 1947- March 31, 1948 | 13.88 | 48.59 | + 34.71 |
| April 1, 1948- December 31, 1948 | 37.20 | 45.27 | + 8.07 |
| TOTALS | 51.08 | 93.86 | + 42.78 |

Out of imports worth Rs. 51.08 crores during the 16½ months from August 15, 1947 to December 31, 1948, the imports during the six months ended December 31, 1948, were valued at Rs.

31.06 crores. The increase during the latter period is due partly to the comparatively steady and normal economic conditions and the rehabilitation of trade and commerce in Pakistan and partly to Pakistan's liberalised import policy and the availability of consumers goods in the exporting countries.

Pakistan's balance of payments with India is very much in favour of Pakistan. From the 1st of July to the 31st December 1948, the net favourable balance was of the order of Rs. 25 crores.

Pakistan's industrial and economic policies combined with surplus budgets and the high credit of the Government provided a further stimulus to trade. The Government in order to replace depleted stocks, liberalised the policy regarding the imports of consumer goods and as a result of all these measures a great fillip was given to the foreign trade of Pakistan. During the period July 31, 1948 to December 31, 1948, Pakistan imported goods from countries other than India worth Rs. 31 crores.

The progress of Pakistan's trade with countries other than India, month-wise can be seen from the following table:—

| Months | (IN LAKHS OF RUPEES) | | |
|----------------|----------------------|---------|---------|

Imports of foreign goods, it will be observed from this table, have been gradually increasing, particularly after July 1948, as by that time trade and commerce had been considerably rehabilitated.

THE PRESS IN PAKISTAN

THERE are three English dailies in the capital Karachi, and two in Lahore and one in Dacca.

The Dawn, published in Karachi, is owned by Messrs. Pakistan Herald Limited. The paper generally reflects the views of the Government. The proprietors of *The Dawn* propose to bring out an edition from Lahore in the near future. The editor of the paper is Mr. Altaf Hussain.

A case has recently been filed in the Chief Court of Sind questioning the legality of the claim to *The Dawn* by Messrs. Pakistan Herald Limited. According to the petitioner, *The Dawn* belongs to Jinnah Trust, of which the late Quaid-e-Azam himself was the sole Mutawalli (Trustee).

There are Urdu and Gujarati versions of *The Dawn* also published in Karachi.

Recently Messrs. Pakistan Herald Limited

secured controlling shares in the *Sind Observer*, another English Daily of Karachi.

The Civil & Military Gazette is published simultaneously in Lahore and Karachi. *The Civil & Military Gazette* of Lahore bought in January 1949, the oldest established newspaper in Sind, *The Daily Gazette* and converted it into the Karachi edition of itself.

The Government of Pakistan banned the publication of the Lahore edition of this newspaper for a period of three months with effect from May 13, 1949, because of the publication of a report about Kashmir from the paper's New Delhi correspondent suggesting a partition of the State of Jammu and Kashmir.

The Civil & Military Gazette is edited by Mr. F. W. Bustin. The paper has a joint editor, Robert Cochran who is also the Resident Editor of the Karachi edition.

The Pakistan Times, a Left-wing paper, controlled by Mian Iftikhar-ud-Din is published in Lahore and has a satellite in Urdu published in Lahore and Karachi simultaneously — *Imroz*. This newspaper also proposes to bring out an edition from Karachi, edited by Mr. Faiz Ahmad Faiz.

The Pakistan Observer (Dacca) has recently come out in the capital of East Bengal. The paper which is edited by Mr. Sohabullah is handicapped by the lack of teleprinter lines for Reuters joining Dacca with Karachi. The paper is controlled by Mr. Hamidul Haq Chaudhury, the East Bengal Finance Minister.

The Eastern Star is another English newspaper published in Dacca.

The following is a Province-wise list of some of the newspapers published in Pakistan:—

| Name of the Newspaper | Place of Publication | Language | Periodicity | Name of Editor |
|---|----------------------|----------------|-------------|--|
| BALUCHISTAN | | | | |
| <i>Quetta Times</i> | Quetta | English | Weekly | P. D. Golvada |

The general policy of some of the papers may be defined as follows:—

| | | | | | |
|---------------------------|--------------------|-----------------------|--|-------------------------------|-------------|
| <i>Nawai-Wagt</i> | Pro-League | <i>Tasnim</i> | Official Organ, Modoodi's Islami Jamiat, Anti-League | <i>Ghazi Maghribi</i> | Pro-League |
| <i>Zamindar</i> | do. | | | <i>Pakistan</i> | do. |
| <i>Ihsan</i> | do. | <i>Safina</i> | Pro-League | <i>Inquilab</i> | independent |
| <i>Imroz</i> | Critical of League | <i>Aghaz</i> | Pro-Central League | | |

POLITICAL PARTIES IN PAKISTAN

THE Pakistan Muslim League is the only political party in Pakistan worth the name. Even in this Party disintegration has started and it is generally believed that the next general elections in the country are certain to bring to the fore-front new political parties with economic programmes. The efforts of the Pakistan Muslim League to launch an economic programme of its own in the form of agrarian reforms do not appear to be attracting much public interest.

The President of the Pakistan Muslim League, Chaudhuri Khaliquzzaman, who was after partition the Leader of the Opposition and the Muslim League Party in the Indian Union Constituent Assembly played the chief part in organizing the present League. Numerous complaints however appear in the press about the unrepresentative character of the Organisation.

Mr. Huseyn Shaheed Suhrawardy, the last Premier of undivided Bengal, who was recently unseated from the Constituent Assembly of Pakistan on the plea of his not having any property in Pakistan is trying to become the leader of the front against Chaudhuri Khaliquzzaman. The veteran League leader of the North-West Frontier Province, Pir Sahib of Manki Sharif is Mr. Suhrawardy's staunchest supporter in that Province. The Pir Sahib has started an Awami Muslim League in the North-West Frontier. His colleagues including Pir Sahib of Zakori and some of the seven dissenting Muslim League M.L.A.'s have been served with detention orders by the Khan Abdul Qayum Ministry. The main complaint of the Pir Manki Sharif group is that they were not given enrolment forms and that the membership of the League was kept as a close preserve for the supporters of the Qayum Ministry.

In East Bengal too, the League is faced with opposition. Maldistribution of enrolment forms is the main complaint here also. The explanation given by the League Chief is that enough paper was not available in East Bengal at that time and therefore forms could not be sent to as many as needed them. The next annual elections of the Muslim League due early in

1950 are expected to bring about some radical changes in the set-up of the League at least in the provinces.

In short, the Muslim League, claiming to be the power behind the Government is very different from the Muslim League of the days of the Qaid-e-Azam Mohammad Ali Jinnah.

MUSLIM LEAGUE WORKING COMMITTEE
President, Chaudhuri Khaliquzzaman.
Vice-President, Maulana Abdullah el Baqi (East Bengal).

General Secretary, Yusuf Khattak (N.-W.F.P.).
Joint Secretary, Mir Nabi Bakhsh (Baluchistan).
Treasurer, A. M. Qureshi.

Members, Maulana Mohammad Akram Khan; Nurul Amin; Liaquat Ali Khan; Khan Iftikhar Hussain Khan of Maudot; Mian Muntaz Mohammad Khan Daultana; Khan Abdul Qayum Khan; Ghulam Nabi Khan Pathan; Qazi Mohammad Isa Khan; Yusuf Abdoolah Haroon.

The first meeting of the Pakistan Muslim League Council was held in Karachi on February 20, 1948, when the Prime Minister of Pakistan, Mr. Liaquat Ali Khan reviewed the Government's activities during the 18 months of Pakistan's existence.

NON-LEAGUE PARTIES

The Congress Party is practically non-existent in West Pakistan. Except in the Constituent Assembly of Pakistan, the Party has no organisation. It has in fact almost ceased to be a political party. In Eastern Pakistan however, the former branch of the All-India National Congress now functions as the Pakistan Congress Party. All the 12 non-Muslim attending members of the Constituent Assembly are from East Bengal and are members of the Congress Party, which is led by Shrish Chandra Chattopadhyay. Professor Rajkumar Chakravarty is the Secretary of the Party.

There is a wide-spread feeling that the Congress Party has no future in Pakistan. The hopes

of the minorities are tied with the possibility of a national non-communal organisation springing up.

The People's Party which came into existence in March 1948, with Khan Abdul Ghaffar Khan and Mr. G. M. Syed as its leaders is also non-existent. Khan Abdul Ghaffar Khan himself still a sitting member of the Pakistan Constituent Assembly, is undergoing three years' rigorous imprisonment under the Frontier Crimes Regulation and the Public Safety Act.

The Scheduled Castes Federation under the leadership of the only non-Muslim Minister, whether Central or Provincial, Mr. Jogendra Nath Mandal is more or less defunct. It comes into the picture only at certain functions or occasions like the birthday of its leader. It may be mentioned that the Scheduled Castes Federation failed, despite assurances by the late Qaid-e-Azam and the then Premier of East Bengal and the present Governor-General of Pakistan, Khwaja Nazimuddin, to get representation in the East Bengal Cabinet. A grant of Rs. 5 lakhs for the education and uplift of the Scheduled Castes during 1948-49 and another Rs. 5 lakhs in 1949-50, were the only outstanding achievements of the Scheduled Castes in the Dominion. Last year's grant could not be utilised in full.

The Christians and Anglo-Pakistanis have formed themselves into a Pakistan Body and they have been awarded one seat in the Constituent Assembly of Pakistan by the Redistribution of Seats Committee whose report was recently adopted by the Constituent Assembly.

The Communists and Socialists Parties are not in favour. Leading Communists and Socialists are in fact behind the bars under the Public Safety Act.

In East Bengal however the Communists are pretty active, and are taking full advantage of the prevalent high prices of foodstuffs in the Province. It is surmised that, they are preparing the ground for a full scale political offensive on an economic plane.

THE FRONTIERS

THE frontier regions of Pakistan are Persia, Afghanistan, India, Burma and, of course, the wild and mountainous country lying between the Arabian Sea and the confines of Kashmir, which used to be called the North-West Frontier in the pre-Partition days. So far as Pakistan is concerned (and for that matter India too) this is the real frontier, one which should give most trouble. India is also vitally interested in this region since after the trouble in Kashmir the north-west frontier of Western Pakistan is also India's frontier in the far north where the frontier country borders on Kashmir.

The West and north-west frontier of Western Pakistan is, for reasons of security, the most important of the frontier regions.

NORTH-WEST FRONTIER

It would be useful to see the problem in its historical perspective, to begin with. The Frontier problem has had a two-fold character—the local issue and the international issue. For almost a century the international issue was the greater of the two, and the most serious question which the undivided Indian Government, both directly and as the executors of British Imperial policy, had to face. But the tendency of later times before the Partition was for the international aspect to recede and for the local aspect to grow in importance, until it might be said with as much truth as characterises all generalisations, that the local issue dominated, if it did not absorb the situation.

The local problem, in its broadest outline, may be briefly indicated before proceeding to discuss it in detail. From the Arabian Sea on the West to the confines of Kashmir is a wild and troublesome sea of some of the highest mountains in the world. The thin valleys in these immense ranges are populated by hardy, brave, militant mountaineers. But sparse as the population is, it is in excess of the supporting power of the country. Like mountaineers in all parts of the world, these brave and fearless men have sought to supplement their exiguous agriculture by raiding the rich plains down below. We may find a fairly close parallel to the situation in the position of the Highlands of Scotland until after the rebellion of 1745 the English Government of the day sought a permanent remedy by opening for the warlike Highlanders a military career in the famous Highland regiments, and in rendering military operations easier by the construction of Wade's road. The Highland problem has disappeared so long from English politics that its pregnant lessons are little realised, but if the curious student will read again that brilliant novel by Neil Munro, "The New Road," he will appreciate what Wade's work meant for the Highlands of Scotland, and what lessons it teaches those who are called upon to face, in its local aspect, the frontier problem of India and more especially of Pakistan.

So far as the area with which we are dealing was concerned, two policies were tried. In Baluchistan, the genius of Sir Robert Sandeman

devised the method of entering into military occupation of the principal points, and thence controlling the country. At the same time close engagements were entered into with the principal chiefs, through whom the tribesmen were kept in order.

That policy was so successful that whilst the administration was expensive the Baluchistan frontier did not seriously embarrass the Government of India from the time when Sandeman set his mark on the land. Thus so far as this section of the frontier is concerned it may be said that no frontier problem exists, save the need for an economic and constructive policy.

AFGHAN FRONTIER

Far otherwise has it until lately been with the section of the frontier which stretches from Baluchistan to the confines of Kashmir. That was, for three-quarters of a century, the scene of almost ceaseless military operations, which constituted a devastating drain on the Indian exchequer, or years one sought for a definite policy guiding the actions of the Government of India. One explanation of their inconsistencies was found in the existence of two schools of thought. Once the frontier with Afghanistan had been delimited, the soldiers naturally pressed for the armed occupation of the whole country right up to the confines of Afghanistan, or at any rate, for military posts, linked with good communications, which would dominate the country. But those who looked at policy not only from the military standpoint, were fearful of two

considerations. They felt that occupation up to the Afghan frontier would only shift the frontier problem farther north. Instead of the differing tribes, we should, they argued, have to meet the Afghan on our border line. If Afghanistan were a strong, homogeneous State, that would be a matter of little account. But even under the iron rule of Abdurrahman Khan, the Amir's writ ran but lightly in the southern confines of his kingdom. Under his successor, Habibullah Khan, whose policy was generally wise and successful, it ran still less firmly. There was the further consideration that financiers were of the fixed belief that even if the Forward Policy was wise from the military standpoint, it would involve charges over an indefinite period greater than the Indian finances would bear. Moreover, on this section of the frontier, the position was complicated by the expansion of Russia in Central Asia. The earliest passes, and the passes down which for centuries from the time of Alexander the Great invaders have swept from Persia and Central Asia to loot the fat plains of Hindustan, traverse this region. Therefore it was deemed essential to control, if not to occupy them, in the interests of the imperial situation. In this zone therefore policy ebbed and flowed between the Forward School, which would have occupied, or dominated, the whole Frontier up to the Durand Line, that is to say up to the Afghan frontier, and the Close Border School, which would have remained out of the difficult mountainous zone and met the tribesmen on the plains if they sallied forth.

THE TWO POLICIES

The result of this conflict of opinion was a series of wavering compromises, which like all compromises were profoundly unsatisfactory. The Government pushed forward posts here and there, which irritated the tribesmen, and made them fearful for their prized independence, without controlling them. These advanced posts were in many cases inadequately held and rarely were they linked with their supporting posts by adequate means of communication. The Government preserved between their administrative frontier and the Durand Line which demarcated the Indian frontier with Afghanistan an irregular belt of land called the Tribal Territory, in which neither the British nor the Afghan Government exercised jurisdiction. This was left entirely under the control of the tribes who peopled it.

Now it was often asked why the Government did not follow the precedent of Baluchistan and "Sandemanise" the Independent Territory. The answer was there were essential differences between this zone and Baluchistan. Sir Robert Sandeman found a strong tribal system existing in Baluchistan, and he was able to enter into direct engagements with the tribal chiefs. There is no such tribal organisation in the Independent Territory. The tribal chiefs, or maliks, exercise a very precarious authority, and the instrument for the collective expression of the tribal will is not the chief, but the jirgah, or tribal council, of the most democratic character, where the voice of the young men of the tribe often has the same influence, in time of excitement perhaps more influence, as the voice of the wiser greybeard.

The bitter fruit of this policy of compromise was reaped in 1897, when following a minor outbreak in the Tochi Valley the general uneasiness flamed into a rising which involved the whole of the North-West Frontier, from the Gomal to the borders of Kashmir. A force over thirty thousand strong had to be mobilised to deal with it. Even this large force, owing to the immense difficulties of transportation, was unable effectively to deal with the situation, though peace was made.

The emergency thus created synchronised with the advent of Lord Curzon as Viceroy. He dealt with it in masterful fashion. In the first place, he separated the frontier zone from the Government of the Punjab, which had hitherto been responsible for its administration, and had organised for the purpose a special force of Frontier soldiers, known as the Punjab

Irregular Frontier Force. The area so separated was constituted into a separate administrative zone under the direct authority of the Government of India, exercised through a Chief Commissioner. Then Lord Curzon withdrew the advanced military posts and concentrated the regular troops in bases better linked with the main military centres of India by roads and railways. The advanced posts, and especially important Passes like the Tochi, the Kurram and the Khyber, were entrusted to the defence of local militia, recruited from the tribesmen themselves, and officered by British officers drawn from the ranks of the Indian Army.

Later it was supplemented by a fine development policy. The construction of the Upper Swat Canal, led to such an increase in cultivation that the tribesmen were given a means of livelihood and were invested with the magic charm of valuable property. The irrigated part of the Frontier has since been one of the most peaceful in the whole border line.

THE AFGHAN WAR

Judged by every reasonable standard the Curzon policy was successful. It endured throughout the Great War, though the Waziris built up a heavy bill of offences, which awaited settlement when Government were free from the immense preoccupations of the war. It broke down under the strain of the invasion of India by the Afghans in the hot weather of 1919. On February 20th the Amir Habibullah Khan was assassinated in his sleep near Jelalabad. Although he does not figure so prominently in frontier history as his father Abdurrahman Khan, he nevertheless has high claims on the favourable verdict of history. In truth, the position of the Amir when Turkey entered the war, and called Moslems everywhere to arms on the side of Germany, was extraordinarily difficult. He received Turkish, German and Austrian missions in Kabul, from which British representatives were still excluded. But he kept Afghanistan out of the war, and with the complete defeat of the Central Powers and their satellites, his policy was justified up to the hilt. Indeed his success was the cause of his assassination. When he was done to death, his brother, Nasrullah Khan, was proclaimed Amir by the assassins. But the conscience of Afghanistan revolted against the idea of Nasrullah, the arch-fanatic of the ruling House of Kabul, ascending the throne over the blood-stained corpse of his brother. A military movement in Kabul itself brushed him aside and installed the son of Habibullah, Amanullah Khan, on the throne.

But Amanullah Khan soon found it was a thorny bed on which he lay, and encouraged by the disorders in the Indian sub-continent, set his troops in motion on April 25, 1919, and preaching a *jihad* promised his soldiers the traditional loot of Hindustan. The Indian Army was at once set in motion, and as has always been the case the regular Afghan Army was easily beaten. Dacca, beyond the Khyber, was seized, Jelalabad and Kabul were bombed from the air, and there was nothing to prevent the British occupation of Kabul, save the knowledge gleaned from the bitter heritage of the wars of 1838 and 1878, that it is one thing to overthrow a government in Afghanistan, but it is quite another to set up a stable government in its stead. The Government of India wisely held their hand, and the Afghans having sued for peace a treaty was signed on the 8th August, 1919.

But an untoward effect of this wanton war was to set the Frontier from the Gomal to the Khyber ablaze. With one or two exceptions the Tribal Militia, left without the support of the regular troops who in the emergency ought to have been hastened to their succour, could not stand the strain of an appeal from their fellow tribesmen, and either melted away or joined the rising.

RUSSIA AND THE FRONTIER

The Curzon policy was up to this inevitable collapse greatly assisted by extraneous events. The greatest external force in moulding Indian

frontier policy was the long struggle with Russia. For nearly three-quarters of a century a veiled warfare for predominance in Asia was waged between Great Britain and Russia. This external force involved the Government of India in the humiliations of the Afghan War of 1838, in the tragic destruction of the retiring Indian force between Kabul and Jelalabad, slightly relieved by the heroic defence of Jelalabad and the firmness of General Pollock in refusing to withdraw the punitive army until he had set his mark on Kabul by the razing of the famous Bala Hissar fortress. But in the early eighties the two States were on the verge of war over a squabble for the possession of Penjeh, and then men began to think a little more clearly. There began a series of boundary delimitations and agreements which clarified the situation, without however finally settling it.

The old controversy broke out in another form when intrigues with a Buriat monk, Dorjileff, during Lord Curzon's viceroyalty, gave rise to the grave suspicion that the scene had only shifted to Tibet. An expedition to Lhasa rent the veil which had so long concealed the mysterious city and dispersed the miasma of this intrigue. But it was not until the conclusion of the Anglo-Russian agreement of 1907 that the two countries arrived at a stage long sought by those who looked beyond their noses. The Agreement embraced the whole frontier zone and placed Afghanistan beyond the sphere of Russian influence. There were many unsatisfactory features in the Agreement especially in regard to Persia, for which the British had to pay a considerable price in the attitude of Persians in the war. But again taking long views, the Agreement fully justified itself in a broad definition of the interest of the two countries, which put an end to the period of excursions and alarms up to the outbreak of the War.

Russia then ceased to be a material factor in the Indian Frontier Problem. With the establishment of the Soviet Government in Moscow uneasiness returned for a few years, and allied circumstances which influenced the policy of the Tsarist regime exert precisely the same pressure upon its successor.

GERMAN INFLUENCE

As nature abhors a vacuum, so in the case of States bordered by higher civilisations, no sooner does one strong influence recede than some other takes its place. Long before the signing of the Anglo-Russian Agreement the shadow of the German menace had begun to appear on the horizon. The seeds of the German effort were sown when the Kaiser, extending the hand of Christian fellowship to the Sultan of Turkey, Abdul-Hamed, at a time when that sovereignty was ostracised by Europe for his direct complicity in the massacre of Armenians, made German influence supreme at Constantinople. Later it fructified more effectively in the Baghdad Railway concession, under which German interests secured the right of extending the Anatolian lines from the port of Haider Pasha, opposite Constantinople, to a port in the Persian Gulf. Now successive British statesmen of both parties had declared that the acquisition of a territorial foothold in the Persian Gulf by any power—Russia and the port of Bandar Abbas being then in view—would be regarded as an unfriendly act. There followed a replica of the period of alarms and excursions which had disfigured British relations with Russia. Undaunted, even when their endeavour to secure British co-operation in the enterprise failed, and when the Revolution in Turkey which set the Committee of Union and Progress in power entailed a temporary interruption of their influence at Constantinople, the Germans pressed forward with their enterprise.

Throughout the progress of these schemes, which did not stop short of Baghdad, but were directed through a port in the Persian Gulf, at India, the Germans were anxious to secure the co-operation of Great Britain, if they could

do so on their own terms, that is to say without affecting the enterprise as a dominant German adventure. Shortly before the commencement of the War of 1914-18 the protracted negotiations with London which had this end in view ended in a definite agreement between the two Powers. Under this agreement the Guit section of the line was to have been British, and the other portion German. But this agreement which had not been signed became waste paper with the outbreak of the war, and the German plans vanished into thin air with the complete defeat of Turkey and Germany. Nevertheless the railway did not stand still during the war. Germany made immense efforts to complete the difficult tunnel sections and the work was substantially finished when the Armistice was signed.

FRANCE AND THE FRONTIER

It is difficult to find any sound policy behind the efforts of France to obtain a coaling station at Muscat in the Persian Gulf, and her long opposition to the steps necessary to extirpate the slave trade, and hold in check the immense traffic in arms which was equipping all the tribesmen on our North-West Frontier with rifles of precision and a large supply of ammunition. These embarrassments were slowly removed one by one after the conclusion of the Anglo-French Entente. Far otherwise was it in the East. The consolidation of French authority in French Indo-China was the prelude to designs for the expansion of this authority at the expense of Siam and to find compensation there for the vested British protectorate of Egypt. There had earlier been mutterings in Burma. The British were established in Lower Burma in the thirties and in the eighties the foolish and tyrannical King Theebaw, in Upper Burma, became an impossible neighbour, and ambitious Frenchmen were not averse to fanning his opposition to the British. However, if any hopes were entertained of extending the Asiatic possessions of France in this direction, they were dissipated by the Second Burmese War and the firm establishment of British rule.

Far otherwise was it on the confines of Siam. It was the fixed purpose of British policy to preserve Siam as a buffer state between Burma, then a regular Province of the Indian Empire and French Indo-China. This policy was definitely challenged by French encroachments on Siam. Matters approached a crisis in 1894, and Britain and France were within measurable distance of a situation which might have ended in open war between them. But as in the case of Persia and later when Major Marchand marched across Africa to Fashoda, the imminence of hostilities made statesmen on both sides ask themselves what they might be going to fight about. They found there was nothing of vital interest involved and an agreement was negotiated between the two Powers, which secured the independence and integrity of Siam.

THE NEW FRONTIER PROBLEM

The whole purpose of this brief sketch has been to show that for three generations—most assuredly since the events leading to the Afghan War of 1838—the Indian and Pakistan frontier problem has never been a local problem. It has been dominated by external influences—in the main the long struggle between Great Britain and Russia, for a brief period the German ambition to build up a dominant position in the East through the revival of the land route, and to a much lesser extent by the ambitions of France and Turkey.

The circumstances affecting the Frontier from centres beyond it have greatly changed. Old dangers have disappeared. Consequently, a great deal of new attention is necessarily being directed to local aspects of the general problem. The tribesman in the north-west borderland was always an opponent to be respected. Brave, hardy, fanatical, he has always been a first-class fighting man. Now these tribesmen are everywhere armed with magazine rifles, either imported through the Persian Gulf when gun-running was a thriving occupa-

tion, stolen from British magazines, or secured from Russian and Afghan sources. They have an abundant supply of ammunition. Considerable numbers of the fighting men have been trained in the ranks of the Indian Army, either as Regulars in the Pathan regiments, or else in the tribal militias.

It may be said that the crux of the situation was in Waziristan. This sector of the Frontier has always been the most difficult of the whole, because of the intractable character of the people, and of their inveterate raiding activities. Besides, possessing a bolt hole into Afghanistan they had in the past evaded effective punishment. In view of the complete disappearance of the external menace, there were many who urged the desirability of complete withdrawal, even to the line of the Indus. This extreme school gained little support. The position in Quetta on the one side and Peshawar on the other is fully consolidated, and no good case could be made out for withdrawing from it. On the other hand, here was a strong case made out for leaving the tribesmen severely alone from the Gomal to the Kurram, and dealing with them if they emerged from their fastnesses. The military standpoint was that the Waziristan tribes are intractable; that it was unfair to impose on troops the frequent necessity of punitive operations in most arduous conditions; and that the only solution of the question was the occupation of dominant points in Waziristan, as far north as Ladina, and linking these posts with the military bases, and particularly with the terminal of the Frontier railways, by good motor roads.

This controversy lasted long. It resulted in a compromise which specially arose from the changed conditions in which the British found themselves in 1922, when the troops were in occupation of Waziristan. The ensuing policy has been aptly described as the "half-forward" policy. It is in truth a repetition of the Sandeman policy, adapted to local conditions. There has been no withdrawal in the ordinary sense of the term, but the limit of the North Waziristan occupation was temporarily fixed at Isaznak, not at Ladina. A network of consequential roads was pushed forward. In South Waziristan, Wana had been re-occupied, partly in response to a pressing invitation from the Wana Wazirs, because they wanted to share the benefits which they saw British occupation to be bringing to their cousins northward of them.

In February, 1933, control over tribal territory was pushed forward beyond Isaznak towards the Afghan Border because of a rebellion on the Afghan side and of the need to assist the King of Kabul by preventing excursions by bodies of Wazirs into Indian territory.

The work of control and of civilization rapidly progressed in the whole territory. Of this particulars are given elsewhere in this chapter. One of its recent fruits was a request by the Afridis for roads in their country of Tirah. A beginning with construction was made, but discussions within the tribe in regard to it caused the work to be suspended. The desirability of better controlling the Afridis was demonstrated in 1930 when the young Afridis invaded the Peshawar Plain and the need for the adoption of a more active policy in Waziristan was shown by a rising of the Tori Khel Wazirs in 1936-37. A serious military campaign in Waziristan in 1936-37, necessitated by the disturbing religious agitation, showed that conditions there were far from settled. The extent of the trouble there resulted in serious official review of the whole problem once again.

The main railhead, which for many years terminated at Jamrud, at the easterly entrance to the Khyber Pass, was in the autumn of 1925 extended to Landi Khana, at the opposite end of the Pass and within a mile of the frontier between India and Afghanistan.

THE WITHDRAWAL

With the establishment of the two Dominions of India and Pakistan what is called the North-West Frontier has passed into the hands of the

Dominion of Pakistan. At the beginning some anxiety was felt about the attitude of the tribes towards the new State; but a number of tribal jirgas hastened to offer their allegiance to the new Government. For example, the Mohmands, the tribes of the Khyber Agency, the Shikhanis and the Bhattanis are reported to have expressed their loyalty to Pakistan and given assurance of help to the State in time of need.

Three months after the new State came into being it carried through what it called a new policy in regard to the frontier; a policy based on trust and friendship unlike the old policy which it was claimed, was based on fear and hostility. In pursuance of the new policy troops were withdrawn from south and north Waziristan. The withdrawal operations started on December 6 and were completed on December 27. The famous frontier outposts of Wana and Razmak were given up and the Pakistan troops fell back on military stations in the settled districts of Jannu, Dera Ismail Khan and Kohat. Pakistan troops have also been withdrawn from the Khyber Pass where sufficient strong forces used to be kept, particularly at the outposts of Torkhan and Kamud Fort.

Necessary administrative arrangements would obviously be made till such time as the Pakistan Constituent Assembly in consultation with tribal leaders decides the future of their Government. A committee has already been appointed for the purpose during the preliminary session.

One of the objects of the withdrawal is to save the Pakistan exchequer several crores.

The effects of this 'close border' policy are likely to be far-reaching. For instance, the frontier between Pakistan and Afghanistan the so-called Durand Line has never been clearly defined or demarcated. In the old days the tribes have profited by the existence of these military outposts: a number of economic advantages have accrued to them, a very important point in a barren and rugged country. The question may be asked: Does the Pakistan Government intend to substitute other economic aids to keep the tribesmen contented? If not is there not a danger of a recurrence of tribal raids across the border in search of food and loot? What effect will all this have on north-western Pakistan or Kashmir in which India is interested? Again, what is the position to be in respect of that natural but strongly defensible gateway to the Indian sub-continent, the Khyber Pass which itself lies in the Afridi country?

AFGHAN INTEREST

It is presumed that the withdrawal of troops would help maintain happy and peaceful relations between Pakistan and Afghanistan. A point which must be mentioned here is the strong interest which the Government of Afghanistan evinced in the future of the N.W.F.P. during the referendum. A note presented by the Government of Afghanistan in London in the middle of June appeared to revive its claims on the N.W.F.P., the land between the Indus and the Durand Line. But closer scrutiny showed that what the note actually demanded was that the Pathans should be given the choice to be completely independent of the rest of the sub-continent, a demand which appeared to be in harmony with that of the Red Shirts who were agitating for an independent Pathanistan.

The Afghan press and radio for sometime emphasized the close kinship between the Pathans and the Afghans and suggested that that was the opportune moment for the Pathans to come back to their 'mother country'. A further suggestion was that Afghanistan should be allowed to send its own mission to conduct the referendum.

The Afghan note was rejected both by Britain and India. The British reply said that the question of the future of N.W.F.P. would be decided by the Pathans themselves while the Indian reply took the line that the boundary between Afghanistan and India was settled once and for all by the Durand Line.

The status of the border area is once again causing trouble between Pakistan and Afghanistan.

The withdrawal of British rule reopened the whole question of the future of the native States in Baluchistan. Persia and Afghanistan were greatly interested and the Khan of Kalat sat on the fence for a long time. Eventually the question was decided by the accession of Kalat, Khاران and Las Bela to the Dominion of Pakistan.

Beyond Afghanistan and Persia was Russia who was credited with the desire of uniting the inhabitants of north Afghanistan with allied groups in the U.S.S.R. and offering Afghanistan compensation in N.W.F.P. There also appeared to be an impression that Russian eyes were directed on a warm water port in the Indian Ocean as an outlet for Central Asian produce and that this warm water port might be Karachi.

Altogether, the whole frontier question may be described as being once again alive.

WAZIRISTAN

After a general discussion of the north-west frontier problem we may next pass on to a detailed discussion of the past history and present conditions of Waziristan which is the most unruly and turbulent part of the whole region.

Geographically, Waziristan is a rough parallelogram averaging 60 miles from East to West and 160 from North to South. The western half consists of the Sulaiman Range gradually rising up to the ridge from five to ten thousand feet high, which forms the water-shed between the Indus and the Helmand Rivers and corresponds with the Durand Line separating Pakistan from Afghanistan. This is the western boundary. On the east is the Indus. North is the water-shed of the Kurram River running East and West about 30 miles north of Bannu separating Waziristan from the Kohat District. South is a zigzag political boundary from the Durand Line running between Wana and Fort Sandeman in Baluchistan with a turn southwards to the Indus.

The western half is a rugged and inhospitable medley of ridges and ravines straggled and confused in hopeless disarray. The more inhabited portions lie well up the slope at heights of four to six thousand feet. Here are the outposts of Wana and Razmak some 15 and 20 miles respectively from the Durand Line. In the centre of the grazing district, the latter within five miles of important villages of Kangram and Makin.

The submontane tracts from the hills to the Indus vary from the highly cultivated and irrigated land round Bannu to the sand desert in the Marwat above Peshu.

Where irrigation or river water is obtainable cultivation is attempted under conditions which can hardly be encouraging. Other tracts like that between Peshu and Tank, usually pastoral, can only hope for an occasional crop after a lucky rainfall.

Inhabitants.—The inhabitants, unable to support existence on their meagre soil, make up the margin by armed robbery of their richer and more peaceful neighbours. The name originates according to tradition from one Wazir, two of whose grandsons were the actual founders of the race. Of the four main tribes Darweshkhel, Mahsuds, Dawars and Batanni, only the first two are true Wazirs. Their villages are separate though dotted about more or less indiscriminately, and inter-marriage is the exception—in fact all traditionally are in open strife, a circumstance which, until some bright political comet like the Afghan War of 1919 joined them together, materially aided British dealings with them.

Unlike other parts of the frontier however these wild people acknowledge little allegiance to maliks or headmen. No one except perhaps the Mulla Powindah till his death in 1913 could speak of any portion of them as his following.

The policy of the British was at first one of non-interference with the tribes. Gradually it was found that more and more supervision became necessary to control raiding and this was attempted by expeditions to portions of the country with Regulars, followed by building posts and brick towers to be held by Militia. These posts were at first placed at the points where raiders usually debouched.

The Political Officers, at first supported by Regulars, built up from 1904 onwards a force of some 3,000 Militia with British Officers at their disposal, who were backed up by the garrisons at Bannu and Dera Ismail Khan. In addition certain allowances were made to the tribes for good behaviour, prevention of raids and surrender of offenders when required; also for tribal escorts as necessary. Gradually, as occasion required, posts were constructed and occupied. Wana was occupied in 1895 at the request of the Wana Wazirs. Similarly the Tochi in 1876. In the comprehensive expedition of 1895-96 when this policy was put into effect, the British arms were shown in every remote valley in the vain hope of taming the Mahsuds. It was hoped the various posts would prove a pacifying influence and a rallying ground for government supporters. From 1904 to 1919 they were held by Militia. Roads and communications were improved and tribal allowances augmented by sales of produce to the troops on a liberal scale.

A COMPROMISE

A full statement of the policy finally adopted by Government in view of the situation left upon their hands after the Mahsud rebellion was made by the Foreign Secretary, Sir Denys Bray, in the course of a Budget discussion in the Legislative Assembly on 5th March 1923. He outlined neither a Forward policy nor a Close Border policy. Both these terms had, in fact, ceased to be appropriate. Circumstances had so changed that neither the one plan nor the other remained within the bounds of reasonable argument.

Sir Denys referred to the triumph of the Sandeman policy in Baluchistan. He pointed out that some people long ago believed that the same policy would prove effective in Waziristan. "But what was a practical proposition 20 or 30 years ago is not necessarily so now. The task is infinitely more difficult to-day, chiefly because the tribesmen are infinitely better armed; their arms having increased at least tenfold during the last 20 years."

Dealing with the Close Border prescription Sir Denys Bray showed that if one erected a Chinese wall of barbed-wire fence along the plain some distance below the hills, "all the time the problem in front of us would be going from bad to worse, with the inevitable increase of arm in the trans-border and with that inevitable increase in the economic stringency in this mountainous tract, which would make the tribesmen more and more desperate, more and more thrown back on barbarism."

The settled policy of Government in Waziristan, Sir Denys stated, was the control of that country through a road system, of which about 140 miles would lie in Waziristan itself and one hundred miles along the border of Derajat, and the maintenance of some 4,600 Khassadars and of some 5,000 irregulars, while at Razmak, 6,500 feet high and overlooking northern Waziristan, there would be an advanced base occupied by a strong garrison of regular troops. This was a forward policy in a very real sense, for it was a policy of constructive progress and was a big step forward on the long and laborious road towards the pacification, through civilization, of the most backward and inaccessible, and therefore the most truculent and aggressive tribes on the border.

The policy thus initiated for a period proceeded with results according to the highest reasonable expectations and exceeding the most sanguine hopes of most people concerned in its formulation.

PACIFICATION

The roads were policed by the Khassadars, who in the main, until the Tori Khel rebellion of 1936-37 upset some of them, proved faithful to their trust. The open hostility of the Wazir tribesmen to the presence of troops and other agents of Government in their midst, which at the outset they showed by shooting up individuals and small bodies of troops at every opportunity, faded away, and the people showed an understanding of the rule of law, and under the control exercised, a readiness to conform to it. In various small but significant ways, methods of civilization caught the imagination of the people and won their approval. Thus, the safety of the roads was encouraged, and became buttressed by a considerable development of motor-bus traffic. The roads, as the King's Highway, are officially held to be sacrosanct, that is no shooting up or other pursuit of personal or tribal ends is permitted upon them. This permits villagers to proceed to and from the plains and towns in safety. Under the influence of their women, the tribesmen applied that the ban against shooting upon the highway would be extended to all the country for three miles on either side of the highway.

Tentative efforts to introduce primary education proved possible and achieved as much success as could be expected. The hospitals and dispensaries maintained for irregular troops, called Scouts, employed about the country, attend to the wants of the tribespeople who come to them. So much has this arrangement been appreciated that the Mahsuds formally applied for the establishment of a hospital of their own. With grim humour, they offered to provide such an institution with the necessary surgical instruments, saying that they had saved this from the time when the British formerly left the country. In other words, they offered what they had captured or looted during the 1919 emute.

Wana was occupied, following an encouraging petition from the local Wazirs, in 1929. A motor road had already been run out from Jandola through Chagnalati and the Shalut Tangi to Sarwakkal. A brigade of troops, hitherto stationed at Manzal, whereabout the Takki Zam, after flowing down its deep valley from central Waziristan, debouches on to the Derajat, was accordingly ordered up to Wana in the autumn of 1929. It proceeded throughout the journey thither without opposition and was warmly welcomed by the tribes people at Wana, where it established itself in a favourably sited camp not far from the fort which was the earlier centre of British occupation.

The area cultivated by the villagers of Wana plain doubled by the end of 1931 and the people declared their readiness to surrender their firearms if their neighbours also gave up theirs or were deprived of them. A road was built connecting Fort Sandeman via Gulakach, on the Gomal River, with Tanal, on the Sarwakkal-Wana road. A motor road was also constructed from Razmak through Kangram, in the heart of the Mahsud country, to Wana. It was completed in 1933 and the only district connected with its construction arose from the rivalry of the tribesmen whose villages lie along the route and who sometimes fought one another to secure road-making contracts.

Congress Movement.—A startling new development upon the North-West Frontier during 1930 was the spread thereto of the agitation which was then in full swing in the interior of India. In the N.W.F.P. the agitation was carried on by Congress organised in what are known as Khilafat Committees. It started as an attack on the Sarda Act which makes illegal and provides penalties for the marriage of boys and girls below stated minimum ages. Gradually the tribal areas were affected. The first point of violent combustion was Peshawar city. Within a short time, Afridi bands descended the ravine, and nullahs to join in the fray. The Mohmand tribes became greatly excited and sent down

hands to sit near the border and watch for an opportunity to join in. The Upper Tochi Wazirs simultaneously took to arms and shortly afterwards the Mahsud Wazirs about Ladha, did the same. At this stage, the Air arm of the Government came into play. Aeroplanes patrolled the whole country and were frequently employed by the political authorities to take preventive and punitive action by bombing. The road system meanwhile, enabled troops to be moved at will to positions of advantage for dealing with whatever serious tribal aggression appeared likely.

In the result the Mohmands, after being bombed several times, made no descent in force. The Afridis twice endeavoured to raid Peshawar in force but by combined air and land action were both times driven back to their hills. The Orakzais of southern Tirah threatened to descend by the Ublan Pass upon Kohat and their western clans attacked a post in the Upper Kurram and endeavoured to attack Parachinar. Even two or three clans of Afghan tribesmen across the border were drawn into the fray. Combined air and ground action threw them back. The Tochi Wazirs heavily attacked Datta Khel, but were speedily repulsed. The Mahsuds were similarly repulsed and punished when they assaulted Sorarogha, in the valley of the Takli Zann.

The entire uprising was suppressed and the establishment of new fortified posts on the Peshawar plain, immediately opposite the main valleys leading out of Tirah, and the construction of roads for their service, indicated the application of the new frontier policy in that region. The Afridis long refused to assent to these, but being thereby deprived of access to their normal winter grazing grounds on the Khajuri and Aka Khel plain, and prevented from visiting Peshawar, their marketing centre, they came in and accepted peace under the new conditions before the opening of the winter of 1931-32. The Afridis later asked for roads into Tirah but were not yet sufficiently agreed among themselves or construction successfully to proceed.

MOHMAND OUTBREAK

Disturbances in the Mohmand country during the summer of 1933 both illustrated the operation of the new frontier policy and the need to keep it a live policy if it was to be of any use at all. The Mohmands may for the purposes of present description be divided into two categories, namely, the Upper Mohmands, who live in the highlands of the Mohmand country, and the Lower Mohmands, whose country stretches from the lower altitudes of the same hills down to the Peshawar Plain. Through the country of the Upper Mohmands passes the Durand line into the Afghan Government, never agreed to its definition in part of this region and consequently its place had long been taken over a considerable portion of the length of the frontier by what was described as the Presumptive Frontier. The exact position of this latter had never been settled between the two governments and it was consequently sometimes difficult to say whether people from particular villages belonged to one side or to the other of it.

In 1932 during the Red Shirt campaign in the Peshawar plain, the Upper Mohmands decided to join in and raids in the administered territory immediately northward of Peshawar occurred.

The Lower Mohmands were described as the Assured Tribes. The meaning of the description was that the British authorities assured them protection against the attacks of the Upper Mohmands and they, on the other hand, were bound by promises of good behaviour. The Assured Tribes in 1932 interfered with the programme of the Upper Mohmands in raiding the plain, and the Upper Mohmands in 1933, when spring and early summer once more facilitated their methods of campaigning, commenced retaliatory raids upon the Hazimzai and other Assured clans. The attacked clans appealed to the political authorities for help which the latter were obliged to give.

About the same time as this movement was germinating, there appeared in Bajaur, a country immediately to the north of that in which the events just described developed, a Pretender to the Afghan throne. He was accompanied by two companions and started a campaign in Bajaur for a revolution of such other trouble as might be possible in Afghanistan. This compelled the British authorities to take measures in fulfilment of their obligations of good neighbourliness to Afghanistan.

Peace.—Road construction from the Peshawar Shabkadir road northwards through Ghulana into the Hazimzai country and towards the passes which lead from that country into the upper extremities of the Bajaur Valley was undertaken and two brigades of troops, with other details, were sent forward up it to assist in dealing with the Upper Mohmands. At the same time, aeroplanes bombarded the village of Kotkal in Upper Bajaur, which had given shelter to the Pretender, further aerial demonstrations were made and the Bajauris were given an ultimatum demanding the surrender of the Pretender by a given date.

The Upper Mohmands continuing aggressive and the Bajauris obdurate, there was good prospect of a campaign over the same country as that covered by the campaign of 1927. It seemed likely that the Ghulana Road would be continued into the upper extremity of Bajaur and that another road for troops would also have to be constructed from Malakand up the Bajaur valley itself so that by the meeting of the two roads in Upper Bajaur, there would become established a circular road through this part of the tribal territory, resembling that running through North Waziristan.

In the end, the Upper Mohmands, partly doubtless because of punishment which they received in certain encounters with British troops and partly probably because of influence brought to bear upon them from Kabul, retired to their hills and after negotiations entered into bonds to keep the peace; and the Bajauris, while maintaining on grounds of tribal custom their refusal to surrender the Pretender, nevertheless expelled that person from their territory, probably into Afghanistan. Thus, the trouble ceased. The final result of it all was the construction of the road through Ghulana and the rapid development of bus services and other activities of civilization which speedily took place along with it.

The Upper Mohmands made another descent in the summer of 1935. The Lower Mohmands quarrelled among themselves over the distribution of road maintenance contracts and the Upper Mohmands decided to fish in the troubled waters. Successful military operations ended in the Upper Mohmands suing for peace—and in the Ghulana road being carried forward over the Nabhakki Pass and down beyond it on to the plain which extends to the natural road junction where the Upper Bajaur Valley meets the Upper Mohmand country.

TORI KHEL REBELLION

The Wazirs and Mahsuds in 1930 showed signs of rebelling against Government in parallel with the Afridis. All went peacefully until the autumn of 1936 in North Waziristan when a Muslim lad was accused of kidnapping a Hindu girl of Bannu. Apparently she eloped with him. She was restored to her parents by order of the Civil Court, on the ground that she was a minor. There was a good deal of communal excitement about the matter and the fact of Ipi was alleged to have started an agitation about it in the Tribal country. There was also in 1936, a dispute between Muslims and Sikhs in Lahore over the possession of an old building said to have been a mosque. This was settled in the Lahore High Court in favour of the Sikhs and the Punjab Muslims accepted the decision. The fact of Ipi is said to have lumped together the Bannu Girl Case and the Lahore (Shahidanji) Mosque Case and to have raised among the Waziristan Tribes the slogan "Islam in Danger". Whether the accusation against the Iqbal was true or not a sub-section of the Tori Khel section

of the Wazirs of Northern Waziristan rose. Their elders begged Government to order a flag march of troops through their country so as to increase the credit of the loyalist element. This Government did. The troops were heavily fired upon and had to fight their own way out. Efforts to round off the engagement before it developed into a major rebellion failed and there followed a war in which the Tori Khel were the only tribal section avowedly at war with Government but all the other tribesmen of the country were hardly more than nominally friendly, some joined in gangs to fight the authorities and others connived at such acts. Not until the fall of winter towards the end of 1937 were the Tori Khel and the bands of irreconcilables under daring leaders beaten by extensive military operations into asking for peace. The summer campaign in 1937 involved the employment of 50,000 troops. Before they were withdrawn in the following winter 106 miles of new roads opening up some of the hitherto inaccessible country in and about the upper reaches of the Shaktu river were made. But north Waziristan remained, in a disturbed condition throughout 1938 and on into 1939. It was therefore, found necessary to keep an extra brigade in the territory and spasmodic operations against recalcitrant gangs proceeded by land and air but normal conditions were not restored.

Unrest during War.—In the summer of 1938 a temporary complication was provided by the appearance amongst the Mahsuds of a Syrian called the Shami Pir who was only just prevented from leading a tribal incursion to support a rebellion against the Government of Kabul. The persistence and expense of the trouble in Waziristan, constituting as it did a heart-breaking set-back to the "policy" which had seemed for fifteen years to be achieving material results, provoked renewed discussion of Frontier policy especially in regard to military commitments which were examined by a Defence Committee under the chairmanship of Lord Chatfield who visited India on behalf of the British Government towards the end of 1938.

Although hostile sections still persisted with mischief there was thought by April 1939 to be sufficient justification for the hope that the period of major military operations was over and Waziristan was in consequence returned to the charge of the Governor of the N.W.F.P. in his capacity as A.G.G. for the tribal areas. Sporadic disturbances continued into the period of the second world war and the Faqir remained an elusive figure.

During 1939, Waziristan was in a state of continual unrest. The number of offences said to have been committed by the Ahmedzai tribesmen by the end of the year amounted to over fifty cases of major outrage. They included blasting of bridges and destruction of communications, holding up and looting lorries, sniping, kidnapping and several cases of murder. The situation became difficult necessitating military operations. Two columns of troops were sent to the Ahmedzai salient and it took three months to subdue the hostile elements.

A detailed investigation into the economic conditions in the tribal areas, as a preliminary step to the adoption of measures aimed at racial amalgamation of the tribesmen, was thereupon believed to be opportune and would probably have been attempted but for the preoccupations of the war.

IRAN

From causes which only need to be very briefly set out, the Iran question as affecting Pakistan frontier policy has receded until it is of no account. Reference is made in the introduction to this section to the fact that the conclusion of the Anglo-Russian Agreement left the British a bitter legacy in Persia. That Agreement divided Iran into two zones of influence, and the Iranians bitterly resented this apparent division of their kingdom between the two Powers, though no such end was in view. German agents, working cleverly on this feeling, established an influence which was not subdued, and when World War I broke out they were able to raise the tribes in opposition to Great

Britain, in the south, and after the fall of Kutal-Amara, when a Turkish Division penetrated Western Iran, they exercised a strong influence in Teheran.

With the defeat of Turkey and the Central Powers this influence disappeared, but at that time there was no authority in Iran besides that of the British Government, which had strong forces in the North-West and controlled the southern provinces through a force organised under British officers and called The South Persian Rifles.

It was one of the first tasks of the British Government to regularise this position, and for this purpose an agreement was reached with the then Persian Government, the main features of which were:—

- To respect Persian integrity;
- To supply experts for Persian administration;
- To supply officers and equipment for a Persian force for the maintenance of order;
- To provide a loan for these purposes;
- To co-operate with the Persian Government in railway construction and other forms of transport.

Both Governments agreed to the appointment of a joint committee to examine and revise the Customs tariff.

The second agreement defined the terms and conditions on which the loan was to be made to Persia. The loan was for £2,000,000 at 7 per cent. redeemable in 20 years. It was secured on the revenues and Customs receipts assigned for the repayment of the 1911 loan and should these be insufficient the Persian Government was to make good the necessary sums from other sources.

When however the British troops in the north-west retired before the Bolsheviks, the Iranians had no use for the Agreement and it soon became a dead instrument. It was finally rejected and the advisers who were to have assisted Persia under it withdrew.

The general situation in Iran was gravely disturbed in 1932 by the sudden termination by the Iran Government of the Anglo-Iran Oil Co.'s concession, a matter affecting one of the biggest industrial undertakings in the world and millions sterling of capital. The intervention of the British Government led to the reference of the trouble to the League of Nations and this paved the way for negotiations between the Company and the Iran Government. While these were being settled some progress was also made with general negotiations between the British and Iran Governments for an agreement covering all outstanding points of difficulty between them.

In July, 1941, Britain drew the attention of the Iranian Government to the danger of allowing German tourists in their country. A large number of German technicians and camouflaged agents had been infiltrating into Iran. The Iran Government's reply being unsatisfactory, the British and Soviet representatives made a new *demarche* to Iran in August, 1941, without any result. On one point, however, the Government of Iran made some concession to British feelings, that of restraining the activities of Rashid Ali and his supporters from Iraq who had been actively consorting with Axis representatives. The British and Russian *demarche* requested the expulsion of Germans from Iran.

On the Iran Government's failure to do so in August, 1941, the British and Soviet Governments decided to take action. The Soviet Government in their note to Iran pointed out that they found themselves confronted with the necessity of taking immediate steps and exercising their right by virtue of paragraph 6 of the 1921 treaty in the form of sending troops to Iranian territory for temporary occupation in order to safeguard the security of the Soviet. It assured the Iran Government that those measures were not in any way directed towards Iran. The Soviet

had no territorial desire nor any intention of infringing the independence of Iran. The note also assured the Iran Government that as soon as the danger threatening them was past the Soviet Government, in obedience to the obligations undertaken in the 1921 treaty, would withdraw their forces from Iranian territory. The British Ambassador in Teheran presented a similar note simultaneously.

Following on the Allied plan of action British and Indian forces entered Iran at three points. The Soviet troops entered from the Caucasus. The Allied forces met with a slight resistance at first but on August 28th, 1941, the Iran Government issued to their forces an order to cease fire, a new Cabinet being formed under the Prime Ministership of Mr. Ali Farnghli. It entered into negotiations with the Allies and concluded peace. One of the clauses of the peace terms was that the Iranians should facilitate the transit of supplies and war materials to Russia. Iran agreed to the closing of German, Italian, Rumanian and Hungarian Legations. Further, German nationals were handed over to the Allies. The terms also included the withdrawal of the Iranian troops from certain zones. In September, 1941, the Shah of Iran, Reza Shah Pahlvi abdicated in favour of the Crown Prince, Shahpur. Reza Shah Pahlvi died in July 1944.

All through the War Persia was a life-line in the communication of the Western Allies with Russia. After the War differences between America and England on the one hand and Russia on the other broke out chiefly on the question of oil. America and England appear to be pursuing a common policy in this regard. Briefly the Russian demand on Persia is that Persia should fulfil the provisions of the treaty which she has signed with Russia in regard to oil rights. In effect Russia is demanding the same rights in north Persia as those which she claims the Anglo-Americans are enjoying in the south. Two incidents in this triangular struggle were the starting of an autonomous movement in the border region of Azerbaijan in the north and the resignation of a Prime Minister (Ghavam-e-Saltaneh). The whole question is still hanging fire. Of late however there have been signs that Persia is striking out an independent line in international politics.

Both India and Pakistan have embassies in Iran.

AFGHANISTAN

The relations of Afghanistan with the Indian Empire were for long dominated by one main consideration—the relation of Afghanistan to a Russian invasion of India. All other considerations were of secondary importance. For nearly three-quarters of a century the attitude of Great Britain towards successive Amirs has been dictated by this one factor. It was in order to prevent Afghanistan from coming under the influence of Russia that the first Afghan War of 1838 was fought—the most melancholy episode in Indian frontier history. It was because a Russian envoy was received at Kabul whilst the British representative was turned back at Ali Masjid that the Afghan War of 1878 was waged. After that the whole end of British policy toward Afghanistan was to build up a strong independent State, friendly to Britain, which would act as a buffer against Russia, and so to order our frontier policy that we should be in a position to move large forces up, if necessary, to support the Afghans in resisting aggression.

GATE-WAYS TO PAKISTAN

A knowledge of the trans-frontier geography of the sub-continent brought home to the administrators the conviction that there were only two main gate-ways to Pakistan—through Afghanistan, the historic route to India, along which successive invasions have poured, and by way of Seistan. It was the purpose of British policy to close them, and of Russia to endeavour to keep them at any rate half open.

To this end, having pushed her trans-Persian railway to Samarkand, Russia thrust a military line from Merv to the Kushkinsky Post, where railway material is collected for its immediate prolongation to Herat. Later, she connected the trans-Siberian railway with the trans-Caucasian system, by the Orenburg-Tashkent line, thus bringing Central Asia into direct touch with her European magazines.

Nor was Great Britain idle. A great military station was created at Quetta. This was connected with the Indian railway system by lines of railway which climb to the Quetta plateau by the Bolan Pass and through the Chappar Rift. From Quetta the line has been carried by the Khojak tunnel through the Khyber Amran Range, until it leads out to the Afghan Border at New Chaman, where it opens on the route to Kandahar. The whole of Baluchistan was also brought under British control. Quetta is thus one of the great strategic positions of the world, and nothing has been left undone which modern military science can achieve to add to its natural strength. In the opinion of many military authorities it should firmly close the western gate to Pakistan, either by way of Kandahar, or by the direct route through Seistan.

Further east, the first railway system was carried to Jamrud and by 1925 up the Khyber Pass to Landi Kotal and down the other side of the Pass to Landi Khana on the Afghan Frontier. A first-class military road, sometimes double, sometimes treble, also threads the Pass to an advanced post at Landi Kotal, and then descends until it meets the Afghan Frontier at Landi Khana. In this wise, to continue the story, the two Powers prepared for the great conflict which was to be fought on the Kandahar-Ghazni-Kabul line.

RELATIONS WITH SUB-CONTINENT

Between the advanced posts on either side stands the Kingdom of Afghanistan. The end of British policy was to make it strong and friendly. In the first particular it largely succeeded. The second aim may also be said to have been attained. When Abdurrahman was invited to ascend the throne, none realised his great qualities. Previously the Amir of Afghanistan had been the chief of a confederacy of clans. Abdurrahman made himself master in his own kingdom. Aided by a British subsidy of twelve lakhs of rupees a year, increased to eighteen by the Durand Agreement of 1893, and subsequently to over 20 lakhs, he established a strong standing army and set up arsenals under foreign supervision to furnish it with arms and ammunition. Step by step his position was regularised. The Anglo-Russian Boundary Commission, which nearly precipitated war over the Peshawar episode in 1886, determined the northern boundaries. The Pamirs Agreement delimited the borders amid those snowy heights. The Durand Agreement settled the border on the British side, except for a small section to the west of the Khyber, which remained a fruitful source of trouble between Afghanistan and Britain until 1919, when the Afghan claims and action upon the undemarcated section led to war. That section was finally surveyed and the frontier determined shortly after the conclusion of peace with Afghanistan. Finally the McMahon award closed the old feud with Persia over the distribution of the waters of the Helmand in Seistan. This frontier was later reaffirmed by a Turkish boundary commission appointed by Iran and Afghanistan conjointly.

It was estimated by competent authorities that about the time of Abdurrahman's death, Afghanistan was in a position to place in the field, in the event of war, one hundred thousand well-armed regular and irregular troops, together with two hundred thousand tribal levies, and to leave fifty thousand regular and irregular and a hundred thousand levies to maintain order in Kabul and the provinces. But if Afghanistan was made strong, it was not made friendly. Abdurrahman Khan

distrusted British policy up to the day of his death. He closed his country absolutely against all foreigners, except those who were necessary for the supervision of his arsenals and factories. He refused to accept a British Resident, on the ground that he could not protect him, and British affairs were entrusted to an Indian agent, who was in a most equivocal position. At the same time he repeatedly pressed for the right to pass by the Government of India and to establish his own representative at the Court of St. James.

FIRST WORLD WAR

These relations were markedly improved during the reign of the Amir Habibullah Khan. He visited India soon after his accession. He strengthened and consolidated his authority in Afghanistan itself. At the outset of the war he made a declaration of his complete neutrality. It is believed that he warned the Government of India that he might be forced into many equivocal acts, but that they must trust him; his reception of Turkish, Austrian and German "missions" at Kabul, at a time when British representatives were severely excluded, was open to grave misconstruction. But a fuller knowledge induced the belief that the Amir was in a position of no lateral difficulty. He had to compromise with the fanatical and anti-British elements amongst his own people, inflamed by the Turkish preaching of a Jihad, or holy Islamic war. But he committed no act of hostility; as soon as it was safe to do so he turned the members of these missions out of the kingdom. At the end of the war his policy was completely justified: he had kept Afghanistan out of the war, he had adhered to the winning side; his authority in the kingdom and in Central Asia was at its zenith.

MURDER OF THE AMIR

It is believed that if he had lived Habibullah Khan would have used this authority for a progressive policy in Afghanistan, by opening up communications and extending his engagements with India. He was courted by the representatives of Persia, and the Central Asian States as the possible rallying centre of a Central Asian Islamic confederation. At this moment he was assassinated on the 20th February 1919.

The circumstances surrounding his murder have never been fully explained, but there is strong ground for the belief that it was promoted by the reactionaries who had harassed him all his reign. Those realised that with his vindication by the war their time of reckoning had come; they anticipated it by suborning one of his aides to murder him in his sleep. His brother, Nasrullah Khan, the nominee of the fanatical element, was proclaimed Amir at Jelalabad in his stead, but public opinion in Afghanistan revolted at the idea of the brother seizing power over the corpse of the murdered man.

His sons, Hayat and Amanullah, were not disposed to waive their heritage. Amanullah was at Kabul, controlling the treasury and the arsenal and supported by the Army. Nasrullah found it impossible to make headway against him and withdrew.

The new Amir, Amanullah, at once communicated his accession to the Government of India and proclaimed his desire to adhere to the traditional policy of friendship. But his difficulties multiplied; he had to deal with the war party in Afghanistan; he was confronted with the dissatisfaction arising from the manner in which the murderers of Habibullah had been dealt with; the fanatical element was exasperated by the imprisonment of Nasrullah; and the Army was so incensed that it had to be removed from Kabul and given occupation to divert its thoughts.

A further element of complexity was introduced by the political situation in India. The agitation against the Rowlett Act was at its height. Disturbances in the Punjab and Gujarat had taken place. The result of all this

was to convince the Amir that the real solution of his difficulties was to unite all the disturbing elements in a war with the British. His troops were set in motion and simultaneously a stream of anti-British propaganda commenced to flow from Kabul and open intrigue was started with the Frontier tribes, on whom the Afghans placed their chief reliance.

Speedy Defeat.—The war caught the Army in India in the throes of demobilisation and with a large proportion of the seasoned troops on service abroad. Nevertheless the regular Afghan Army was rapidly dealt with. Strong British forces moved up the Khyber and seized Dukka, Jelalabad was repeatedly bombed from the air and also Kabul. Nothing but a shortage of mechanical transport prevented the British forces from seizing Jelalabad. In ten days the Afghans were severely defeated and asked for an Armistice.

The Afghans tried to water down the conditions of the armistice, but as they were met with an uncompromising attitude they despatched representatives to a conference at Rawalpindi. On 8th August a Treaty of Peace was signed which is set out in the Indian Year Book, 1923, pp. 196-197.

It will be seen that under this Treaty the way was paved for a fresh engagement six months afterwards. During the hot weather of 1920 there were prolonged discussions at Mussoorie between Afghan Representatives and British officials under Sir Henry Dobbie. These were private, but it is believed that a complete agreement was reached. Certainly after an interchange of Notes which revealed no major point of difference it was agreed that a British Mission should proceed to Kabul to arrange a definite treaty of peace. This Mission crossed the border in January 1921 and entered Kabul where a peace treaty was signed.

AFTER GREAT WAR I

Since World War I the relations between Afghanistan and Great Britain have been good. The main object of the Afghan government was to strengthen the resources of the country and to bring it into closer relation with modern methods of administration. But Afghanistan is an intensely conservative country and no changes are popular; especially violent was the opposition to a secular form of administration and education.

The direct result was a formidable rebellion of Mangals and Zadran in the Southern Provinces, and serious reverses to the regular troops sent against the rebels. At one time the position was serious, but the rebels were not sufficiently united to develop their successes, and with the aid of aeroplanes and other assistance afforded by the Government of India the insurrection was broken. Whilst this assistance was appreciated, the whole business gave a serious set-back to the reforms initiated by the Amir; he had to withdraw almost the whole of his administrative code and to revert to the Mahomedan Law which was previously in force.

Soviet Penetration.—Taking a long view a much more notable development of the policies of Afghanistan, at the period to which the foregoing notes apply, was the penetration of the Russians, who had converted the former Trans-Caspian States of Tsarist Russia into Soviet Republics. The object of this policy was gradually to sweep into the Soviet system the outlying provinces of Persia, of China and of Afghanistan. In Persia this policy was foiled by the vigour of the Sipah Salah, Reza Khan. In Chinese Turkestan it was pursued with qualified success. In Afghanistan it also made certain progress.

The first step of the Russians was to extend the Soviet Republics of Tajikistan, Uzbekia and Turkmenistan so as to absorb all Northern Afghanistan. This was later, apparently, abandoned for a more gentle penetration. Large subsidies, mostly delivered in kind, were given to Afghanistan. Telegraph

lines were erected all over the country; roads were constructed, large quantities of arms and ammunition were supplied, whilst an air force with Russian pilots and mechanics was created and was largely developed. In return the Russians received important trading facilities.

RUSSO-AFGHAN TREATY

Outwardly the relations between the two States were friendly. In December 1926 the Afghan papers published the text of a new treaty concluded with Soviet Russia, which was signed on August 31st, but it provided that it should in no way interfere with the secret treaty signed in Moscow on February 28th, 1921. The principal clauses of this treaty, as disclosed in the Afghan papers, were as follows:—

Clause 1.—In the event of war or hostile action between one of the contracting parties and a third power or powers, the other contracting party will observe neutrality in respect of the first contracting party.

Clause 2.—Both the contracting parties agree to abstain from mutual aggression, the one against the other. Within their own dominions and they will do nothing which may cause political or military harm to the other party. The contracting parties particularly agree not to make alliances or political and military agreements with any one or more other powers against each other. Each will also abstain from joining any boycott or financial or economic blockade organised against the other party. Besides this in case the attitude of a third power or powers is hostile towards one of the contracting parties, the other contracting party will not help such hostile policy, and, further, will prohibit the execution of such policy and hostile actions and measures within its dominions.

Clause 3.—The high contracting parties acknowledge one another's Government as rightful and independent. They agree to abstain from all sorts of armed or unarmed interference in one another's internal affairs. They will decidedly neither join nor help any one or more other power, which interfere in or against one of the contracting Governments. None of the contracting parties will permit in its dominions the formation or existence of societies and the activities of individuals whose object is to gather armed force with a view to injuring the other's Independence, or otherwise such activities will be checked. Similarly, neither of the contracting parties will allow armed forces, arms, ammunition, or other war material, meant to be used against the other contracting party to pass through its dominions.

THE KING'S TOUR

In the closing months of 1927 King Amanullah, accompanied by the Queen and a staff of officials, commenced a long tour of India and Europe. King Amanullah, when he set out, was warmly received in India and greeted a great popular greeting. In Bombay both from his co-religionists and from members of other communities. He then took ship for Europe. He was the guest of His Majesty King George V in London, and visited the principal European capitals. He made a State visit to Turkey, and returned to Afghanistan by way of Soviet Russia and Persia. A series of treaties with the governments of the countries visited was announced and the King returned to Kabul in the late summer of 1928, the tour having been unclouded by any untoward incident. Afghanistan was peaceful during his long absence.

Reforming Zeal.—King Amanullah returned to his realm full of reforming zeal. He was much impressed by the political and social institutions of the western lands he visited, and in particular by the dramatic forcefulness with which Mustafa Kemal Pasha had driven Turkey along the path of "reform". In this he was encouraged by the Queen, who was desirous of seeing the women of Afghanistan enjoy some of the freedom and opportunity won by and for the women of the West.

Edict after edict was issued, changing the whole structure of Afghan society. New codes and taxes were imposed; it was proposed that women should emerge from their seclusion and doff the veil; the co-education of boys and girls was prescribed; in September Government officials were forbidden to practise polygamy; in October European dress was ordered for the people of Kabul. At the same time, the pay of the regular troops fell into arrears.

With every appreciation of the spirit and wisdom of these changes, friends of the King advised him to moderate the pace. They reminded him that in 1924 far less drastic changes had brought serious trouble in their train.

In May of that year the "Lame Mullah" raised the standard of rebellion amongst the Ghilzai and Mangal elements of Khost. The Mullahs were openly active against the King and he was equally frank in his hostility to them. Possibly also well-wishers suggested that what was possible in Turkey, after centuries of close contact with the West, and where the ground had been prepared by missionary effort and a long struggle for the emancipation of women, might be less easy in Afghanistan, where there had been no contact with the western world.

A CHANGE OF KINGS

Events moved rapidly in 1929. A notorious north Afghan *budmash*, Bacha-i-Saqao, raised the standard of revolt and inflicted severe losses on the Afghan Regular troops, disoriented as they were by arrears of pay. Day by day the Afghan representatives in various parts of the world issued messages asserting that the rebels had been destroyed, and a rapid series of pronouncements declared the withdrawal of all the reforms and the establishment of a Council of Provincial Representatives. Communications with the outer world were broken.

King Amanullah and his family fled from Kabul to Kandahar and then from Kandahar via Quetta to Bombay where they took ship for Europe. King Amanullah on his arrival at Rome entered into possession of the Afghan Legation, where he remained.

Bacha-i-Saqao declared himself King of Afghanistan, and for a few months held his position in Kabul. Without money, administrative experience or a disciplined following his throne was a thorny one and he was harassed by constant attacks. The Royal Air Force in India meanwhile went to the rescue of the British Nationals beleaguered in and around Kabul and in a series of brilliant flights evacuated all.

The most formidable of the new king's adversaries were led by General Nadir Khan, a son of the old ruling house, with a wide knowledge of the world. Heavy fighting took place. Fortunes varied. Nadir Khan almost gave up his chances as finally lost. But a band of Wazirs from the British side of the border attracted by prospects of loot, joined Nadir and finally seized Kabul in his name and interest. Nadir Khan thus became victor and shortly afterwards, at the wish of the Afghans, Bacha-i-Saqao was executed with other rebels, and when the year closed Nadir Khan was to all seeming in firm possession of the Kingdom.

He despatched members of his family to the principal Afghan Legations in Europe. A Shiwarz rising near the exit from the Khyber Pass took place. In February 1930, and was repressed with unexpected success and vigour. There followed a serious rebellion in Kohldaman, Bacha-i-Saqao's country. This also was promptly quelled. And thereafter Nadir Shah ruled without challenge. He devoted himself to the reorganisation of his Army. England was strictly neutral during the successive stages of the revolution, but promised support to Afghanistan to help her maintain internal peace when she had restored it and this promise was fulfilled by the

provision of an interest free loan of £200,000 to King Nadir and by the supply of rifles and ammunition to him. He gave ample evidence of his friendliness towards Britain and India. The trade routes were reopened and the new King again took up Amanullah's mantle of reform but in a statesman-like manner which carried the Mullahs along with him.

MURDER OF NADIR SHAH

This ordered march of progress was tragically interrupted by the murder of Nadir Shah on 8 November 1933. The king was attending a football tournament prize-giving when a young man among the gathering stepped forward and fired several revolver shots at him at close range, killing him instantly. It later appeared that the assassin committed the crime in revenge for the execution of a prominent Afghan who had been caught deeply involved in treasonable activities after he had been mercifully treated for earlier behaviour of the same kind. The assassin's father was stated to have been this man's servant.

The murder was not followed by general or widespread disorder. The members of Nadir Shah's family and his prominent officers of State stood loyally by his heir, his son, Muhammad Zahir. The latter was duly placed on his father's throne and his accession was in due course acknowledged and celebrated throughout the kingdom in the traditional manner.

The new King started his reign with a high reputation for courage and steadiness. He early issued assurances to his people that he would continue the policy of his father in affairs of State. No untoward events have occurred in the years that have since passed during which the young king has by his sincerity and good government gradually strengthened his position on the throne and, by the development of communications and trade, done much to encourage the establishment of settled conditions among his people.

A mutual desire for close relations and particularly economic understanding led in 1938 to exploratory negotiations between India and Afghanistan with a view to seeking some form of trade agreement.

All the great European Powers maintain Embassies or Legations in Kabul, and it must be recorded of the present Afghan Government that in tune with the ideas of its predecessors and in the interest of their continued independence as they see it, they have pursued a policy of balance in their relations with the Powers, but with careful adjustments.

The Governments of Pakistan and Afghanistan have exchanged ambassadors. The Pakistan Ambassador in Kabul is Mr. I. I. Chundrigar.

RAILWAYS FROM WEST

The prospect of linking Europe and Asia by a railway running eastwards through Asia Minor has fascinated men's minds for generations. The plans suggested have, owing to the British connection with the Indian sub-continent, always lain in the direction of lines approaching Pakistan. More than 50 years ago a Select Committee of the British House of Commons sat for two years to consider the question of a Euphrates Valley railway. The Shah of Persia applied to the British Foreign Office for the investment of British capital in Persian railway construction many years before the end of the nineteenth century. A proposal was put forward in 1895 for a line of 1,000 miles from Cairo and Port Said to Kowet, at the head of the Persian Gulf. While these projects were in the air, German enterprise stepped in and made a small beginning by constructing the Anatolian railway system. Its lines start from Scutari, on the southern shore of the Bosphorus, opposite Constantinople, and serve the extreme western end of Asia Minor. And upon this foundation was based the Turkish concession to Germany to build the Baghdad Railway.

Meanwhile, Russia was pushing her railway from various directions into the Central Asian territory running along the northern frontiers of Persia and Afghanistan to the borders of Chinese Turkestan. The construction of a Trans-Persian railway, connecting the Indian sub-continent, across Persia, with the Russian lines between the Black Sea and the Caspian Sea came to the forefront after the conclusion of the historic Anglo-Russian agreement regarding Persia in the first decade of the present century.

The Germans pushed forward their Baghdad railway project with a calculating shrewdness arising from their estimate of the value it would possess in their aim to overthrow the British Empire. The outbreak of the First World War and the success of the Germans in invading Turkey into it saw the final stages of the construction of the railway pressed forward with passionate energy. Thus, before the overthrow of the Turks and Germans in Asia Minor and of the Germans in France the railway was completed and was in use from Scutari across Anatolia, over the Taurus Mountains to Aleppo and thence eastward across the Euphrates to a point between Nisibin and Mosul. The Germans had also by that time constructed a line to Baghdad at the eastern end of the route, northwards from Baghdad to a point a considerable distance beyond Samarra.

The war compelled the British to undertake considerable railway development northward from Basra, the port at the mouth of the Shat-el-Arab, the broad stream in which the Tigris and Euphrates, after their junction, flow into the head of the Persian Gulf. The system consists of a metre-gauge line from Basra via Nahr-el-Bihar, on the Euphrates, thence northwards to Baghdad, the line passing a considerable distance westward to Kut-i-Amara, of historic fame. From Baghdad the line runs eastward approximately to the foot of the pass through which the Persian road crosses the frontier of that country. A line branches off in the neighbourhood of Kifri in the direction of Mosul. It has for some time been open as far as Kirkuk, 200 miles northward of Baghdad and 112 miles southward of Mosul.

LINKS THROUGH PERSIA

Similarly, the Taurus railway has long been open eastward of Aleppo as far as Tel Korchek, on the Syrian frontier, a few hours' motor run, north-west from Mosul. Through passenger services between Iraq and Istanbul are run, a road motor service is linking the railway termini at Kirkuk and Tel Korchek. The gap in the railway has now been closed, and through communication was established at the end of 1910. A line also runs westward from Baghdad to Feilja, on the Euphrates.

The Trans-Persian line to join the Russian Caucasian system and the Pakistan railways first assumed proportions of practical importance in the winter of 1911. Both the Russian and the Pakistan railway systems were by then well developed up to the points likely to be the termini of a Trans-Persian line. The Russian system reached Julfa, on the Russo-Persian frontier in the Caucasus. During the First World War this line was carried thence southward into the region east and south-east of Lake Urmia. The Pakistan railway system, on the borderland of Pakistan and Persia, was similarly much extended and improved during the war. A new agreement which was negotiated between England and Persia specially provided for British assistance in the development of Persian natural resources and particularly for the extension and improvement of Persian roads suitable for motor traffic but the agreement came to naught.

A railway connection between the Pakistan and the Russian systems seems assumed considerable importance after the German attack on Russia and the alignment of Britain, India and Russia along with other democracies like China and U.S.A. against Germany and

Japan. With the whole of the European west coast under German control or domination and the eastern shores of Siberia rendered unapproachable by the Japanese, the only route which British and Indian supplies to Soviet Russia could take was via Iran. The Quetta-Nuski line which had been extended during the First Great War upto Duzdarp (or

Zahidan) in Persia had been put out of use afterwards beyond Nok-kundi. This was again set in order.

There also remains the possibility of linking the Russian and Pakistan railway systems by way of Afghanistan. The suggestion has often been made that the Russian line from Merv to Herat, on the northern frontier of Afghanistan

should be linked to the Pakistan line which proceeds from Quetta to the Afghan border at Chaman. The completion of a broad-gauge line extending the Pakistan railway system through the Khyber Pass to Landi Khana at its western extremity, opens a prospect of further possible rail connections with Afghanistan.

SCOUTING

(GENERAL HEADQUARTERS: 119, Intelligence School, New Queen's Road, Karachi 2.)

THE Pakistan Boy Scouts Association was registered with the International Scout Bureau on the 7th April, 1948.

The Official Organ of the Pakistan Boy Scouts Association is the 'Pak Scout' monthly, the first issue of which appeared in September, 1948.

The Association has also published an illustrated pamphlet entitled "Our National Flag" with a foreword from the present Chief Scout of Pakistan. The pamphlet has a very wide circulation and has been universally appreciated. The Pakistan Boy Scouts Association has also published a Scout Diary for 1949-50.

During this short period the General Headquarters of the Pakistan Boy Scouts Association has been able to set up a Scout Shop dealing with uniforms and Scout gear in general.

ORGANISATION

Chief Scout, His Excellency Ali Haj Khwaja Nazimuddin, Governor-General of Pakistan
Chief Commissioner, the Hon'ble Mr. Fazlur Rahman.

Senior Deputy Chief Commissioner, Professor A.B.A. Haleem.

Deputy Chief Commissioner (Finance), Professor M. A. Iqbal.

Deputy Chief Commissioner (Headquarters)—J. Nusserwanjee Mehta.

Treasurer, Captain A. T. Sheikh.

Deputy Camp Chiefs, Sq.-Leader, H. U. Bhatti; Captain M. H. Kazmi.

Honorary General Secretary, J. D. Shuja, M.R.C.V.S.

Honorary Editor, Mir M. Mohsin, F.R.S.

Honorary Librarian and Badge Secretary, M. R. Khawar.

PROVINCIAL AND STATE HEADQUARTERS

(i) West Punjab: Mountbatten Park, Walton, via Lahore Cantt.

Provincial Commissioner, M. A. Hashmi, M.A., M.E.D.

Provincial Secretary, Ch. Mohd. Latif, B.A., D.P.E.

(ii) East Bengal: C/o Education Directorate, Ramna, Dacca, E. Bengal.

Asst. Provincial Commissioner, A. M. Sallimullah.

Provincial Secretary, A. F. M. Abdul Haq.

(iii) Sind & Karachi: Strachen Road, near Y.M.C.A., Karachi.

Provincial Commissioner, Captain A. T. Sheikh, M.B.S.

Provincial Secretary, M. I. Siddiqi.

(iv) N.-W. F. P.: C/o Education Department, Peshawar Cantt.

Provincial Commissioner, M. A. K. Khattak, M.A., Bar-at-Law.

Provincial Secretary, Mohammad Sarwar Khan.

(v) Baluchistan: C/o Education Department, Quetta.

Provincial Commissioner, I. M. Khan, M.A. (Lond.).

Provincial Secretary, K. M. Sarwar.

(vi) Bahawalpur State: State Scouts Headquarters, Baghadadul-Jadid.

State Scouts Commissioner, Ali Janah Wali Ahmad Bahadur.

State Scouts Secretary, Lt. S. Bedi.

(vii) Khairpur State: State Scouts Headquarters, Khairpur-Mir.

State Scouts Commissioner, A. J. Baloch.

State Scouts Secretary, Abdur Rehman.

GENESIS

On partition the Dominion of Pakistan was faced with many problems which demanded attention. Representative Scouts from the undivided India had gone to attend the World Jamboree at Molsson near Paris and on the 16th August, 1947, fluttered in the sky the national flag of the different countries of the world. While the flag of the undivided India was up in the air, the Muslim Scouts did not know how to represent the new Dominion of Pakistan. Fortunately someone had read in the local papers about the Pakistan National Flag which had been devised and they proceeded to improvise the new Pakistan Flag as the Scouts often do, with a piece of their green turban and an arm of their white shirt. This flag was accepted and rose up amidst the applause of the crowd. This was the official beginning of the Pakistan Boy Scout Association at the first World Jamboree in France.

On their return to Pakistan the Scouts were received by the late Quaid-e-Azam Mohammad Ali Jinnah, the first Governor-General of Pakistan who entertained them to tea and joined them in their group photograph. The Quaid-e-Azam had always included character building in the immediate programme of national reconstruction. Addressing the Scouts on the occasion he said:

"If we are to build a safer, cleaner and happier world, let us start with the individual, catch him young and inculcate in him the Scout Motto of Service before Self, and purity in thought, word and deed."

In December, 1947, the first conference of officials and non-officials interested in the Movement was held at Karachi. The Quaid-e-Azam was requested to become the first Chief Scout of Pakistan, the Hon'ble Mr. Fazlur Rahman the Chief Commissioner while Mr. J. D. Shuja was appointed as Honorary General Secretary.

The Scout badge of Pakistan has a superimposed Crescent and Star, with two side-stars, representing East and West Pakistan. The Scout Motto "Be Prepared" has been translated as "Al-Mustaid", for adoption in Pakistan. Three special Scout awards have been instituted:-

(i) *The Silver Camel* which corresponds to Silver Wolf in Britain, Silver Elephant in India and Silver Buffalo in U.S.A. It is the highest award granted for Service of the most exceptional character.

(ii) *The Silver Palm*. It has deep religious significance and is an award for long and special distinguished service. This award corresponds with the Silver Acorn in Britain.

(iii) In memory of the first Chief Scout and the Founder of the Boy Scout Movement in Pakistan the *Jinnah Scout Badge* has been instituted. This badge will be awarded for striking high character, devotion to duty, together with great courage, endurance or gallantry. It will be composed of the word Jinnah in Arabic script, with the Pakistan fleur-de-lis superimposed on it.

The Pakistan Boy Scouts Association was represented at the International Commissioner Conference at Kinderstag and International Youth Conference in London, by Mr. Qureshi Iqbal in July, 1948.

A Pakistan contingent of 20 Boy Scouts went to the Pan-Pacific Jamboree, held in Australia from the 30th December, 1948 to the 9th January, 1949, under the leadership of Mr. J. D. Shuja, Honorary General Secretary. As no sea passage was available, the boys reached Australia in a specially chartered aeroplane. The expenditure was mostly borne by public contribution. The contingent created a very good impression in Australia and proved to be a veritable ambassador of peace and goodwill. Our Scouts had a splendid opportunity for fraternisation with the Scouts of other nations en route and at the Jamboree and besides sight-seeing each member also underwent a course of vocational training for 6 weeks in animal husbandry, agriculture and allied trades, banking, commerce, etc.

REFUGEES

THE Ministry of Refugees was established early in September, 1947, but long before that date, and even before August 15, the movement of Muslim refugees from the Amritsar District to Pakistan had started, as a result of communal disturbances in that area. Immediately following Partition the area and the scope of these communal disturbances in East Punjab increased with astonishing rapidity and quickly enveloped the Gurdaspur and Hoshiarpur districts. It is estimated that by August 23, some 7-8 lakhs of Muslim refugees had been compelled to leave the three districts named and also from other districts of the Jullundur Division of East Punjab. On August 27, a Refugee Commissioner for Pakistan was appointed, and on the 28th of August the M.E.O. (Pakistan) (followed soon after by the parallel Indian Organisation) was set up to co-ordinate and control what had by this time become an accepted and inevitable exodus of Muslims from the Jullundur Division of East Punjab.

M.E.O. (Pakistan) was established with its headquarters at Lahore, M.E.O. (India) originally had its headquarters at Amritsar but in September, 1947, it became clear that only the closest co-operation between these two parallel organisations could achieve the desired results and M.E.O. (India) agreed to set up its tactical headquarters with M.E.O. (Pakistan) at the Residency, Lahore.

Both the M.E.O.'s had liaison agencies in each district of the East and West Punjab respectively. In October, 1947, M.E.O. (Pakistan) set up its tactical headquarters in Jullundur.

PAKISTAN-PUNJAB REFUGEES COUNCIL

As is clear from what has been said above the problem was becoming more and more serious and was quite obviously going beyond the capacity of the West Punjab Government. Accordingly in the second week of September a Refugees Ministry was established in Karachi, and by the end of that month it became clear that something more was necessary. Proposals were considered for the movement of the Ministry to Lahore and for the formation of a body which could co-ordinate the work of the Centre and the Province most concerned, namely West Punjab.

By the middle of October a Pakistan-Punjab Council was set up and one of the first tasks of this organisation was the planning of a joint military evacuation scheme in co-operation with the M.E.O.'s of both the Dominions. This plan was put into operation on October 20. This is an important date as from now onwards a fairly accurate record of the actual number moved on either side was kept.

By the end of October it was decided to move the Headquarters of the Ministry to Lahore and it was soon after this date that the work of evacuation reached its peak.

EVACUATION FROM EAST PUNJAB

Some account of the actual work done is necessary. The total number of Muslim refugees moved by M.E.O. (Pak.) up to 26th April, 1948, is 36-77 lakhs. The actual number of Muslim refugees who have entered the West Punjab upto March 10, 1948 according to the West Punjab Refugees Census is, however, 54,86,979 but this number includes many refugees who made their own way across the inter-Dominion border, and over two lakhs of refugees from Jammu and Kashmir. The period during which the greatest movement occurred was from September to December, 1947, both months inclusive. In all, up to date M.E.O. (Pakistan) has organised 226 trains from Pakistan to India, and 211 trains from India to Pakistan. In addition no less than 204 trains have been run for the dispersal of refugees within West Pakistan itself, though of these some have also carried non-Muslim evacuees on the return journey to Lahore and elsewhere.

As will be seen from what has been said above this work could not possibly have been done by the West Punjab Government alone, or by a Central Refugees Ministry working through that Government, without the Joint Organization which was set up to deal with the problem. These remarks apply also to the other activities of the Refugees Council, such as the work of recovery of abducted women and converted persons, the exchange of property problem, etc.

An effort was made to move considerable bodies of refugees to Sind in order to ease West Punjab's Rehabilitation Problem. This was only partially successful as the authorities in Sind had not evolved a definite policy for the re-settlement of refugees in that province. Nevertheless over half a lakh refugees were moved to Sind and reasonably satisfactorily settled.

ABDUCTED WOMEN AND CONVERTS

Another very important activity which is still being vigorously continued is the work for the recovery of abducted persons and converts. As the movement of refugees continued over a period of weeks and months it became increasingly clear that large numbers of women and children had been left behind on either side. An inter-Dominion Conference was therefore called on December the 6th and it was decided that the work of rescuing these women and children and also evacuating converts from "pockets" should be carried out in right earnest. Special organizations were therefore set up for this purpose and upto date about 8,000 Muslim women have been recovered and approximately 5,000 non-Muslim women, including those recovered from the Azad Kashmir Government's territory, have been transferred to India. Another very important function of the Council was the supervision and administration of refugee camps.

REFUGEE CAMPS

The Walton group of refugee camps were the first to be opened in West Punjab to accommodate the stream of refugees which began to pour into Lahore after 10th August, 1947. Side by side with these, a large number of refugee and evacuee camps were opened up by Deputy Commissioners, as refugees poured into different parts of West Punjab or as evacuees decided to depart. Certain other important camps on the foot convey routes at Wagah, Kasur, Shahdara, Model Town and Sulemanki were also taken under the direct administration of the Council. With the Boy Scouts Headquarters staff forming the nucleus, arrangements were soon made for the provision of adequate trained staff. A scheme of camps management was drawn up giving detailed instructions for the treatment of refugees at each stage of their sojourn in camps from the time of entry to that of departure, providing especially for Reception, Rations and clothing issues, census, information. Recording of complaints of abduction and loss of property, etc.

RATIONS

Special attention was paid throughout to ensure satisfactory food arrangements, in view of the fact that refugees generally arrived in a starved condition. The refugee cereal ration has been maintained at the same level as in rationed towns except for the substitution of rice for wheat (owing to the wheat shortage after January) on six out of the seven days in the week. Food for 10,000 people was always kept ready at Walton, for example so long as it was the main transit camp. Fodder was also provided for cattle owned by refugees on the scale of 8 seers choosa and 2 seers of cotton-seed or gram as approved by the Veterinary Department.

MEDICAL ARRANGEMENTS

In view of the fact that a very high proportion of refugees were wounded, exhausted or diseased, the indoor accommodation of 800 odd beds at

the Lahore Hospital proved totally insufficient. No time was, however, lost in expanding facilities rapidly with the result that by November, 1947, the number of beds for indoor patients at Lahore rose to 4,500. The assistance received from the British Red Cross, the Friends Unit, and the Christian Committee for Relief proved extremely valuable, especially over the provision of medical staff. Public Health arrangements were also improved in the face of great handicaps, especially lack of sweepers and periodic shortage of cholera vaccine. The results well repaid the effort in that the daily death rate among first arrivals in Pakistan in foot convoys was reduced from 1 per 300 to 1 per 1,000 during the first 2 days, 1 per 2,000 after the 4th day and 1 per 3,000 to 8,000 in the centrally managed camps when fresh arrivals were not taking place in any large numbers.

About 17 lakh more refugees entered West Punjab than left it. As time went on, lands, factories and shops available for absorbing new arrivals began to diminish and the camps, from being transit camps, gradually became static camps. The great food shortage after January 1948, which affected, "surplus" and "deficit" districts and towns and villages alike hampered efforts at resettlement. The population of refugee camps in West Punjab has consequently remained stationary at between 7 and 8 lakhs, more than half of which are in the centrally managed camps at Lahore. Besides the refugees in camps, there are some 3 lakh unrelieved refugees in the rural areas who were billeted there during the winter for shelter. These have obtained temporary employment in the harvesting operations and it is hoped will be absorbed in the economy of the rural areas. The arrival of the Rabi harvest gave a fillip to the resettlement of refugees on land and the Lahore camps registered a 25 per cent fall in number. There are reasons to believe that the progress of resettlement in other districts is taking place at about the same rate, and if all goes well the camp population should be 6 lakhs the same as assumed in the budget estimates. Further reductions in the camp population will not be easy unless refugees co-operate with the Administration and move to areas where lands (as in Sind) and shops (as in N.W.F.P.) are more readily available than in West Punjab.

EDUCATION AND AMENITIES

The transition to static camps has involved a re-examination of policy. Special efforts have been made under the guidance of H.E. the Governor, West Punjab, in the provision of amenities and keeping up of the morale of the refugees. Schools both for children and adults have been opened and their number is being rapidly increased. Scouting, Cubbing and Girl-Guiding have been introduced in most of the camps and the movement is gaining headway. The adults are made to drill and given physical training and all inmates of camps are given facilities for games and sports with weekly competitions between different blocks. There are schools for industrial training and provision has been made to enable those passing out of these schools to take a set of tools with them. In the evening lectures, cinema shows, song competitions, etc. are held. All these activities have gone a long way in raising the morale of the refugees. The grant of rupees eight lakhs out of the Quaid-e-Azam's Fund for this purpose has proved invaluable and has enabled the authorities to remove much of the depressing monotony and drudgery of camp life.

VOLUNTEERS FOR REFUGEE WORK

In October, 1947, H. E. The Governor, West Punjab, issued an appeal through the columns of *The Times* in London for volunteer workers who were willing to come to Pakistan to help the Administration with the refugee relief problem. At the same time an appeal was issued through Pakistan Foreign representatives in

other countries asking for assistance in the way of materials required for refugee relief, particularly clothing, blankets and medical stores.

REHABILITATION

Very soon after the arrival of the first batch of refugees in West Punjab it was felt necessary to bring all the rehabilitation activities under the control of one person. Mr. Ameen-ud-Din of the Central Pakistan Government was appointed as the first Rehabilitation Commissioner. As there was no separate Refugee Minister he carried on the work of the Department in consultation with the different Commissioners of the West Punjab Government.

When he left the West Punjab Government appointed Mr. Mueen-ud-Din as Rehabilitation Commissioner and he worked under the control of the West Punjab Minister of Refugees, a new Ministry which had first been established. There was a daily staff meeting in the morning and conference in the evening which was attended by the Pakistan Prime Minister and the Governor of the Province and most of the final decisions in rehabilitation and other refugee matters were taken after discussion at these meetings.

There was, however, considerable confusion regarding the delimitation of functions between the various Ministers of the West Punjab Government, as the Minister in charge of the Industries portfolio insisted upon dealing with everything that concerned abandoned industrial undertakings; the Minister for Revenue had to be consulted on all questions of abandoned lands and in many matters proposals for rehabilitation were initiated and final decisions taken by him.

Abandoned evacuee property was a standing temptation and political considerations often prevented action being taken, whenever such property had been irregularly occupied. In allocating houses and especially factories it was found to be very difficult to reconcile the interests of refugees with those of local claimants.

Mention should also be made of the Custodian of Evacuee property. The need for the appointment of this office became apparent as soon as the Central Ministry for Refugees moved to Lahore, and the first Custodian was appointed at their instance shortly before the Refugee Council came into existence. An Ordinance dealing with protection of evacuee property was one of the first major achievements of the Refugee Council; this Ordinance has been the model for all subsequent legislation on the subject in Pakistan.

PLANNING

The allocation of the assets left by evacuees is nearing completion, but the Census returns have shown that it has been very difficult to persuade refugees to take up non-agricultural openings west of the Chenab, where there was very little land with non-Muslims. Planning is in hand to provide financial and other aid for enabling refugees to take up business openings in these areas.

To absorb the vast numbers of refugees who had come into West Punjab it is essential to establish new industries and openings in business apart from those left by evacuees. This work has been undertaken by five Committees set up under the different Ministers of the West Punjab Government. These Committees have to report to the Refugee Council so that this body may be kept informed of their activities.

Planning is essentially long term and if the camps are to be cleared it is essential that other provinces and states, particularly Sind, should take a fair quota of refugees. The Pakistan Punjab Refugees Council has pressed this view at the Inter-Provincial Conferences already mentioned and has urged the Government of Sind to settle a far larger quota of Punjabi Refugees on the land.

REFUGEE COUNCILS

As a result of these efforts the Pakistan-Sind Refugees Council was formed on May 17th, 1948, on the lines of the Pakistan-Punjab Refugees Council. The meetings of the Council are held at regular intervals and a Pakistan-Sind Refugees and Rehabilitation Agreement has been signed on the lines of the agreement already existing between the Government of Pakistan and West Punjab. Since the establishment of this Council the Sind Protection of Evacuees' Property Ordinance and the Sind Economic Rehabilitation Ordinance of 1948 have been submitted to the Governor-General for his sanction.

The census figures of the refugees arriving in Sind, most of whom are immigrants from Rajputana, Kathiawar and other parts of India with which there has been no agreed exchange of population, have been collected by the Sind Government. According to these figures about 7,06,783 refugees have arrived in the Province. The resettlement and rehabilitation plans of these refugees are well in hand and a Collectors' Conference was meeting at Karachi to finalise them.

A Central Refugees Advisory Committee for Sind has also been constituted with the Pakistan Minister of Refugees as its Chairman. This Council is a non-official body to advise the Central and Provincial authorities on matters concerning the welfare and rehabilitation of refugees. Rupees ten lakhs have been earmarked by the Centre for the resettlement of refugees in Sind, out of a total grant of rupees one crore and fifty lakhs allotted in the Pakistan Budget of 1948-49.

An agreement has also been arrived at between the Governments of Pakistan and the N.-W.F.P. to set up a Joint Refugees Council on the lines of the Pakistan-Punjab Refugees Council, with His Excellency the Governor; the Minister of Refugees, the Pakistan Government; the Chief Minister, N.-W.F.P.; and the Minister of Refugees, the N.-W.F.P. as its members.

It can be easily seen that very heavy work has confronted the Ministry in the matter of policy and legislation. Such work included, for instance the formation of Advisory Committees, of refugee legislation, of protection of evacuee property, a revised Social and Economic Rehabilitation Bill, arrangements for the allotment to refugees of abandoned houses, shops, factories and land. There has been a very wide range of subjects under the general head Rehabilitation, including the formation of a Rehabilitation Board and Allocation Tribunal, the appointment of Rehabilitation Commissioners for Lands, Industries, and Miscellaneous, the fixation of rents for abandoned lands, houses, cinemas, factories and shops, measures for the restoration of the economic life of West Punjab under various sub-heads such as banking, safe deposits, collieries, provision of consumer goods, restoration of road and rail services, purchase of motor transport, aid to the Technical Services Association Inc. and general restoration of trade and rural economy. In refugee matters affecting relations with India, the Ministry has dealt with the whole question of evacuee property—arrangements for evacuation by air, road and rail, legislative and administrative arrangements for the transfer of prisoners, arrangements for the recovery of abducted women and converted persons, pensions, provident funds, insurance companies, safeguarding of sacred places, payment of taxes due on abandoned property, assets and trusts of religious institutions, etc.

A very important matter to which special attention was devoted by the Ministry was the exchange of prisoners between Pakistan and India. The arrangements for the exchange of prisoners arose from negotiations between East and West Punjab Governments, and the consequential West Punjab Ordinance, since held to be *ultra vires* of the Provincial Legislature, has been the basis of the Pakistan Ordinance on the subject. A large number of prisoners have

already been exchanged but unfortunately further progress has had to be held up because of a hitch over the question of Muslim prisoners in Delhi.

EX-SERVICEMEN

The Training Scheme of the Department of Resettlement and Employment, Ministry of Law and Labour, Government of Pakistan, for Ex-servicemen, has been converted into a Training-cum-Production Scheme where the admission of civilians up to the limit of 50 per cent of the seats is permitted.

The scheme provides intensive practical training in vocational, wood-working and metal trades, extending over a period of one year.

During the first two or three months, the students are given basic training. Then they are trained in producing marketable utility articles—furniture, utensils, machines, machine-parts, electrical equipment, soaps, shoes, leather goods, handloom cloth, and so on.

During the second phase of training, the trainees are entitled to a bonus, at 25 per cent of the profit, on articles actually produced by them. Thus they can earn sufficient money to cover most of their training expenses. Technicians who want to upgrade their skill, for employment in large-scale industries, are also trained under the scheme.

The Post-war Training Schemes of the late Government of India, aimed at producing technicians for civil industries had to be re-orientated to suit Pakistan's special needs. The object was to develop the industrial potential of the country through training, to prepare a large number of highly-skilled artisans, for cottage and small-scale industries and to train basic artisans and industrial workers, as soon as new industries were established, to help the trainees in all types of cottage and small-scale industry.

PROCEDURE FOR ADMISSION

Admission to the Training Centres is made through the Employment Exchange. The following are the Training-cum-Production Centres:—N. E.D. Engineering College, Karachi; Training Centre for the War Disabled, Moghalpura, West Punjab; Vocational Training Centre, Sialkot Cantt.; Dyanand Technical Institute, Lahore; Technical Training Centre, Peshawar; Technical Training Centre, Dacca, East Bengal; and Mission Industrial School, Faridpur, East Bengal.

A student, after training, will be able to produce a number of marketable articles on a small scale. The cost of equipment for such industry is within the means of middle class people. Whenever necessary the student will be allowed to use the heavy machinery which is kept at the parent Centre. He can count on technical advice, guidance, and assistance in the purchase of raw materials or the disposal of finished goods from the Department of Resettlement and Employment.

ENCOURAGING RESULTS

To talk of the development of a Production Centre necessarily means talking in terms of years. It is, however, very gratifying that even the preliminary stage, very encouraging results have been achieved. Although Training-cum-Production Centres have not started functioning normally, during the few months of their life, the sale proceeds have gone up to Rs. 45,280 which means an income of Rs. 24,234 to the Central Government. If this Training-cum-Production Scheme succeeds, as there are reasons to believe that it will, Pakistan will give to its people a new system of education which should make them a nation of skilled artisans and industrial workers.

A TOURIST'S GUIDE

KHYBER Pass: one of the gateways into Pakistan from Afghanistan is situated 104 miles west of Peshawar in the North-West Frontier Province. The Pass is rich in historical association as it was the route by which all of the sub-continent's invaders swooped down on the inhabitants for conquest or plunder. It still remains a great highway for continental trade between India and Pakistan on the one hand and the countries of Central Asia on the other. On Tuesdays and Fridays one could see long caravans of men and camels laden with merchandise of every description passing into and from Afghanistan.

Lahore: one of the most ancient and famous cities of the sub-continent is the capital of the West Punjab Province. The city has been notable since the 11th century when Babar the first of the Moghul dynasty made it a place of royal residence, the remains of which are found in the tombs, mosques, pavilions, and pleasure gardens of the city. But, the man who laid the foundations of the city's greatness was the Emperor Akbar. Today the city is almost wholly Muslim with a population of 671,659. *Places worth a visit*: 1. Ranjit Singh's mausoleum, 2. Jehangir's and Nurjehan's tombs, 3. tomb of Asaf Khan, 4. tomb of Anarkali, 5. Gurn Arjun's Shrine, 6. Badshahi Masjid, 7. Sunday Masjid, 8. Nazir Khan's mosque, 9. Moti Masjid, 10. Minto Park, 11. Shalimar Gardens, 12. Lawrence Gardens, 13. Gulabi Bagh, 14. Museum, 15. Zoo, 16. Chahburji, 17. the fort. The chief means of conveyance are cars, taxis and hackney carriages. *Clubs*: 1. Cosmopolitan Club, 2. Gymkhana Club, 3. Punjab Association Club, 4. Y. M. C. A.

Hotels: Braganza Hotel.

Falettis Hotel; Telegrams: "Falettis," Napier Hotel.

Stille's Hotel.

Lahore is on the North Western Railway and is connected with Karachi, Delhi, Calcutta and Bombay.

Mohenjo-Daro: the ruins of Mohenjo-Daro (the Domain of the Departed) are situated eight miles by car off Dorki station on the Kotri-Larkana branch of the N. W. Railway. Indian

archaeological history dates from the 3rd century B.C. The excavated remains in Mohenjo-Daro belong to the last city, which had been built on ancient cities which are suspected generally to be lower than the water-level. Excavations of the lower strata may be expected to yield the remains of an older period.

It is a very remarkably well-planned city. All the streets were laid south to north. Nothing is more welcome to an Indian city than the south wind. Homes were two-storeyed and the staircases lead not to the lower storey but to outside. This feature is not unknown in the houses in the hills. Covered balconies or open porticoes are conspicuous by their absence. The courtyards are somewhat small.

Proximity of the dwellings points to a very crowded city. Mohenjo-Daro is a city of bricks, fire-burnt and sun-burnt. It had probably stressed more on drainage than any other ancient city. Evidence of underground drains are to be found everywhere. They are large and high and provided with manholes. The vastness of the drainage surely reflects the greatness of the upper structure, now very much lost to view. It is not known, however, whether the drains led to any common dumping place away from the city, although soak pits have been noticed, but from their size one cannot be sure that they were used as the main dumping grounds. Bathrooms are another feature significant of the cleanliness of the city.

The objects found in the remains mainly consist of seals, jewellery, potteries, figures (human and animal) and toys. The seals have on them inscribed characters of a conventionalised form of pictograph writing, which have not yet been deciphered. Most of them are of steatite and are square. The more common animal is difficult to identify. It has features both equine and bovine, with one horn only.

Murree: hill station in West Punjab, is about 40 miles from Rawalpindi and is 7,500 feet above sea-level. It lies on the main road leading into Kashmir from Pakistan. In pre-Partition days it was the summer headquarters of the Northern Command, and was a great social and

sports centre. *Places worth a visit*: 1. Kashmir Point, 2. Panch Pandu Park, and 3. Pindi Point. The Himalayan views are an additional attraction. The chief means of conveyance are rickshaws, dandies, horses and buses. *Clubs*: 1. Mountain View Club, 2. Rawalpindi Club.

Hotels: Brightlands Hotel.

Cecil Hotel; Telegrams "Cecil."

Viewforth Hotel.

From Rawalpindi the journey is usually made by car.

Taxila: seat of a famous Buddhist University in the 7th century, is situated about 20 miles north-west of Rawalpindi. The Indian name literally means stone-cut city of the Takka clan. The remains are actually of three cities within three and a half miles of each other. The epics record that Rama's brother Bharata conquered this territory and the capital took its name from his son Taksha. It is believed that the great snake-sacrifice recorded in the Mahabharata was held at Taxila.

Taxila presents historical records extending over a period of about 1,500 years, from the 4th or 5th century B.C. to the 5th century A.D. Seven different peoples ruled at Taxila. Achaemenian and Alexandrian suzerainty have left almost no records. The Mauryan records consist mainly of almost primitive punch coins (they may be of an earlier date), jewellery and lapidaries, which surely indicate that Indians were in that age the greatest masters in the treatment of the most refractory stones, and gold and silverworks of refined workmanship.

The most imposing pile at Taxila is the Dharmarajika or the Great Stupa (Stupa). It is also known as Chir (split) top, because of the cleft driven through its centre by former explorers. Around it there are a number of Stupas, Chaityas, Viharas, etc. The construction of the group extended over four centuries (2nd-5th). The original stupa was built in the Sasya Parthian period and enlargements were made in the Kusha period. The most important architectural features are trefoil arches and Erolman pillars.

Ltd., Albion Jute Mills Co. Ltd., and New Central Jute Mills Co. Ltd.; had numerous ups and downs in his career but his steadfastness and strong will power raised him to his present position; commencing

his industrial career fifteen years ago, he is today one of the biggest industrial magnates in the country; his industrial enterprises are of public benefit and utility, and his centres of activity have grown into self-sufficient towns, named after his ancestors and relations—Balmanger (Bihar), Balmipuram (South India), Dalmia-Dadri (Punjab), and Shantinagar (Karachi-Sindh); one of the biggest philanthropists of the present day, his charities include schools and other institutions such as hospitals, widows' homes, poor houses, and religious institutions being run by Dalmia Jain Charity Trusts; eats the plainest food and wears cheap and unostentatious clothing confining his personal expenses to the bare necessities of life; his connections are widespread and he is on terms of close friendship with leading politicians, religious and social leaders, etc.; a staunch Hindu, orthodox in his living and having implicit faith in his own religion, he has respectful regard for other religions; has taken up the cause of protection of cows and is now working for the realisation of his dream of "seeing one day the abolition of territorial systems, all owing allegiance to one God, speaking one language—having at least bread, clothing and shelter without discrimination, leading simple, happy contented and peaceful life, realising Supreme Bliss 'Godhead'." *Hobbies:* Study of Hindu Philosophy and propagation of Adwait. Address: Dalmia Jain Nivas, New Delhi.

In 1911, the Rajabhadur married the sister of the Zamindar of Bindra Nawagarh in the Raipur Dt. by whom he has a son and heir Jivendra Nath Bahadur Singh who was born on August 12, 1916. Upon the death of his first wife the Rajabhadur married a second time in 1929 and a daughter was born to him in 1930. He was a representative member of the Chamber of Princes and is at present a member of several boards in the Eastern States Union. He has travelled widely on the European Continent. The Rajabhadur ascended the *nadi* and was installed with full ruling powers in 1915. The State was formerly a dependency of Sahabpur and passed to the British by the Treaty of 1826 between the East India Company and the Maratha chief Itarshi Jhonsla. It is one of the small states in the Eastern States Agency. Gonds and Kawsars were the most numerous castes, and the whole population spoke the Chattisgarh dialect of Hindi. The administration was carried on by the Rajabhadur with the help of a Dewan and an advisory council consisting of the members of the Prajamandal, an elected body. In revenue

matters the Ruler exercised the highest jurisdiction with the aid of the Prajamandal and petty disputes were decided by village panchayats and bench magistrates appointed for the purpose. *Address*: Sakhi State.

PREM PRAKASH

(TALKIES)

SAWAI MANSINGH HIGHWAY, JAIPUR

Owned by

ZORASTER & CO.

JAIPUR

Proprietors :

Seth SOHAN MULJI GOLECHA

Seth MEHTAB CHANDJI GOLECHA

OPENED ON 16th DECEMBER 1948

It is an impressive and delightful Modern House with all modern amenities.

Lacks in no respect in comparison with the best of theatres abroad and one of the few best in India. It is installed with WESTREX MASTER W.M. 322 sound projector equipment. Every seat is a cool retreat since it is fully air-conditioned and as such the cooling doubles comfort.

J. SANTOSH & SONS

Thus spoke Bacon

"Some books are to be tasted, others to be swallowed, and some few to be chewed and digested"

Among the "few" is the fine range of practical, educational and technical books published for India by Odhams of London.

The knowledge and inspiration imparted in thousands of colleges, libraries, workshops, offices and homes where Odhams books are today being "chewed and digested" is the proud contribution to India's progress by the

A HOUSE OF QUALITY

Eastern Enterprise

For over three hundred years men of enterprise and initiative have engaged in trade with the East. For nearly a century The Chartered Bank of India, Australia and China has supplied them with the specialised banking services that this trade demands.

Today, in addition to these services, the Bank's wide network of branches ensures that a wealth of information on local needs for products and services is readily available to customers. Those planning to enter the markets of the East are cordially invited to discuss their problems with the Managers of the Bank in London, Manchester or Liverpool.

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

(Incorporated by Royal Charter 1851)

HEAD OFFICE: 38, BISHOPSGATE, LONDON, E.C.2

Manchester Branch: 52, Mosley St., Manchester 2 • Liverpool Branch: 27, Derby House, Exchange Buildings, Rumford St., Liverpool 2
West End (London) Branch: 28, Charles II St., London, S.W.1 • New York Agency: 65, Broadway, New York
Associated Banking Institution in India: The Allahabad Bank Ltd.

The Bank's branch system, under British management directed from London, serves

**INDIA • PAKISTAN • CEYLON • BURMA • SINGAPORE AND FEDERATION OF MALAYA • NORTH BORNEO AND SARAWAK • INDONESIA • FRENCH INDO-CHINA • SIAM • THE PHILIPPINE REPUBLIC
HONGKONG • CHINA • JAPAN**

Symbol of PROSPERITY

India, though politically free, is only at the beginning of her real struggle—that for economic independence. This, the bitterest battle of all, will be won or lost in mills, factories, workshops and fields. Aware of this, the J. K. Group of Industries, comprising diverse industrial and trading organizations, is pledged to work to capacity in order to accelerate the arrival of economic 'Swaraj'. As ever, the trademark of our house is your guarantee of quality.

THESE DISTINCTIVE PERCENTAGES

ARE BASED ON THE WORKING OF 191 COMPANIES

ON DECEMBER 31, 1947, THE LATEST DATE FOR WHICH RETURNS
ARE AVAILABLE, THE NATIONAL REPRESENTED THE
FOLLOWING VIS A VIS ALL INDIAN INSURERS :

- OF THE TOTAL NUMBER OF POLICIES IN FORCE—5'13%
- OF THE TOTAL SUM ASSURED IN FORCE—5'71%
- OF THE TOTAL ANNUAL PREMIUM INCOME EARNED—5'63%
- OF THE TOTAL LIFE FUND OF THE COMPANIES—5'79%

Obviously, National writes its large volume of business for a sum assured higher per policy, at a premium rate lower for the sum assured ; and has built up proportionately a higher life fund, compared to an all-India average.
